Date: March, 2011

H9 ASD Installation and Operation Manual

Document Number: 58682-003

Date: March, 2011

Introduction

Congratulations on the purchase of the new **H9 Adjustable Speed Drive**!

The **H9 Adjustable Speed Drive** (ASD) is a solid-state AC drive that features Toshiba International Corporation's (TIC) **Vector Control Algorithm** enables the motor to develop high starting torque and provide compensation for motor slip, which results in smooth, quick starts and highly efficient operation. The H9 ASD uses digitally-controlled pulse width modulation. The programmable functions may be accessed via the easy-to-use menu or via the Direct Access Numbers (see). This feature, combined with TIC's high-performance software, delivers unparalleled motor control and reliability.

The H9 ASD is a very powerful tool, yet surprisingly simple to operate. The user-friendly **Electronic Operator Interface** (EOI) of the H9 ASD has an easy-to-read LCD screen. There is also a read-only LED screen with enhanced visibility that can be read from a greater distance. The EOI provides easy access to the many monitoring and programming features of the H9 ASD.

The motor control software is menu-driven, which allows for easy access to the motor control parameters and quick changes when required.

To maximize the abilities of your new H9 ASD, a working familiarity with this manual will be required. This manual has been prepared for the ASD installer, user, and maintenance personnel. This manual may also be used as a reference guide or for training. With this in mind, use this manual to develop a system familiarity before attempting to install or operate the device.

Important Notice

The instructions contained in this manual are not intended to cover all details or variations in equipment types, nor may it provide contingency concerning the installation, operations, or maintenance of this equipment. Should additional information be required contact your TIC Sales Representative.

The contents of this manual shall not become a part of or modify any prior or existing agreement, commitment, or relationship. The sales contract contains the entire obligation of Toshiba International Corporation. The warranty contained in the contract between the parties is the sole warranty of Toshiba International Corporation and any statements contained herein do not create new warranties or modify the existing warranty.

Any electrical or mechanical modifications to this equipment without prior written consent of Toshiba International Corporation may void all warranties and may void the UL/CSA listing or other safety certifications. Unauthorized modifications may also result in a safety hazard or equipment damage.

Misuse of this equipment could result in injury and equipment damage. In no event will Toshiba International Corporation be responsible or liable for direct, indirect, special, or consequential damage or injury that may result from the misuse of this equipment.

About This Manual

This manual was written by the TIC Technical Publications Group. This group is tasked with providing technical documentation for the **H9 Adjustable Speed Drive**. Every effort has been made to provide accurate and concise information to you, our customer.

At Toshiba International Corporation we are continuously striving for better ways to meet the constantly changing needs of our customers. E-mail your comments, questions, or concerns about this publication to **Technical-Publications-Dept@tic.toshiba.com**.

Manual's Purpose and Scope

This manual provides information on how to safely install, operate, maintain, and dispose of your **H9 Adjustable Speed Drive**. The information provided in this manual is applicable to the **H9 Adjustable Speed Drive** only.

This manual provides information on the various features and functions of this powerful cost-saving device, including

- Installation,

- System operation,

- Configuration and menu options, and

- Mechanical and electrical specifications.

Included is a section on general safety instructions that describe the warning labels and symbols that are used throughout the manual. Read the manual completely before installing, operating, performing maintenance, or disposing of this equipment.

This manual and the accompanying drawings should be considered a permanent part of the equipment and should be readily available for reference and review. Dimensions shown in the manual are in metric and/or the English equivalent.

Because of our commitment to continuous improvement, Toshiba International Corporation reserves the right, without prior notice, to update information, make product changes, or to discontinue any product or service identified in this publication.

Toshiba International Corporation (TIC) shall not be liable for direct, indirect, special, or consequential damages resulting from the use of the information contained within this manual.

This manual is copyrighted. No part of this manual may be photocopied or reproduced in any form without the prior written consent of Toshiba International Corporation.

© Copyright 2011 Toshiba International Corporation.

TOSHIBA® is a registered trademark of Toshiba Corporation. All other product or trade references appearing in this manual are registered trademarks of their respective owners.

Contacting TIC's Customer Support Center

TIC's Customer Support Center can be contacted to obtain help in resolving any **Adjustable Speed Drive** system problem that you may experience or to provide application information.

The Support Center is open from 8 a.m. to 5 p.m. (CST), Monday through Friday. The Center's toll free number is US (800) 231-1412/Fax (713) 937-9349   CAN (800) 872-2192   MEX 01 (800) 527-1204. For after-hours support follow the directions in the outgoing message when calling.

You may also contact Toshiba International Corporation by writing to:

Toshiba International Corporation

13131 West Little York Road

Houston, Texas 77041-9990

Attn: ASD Product Manager.

For further information on TIC's products and services, please visit our website at www.toshiba.com/ind/.

TOSHIBA INTERNATIONAL CORPORATION

H9 Adjustable Speed Drive

Please complete the Warranty Card supplied with the H9 ASD and return it to Toshiba International Corporation by prepaid mail. This will activate the 12 month warranty from the date of installation; but, shall not exceed 18 months from the shipping date.

Complete the following information and retain for your records.

Model Number: _____

Serial Number: _____

Project Number (if applicable): _____

Date of Installation: _____

Inspected By: _____

Name of Application: _____

Table of Contents

General Safety Information

DO NOT attempt to install, operate, maintain, or dispose of this equipment until you have read and understood all of the product safety information and directions that are contained in this manual.

Safety Alert Symbol

The **Safety Alert Symbol** is comprised of an equilateral triangle enclosing an exclamation mark. This indicates that a potential personal injury hazard exists.

⚠

Signal Words

Listed below are the signal words that are used throughout this manual followed by their descriptions and associated symbols. When the words **DANGER**, **WARNING**, and **CAUTION** are used in this manual they will be followed by important safety information that must be carefully followed.

The word **DANGER** preceded by the safety alert symbol indicates that an imminently hazardous situation exists that, if not avoided or if instructions are not followed precisely, will result in serious injury to personnel or loss of life.

⚠ DANGER

The word **WARNING** preceded by the safety alert symbol indicates that a potentially hazardous situation exists that, if not avoided or if instructions are not followed precisely, could result in serious injury to personnel or loss of life.

⚠ WARNING

The word **CAUTION** preceded by the safety alert symbol indicates that a potentially hazardous situation exists that, if not avoided or if instructions are not followed precisely, may result in minor or moderate injury.

⚠ CAUTION

The word **CAUTION** without the safety alert symbol indicates a potentially hazardous situation exists that, if not avoided or if instructions are not followed precisely, may result in equipment and property damage.

CAUTION

Special Symbols

To identify special hazards, other symbols may appear in conjunction with the **DANGER**, **WARNING**, and **CAUTION** signal words. These symbols indicate areas that require special and/or strict adherence to the procedures to prevent serious injury to personnel or loss of life.

Electrical Hazard Symbol

A symbol that is comprised of an equilateral triangle enclosing a lightning bolt indicates a hazard of injury from electrical shock or burn.

Explosion Hazard Symbol

A symbol that is comprised of an equilateral triangle enclosing an explosion indicates a hazard of injury from exploding parts.

Equipment Warning Labels

DO NOT attempt to install, operate, perform maintenance, or dispose of this equipment until you have read and understood all of the product labels and user directions that are contained in this manual.

Warning labels that are attached to the equipment will include the exclamation mark within a triangle. **DO NOT** remove or cover any of these labels. If the labels are damaged or if additional labels are required, contact your TIC Sales Representative.

Labels attached to the equipment are there to provide useful information or to indicate an imminently hazardous situation that may result in serious injury, severe property and equipment damage, or loss of life if safe procedures or methods are not followed as outlined in this manual.

Qualified Personnel

Installation, operation, and maintenance shall be performed by **Qualified Personnel <u>Only</u>**. A Qualified Person is one that has the skills and knowledge relating to the construction, installation, operation, and maintenance of the electrical equipment and has received safety training on the hazards involved (Refer to the latest edition of NFPA 70E for additional safety requirements).

Qualified Personnel shall:

* Have carefully read the entire manual.

* Be familiar with the construction and function of the ASD, the equipment being driven, and the hazards involved.

* Be able to recognize and properly address hazards associated with the application of motor-driven equipment.

* Be trained and authorized to safely energize, de-energize, ground, lock out/tag out circuits and equipment, and clear faults in accordance with established safety practices.

* Be trained in the proper care and use of protective equipment such as safety shoes, rubber gloves, hard hats, safety glasses, face shields, flash clothing, etc., in accordance with established safety practices.

For further information on workplace safety visit www.osha.gov.

Equipment Inspection

- Upon receipt of the equipment inspect the packaging and equipment for shipping damage.

- Carefully unpack the equipment and check for parts that may have been damaged during shipping, missing parts, or concealed damage. If any discrepancies are discovered, it should be noted with the carrier prior to accepting the shipment, if possible. File a claim with the carrier if necessary and immediately notify your TIC Sales Representative.

- **DO NOT** install the ASD if it is damaged or if it is missing any component(s).

- Ensure that the rated capacity and the model number specified on the nameplate conform to the order specifications.

- Modification of this equipment is dangerous and is to be performed by factory trained personnel. When modifications are required contact your TIC Sales Representative.

- Inspections may be required after moving equipment.

- Contact your TIC Sales Representative to report discrepancies or for assistance if required.

Handling and Storage

- Use proper lifting techniques when moving the ASD; including properly sizing up the load, getting assistance, and using a forklift if required.

- Store in a well-ventilated location and preferably in the original carton if the equipment will not be used upon receipt.

- Store in a cool, clean, and dry location. Avoid storage locations with extreme temperatures, rapid temperature changes, high humidity, moisture, dust, corrosive gases, or metal particles.

- The storage temperature range of the H9 ASD is -13° to 149° F (-25° to 65° C).

- Do not store the unit in places that are exposed to outside weather conditions (i.e., wind, rain, snow, etc.).

- Store in an upright position.

Disposal

Never dispose of electrical components via incineration. Contact your state environmental agency for details on disposal of electrical components and packaging in your area.

Installation Precautions

Location and Ambient Requirements

- The TIC ASD is intended for permanent installations only.

- Installation should conform to the **National Electrical Code — Article 110** (*Requirements For Electrical Installations*), all regulations of the **Occupational Safety and Health Administration**, and any other applicable national, regional, or industry codes and standards.

Note: *For ALL references to the National Electrical Code (NEC), see the latest release of the National Electrical Code.*

- Select a mounting location that is easily accessible, has adequate personnel working space, and adequate illumination for adjustment, inspection, and maintenance of the equipment (refer to NEC Article 110-13).

- **DO NOT** mount the ASD in a location that would produce catastrophic results if it were to fall from its mounting location (equipment damage or injury).

- **DO NOT** mount the ASD in a location that would allow it to be exposed to flammable chemicals or gases, water, solvents, or other fluids.

- Avoid installation in areas where vibration, heat, humidity, dust, fibers, metal particles, explosive/corrosive mists or gases, or sources of electrical noise are present.

- The installation location shall not be exposed to direct sunlight.

- Allow proper clearance spaces for installation. Do not obstruct the ventilation openings. Refer to the section titled Installation and Connections on pg. 14 for further information on ventilation requirements.

- The ambient operating temperature range of the H9 ASD is 14° to 104° F (-10 to 40° C).

Mounting Requirements

- Only **Qualified Personnel** should install this equipment.

- Install the unit in a secure and upright position in a well-ventilated area.

- As a minimum, the installation of the equipment should conform to the **NEC — Article 110**, OSHA, as well as any other applicable national, regional, or industry codes and standards.

- Installation practices should conform to the latest revision of NFPA 70E Electrical Safety Requirements for Employee Workplaces.

- It is the responsibility of the ASD installer/maintenance personnel to ensure that the unit is installed into an enclosure that will protect personnel against electric shock.

Conductor Routing and Grounding

⚠ WARNING ⚡

- Use separate metal conduits for routing the input power, output power, and control circuits.

- A separate ground cable should be run inside the conduit with the input power, output power, and control circuits.

- **DO NOT** connect **CC** to earth ground.

- Use **IICC** terminal as the return for the **V/I** input.

- Always ground the unit to prevent electrical shock and to help reduce electrical noise.

- It is the responsibility of the ASD installer/maintenance personnel to provide proper grounding and branch circuit protection in accordance with the **NEC** and any applicable local codes.

— The Metal Of Conduit Is Not An Acceptable Ground —

Grounding Capacitor Switch

The ASD is equipped with noise reduction capacitors which are used to reduce the EMI leakage via the 3-phase power-input circuit and for compliance with the **Electromagnetic Compatibility Directive** (EMC).

The effective value of the capacitor may be increased, reduced, or removed entirely via the **Selector Switch**, **Switching Bar**, or the **Switching Screw** — the type used is typeform-specific.

The **Grounding Capacitor Switch** allows the user to quickly change the value of the capacitance of the 3-phase input circuit without the use of tools.

See the section titled System Grounding on pg. 18 for more on the Grounding Capacitor.

See figures 4, 5, 6, and 7 on pg. 19 for an electrical depiction of the leakage-reduction functionality of the Grounding Capacitor and the methods used to set the capacitance value.

Power Connections

⚠ **DANGER** ⚡

Contact With Energized Wiring Will Cause Severe Injury Or Loss Of Life.

- Turn off, lock out, and tag out all power sources before proceeding to connect the power wiring to the equipment.

- After ensuring that all power sources are turned off and isolated in accordance with established lock out/tag out procedures, connect the 3-phase power source wiring of the correct voltage to the correct input terminals and connect the output terminals to a motor of the correct voltage and type for the application (refer to the NEC Article 300 – Wiring Methods and Article 310 – Conductors For General Wiring). Size the branch circuit conductors in accordance with the NEC Table 310.16.

- Ensure that the 3-phase input power is **NOT** connected to the output of the ASD. This will damage the ASD and may cause injury to personnel.

- **DO NOT** connect resistors across terminals PA – PC or PO – PC. This may cause a fire.

- Ensure the correct phase sequence and the desired direction of motor rotation in the **Bypass** mode (if applicable).

Protection

- Ensure that primary protection exists for the input wiring to the equipment. This protection must be able to interrupt the available fault current from the power line. The equipment may or may not be equipped with an input disconnect (option).

- All cable entry openings must be sealed to reduce the risk of entry by vermin and to allow for maximum cooling efficiency.

- External dynamic braking resistors must be thermally protected.

- It is the responsibility of the ASD installer/maintenance personnel to setup the **Emergency Off** braking system of the ASD. The function of the **Emergency Off** braking function is to remove output power from the drive in the event of an emergency. A supplemental braking system may also be engaged in the event of an emergency. For further information on braking systems, see parameters F250 and F304.

Note: *A supplemental emergency stopping system should be used with the ASD. Emergency stopping should not be a task of the ASD alone.*

- Follow all warnings and precautions and do not exceed equipment ratings.

System Integration Precautions

The following precautions are provided as general guidelines for the setup of the ASD within the system.

- The TIC ASD is a general-purpose product. It is a system component only and the system design should take this into consideration. Please contact your TIC Sales Representative for application-specific information or for training support.

- The TIC ASD is part of a larger system and the safe operation of the ASD will depend upon observing certain precautions and performing proper system integration.

- Improperly designed or improperly installed system interlocks may render the motor unable to start or stop on command.

- The failure of external or ancillary components may cause intermittent system operation (i.e., the system may start the motor without warning).

- A detailed system analysis and job safety analysis should be performed by the systems designer and/or systems integrator before the installation of the ASD component. Contact your TIC Sales Representative for options availability and for application-specific system integration information if required.

Personnel Protection

- Installation, operation, and maintenance shall be performed by Qualified Personnel **Only**.

- A thorough understanding of the ASD will be required before the installation, operation, or maintenance of the ASD.

⚠ WARNING ⚡

- Rotating machinery and live conductors can be hazardous and shall not come into contact with personnel. Personnel should be protected from all rotating machinery and electrical hazards at all times.

- Insulators, machine guards, and electrical safeguards may fail or be defeated by the purposeful or inadvertent actions of workers. Insulators, machine guards, and electrical safeguards are to be inspected (and tested where possible) at installation and periodically after installation for potential hazardous conditions.

- **DO NOT** allow personnel near rotating machinery. Warning signs to this effect shall be posted at or near the machinery.

- **DO NOT** allow personnel near electrical conductors. Contact with electrical conductors can be fatal. Warning signs to this effect shall be posted at or near the hazard.

- Personal protection equipment shall be provided and used to protect employees from any hazards inherent to system operation.

System Setup Requirements

- When using the ASD as an integral part of a larger system, it is the responsibility of the ASD installer/maintenance personnel to ensure that there is a fail-safe in place (i.e., an arrangement designed to switch the system to a safe condition if there is a fault or failure).

- Power factor improvement capacitors or surge absorbers **MUST NOT** be installed on the output of the ASD.

- Use of the built-in system protective features is highly recommended (i.e., E-Off, Overload Protection, etc.).

- The operating controls and system status indicators should be clearly readable and positioned where the operator can see them without obstruction.

- Additional warnings and notifications shall be posted at the equipment installation location as deemed required by Qualified Personnel.

⚠ CAUTION

- System safety features should be employed and designed into the integrated system in a manner such that system operation, even in the event of system failure, will not cause harm or result in system damage or injury to personnel (i.e., E-Off, Auto-Restart settings, System Interlocks, etc.).

- The programming setup and system configuration of the ASD may allow it to start the motor unexpectedly. A familiarity with the **Auto-Restart** (F301) settings are a requirement to use this product.

- There may be thermal or physical properties, or ancillary devices integrated into the overall system that may allow for the ASD to start the motor without warning. Signs to this effect must be posted at the equipment installation location.

- If a secondary magnetic contactor (MC) or an ASD output disconnect is used between the ASD and the load, it should be interlocked to halt the ASD before the secondary contact opens. If the output contactor is used for bypass operation, it must be interlocked such that commercial power is never applied to the ASD output terminals (U, V, or W).

- When using an ASD output disconnect, the ASD and the motor must be stopped before the disconnect is either opened or closed. Closing the output disconnect while the 3-phase output of the ASD is active may result in equipment damage or injury to personnel.

Operational and Maintenance Precautions

⚠ WARNING ⚡

- Turn off, lock out, and tag out the main power, the control power, and instrumentation connections before inspecting or servicing the drive, opening the door of the enclosure, or connecting/disconnecting the power wiring to the equipment.

- The capacitors of the ASD maintain a residual charge for a period of time after turning the ASD off. The required time for each ASD typeform is indicated with a cabinet label and a **Charge LED** (shown for smaller ASDs in Figure 2 on pg. 16; LED is located on the front panel of larger ASDs). Wait at least the minimum time indicated on the enclosure-mounted label and ensure that the **Charge LED** has gone out before opening the door of the ASD once the ASD power has been turned off.

- Turn the power on only after attaching (or closing) the front cover and **DO NOT** remove or open the front cover of the ASD when the power is on.

- **DO NOT** attempt to disassemble, modify, or repair the ASD. Call your TIC Sales Representative for repair information.

- **DO NOT** place any objects inside of the ASD.

- If the ASD should emit smoke, or an unusual odor or sound, turn the power off immediately.

- The heat sink and other components may become extremely hot to the touch. Allow the unit to cool before coming in contact with these items.

- The **Auto-Restart** (F301) programmable functions of the ASD may allow for the system to start or stop unexpectedly. Signs to this effect are to be clearly posted at the installation location.

- Remove power from the ASD during extended periods of non-use.

- The system should be inspected periodically for damaged or improperly functioning parts, cleanliness, and to ensure that the connectors are tightened securely.

Motor Characteristics

Listed below are some variable speed AC motor control concepts with which the user of the ASD should become familiar.

Motor Autotuning

Motor production methods may cause minor differences in the motor operation. The negative effects of these differences may be minimized by using the **Autotune** feature of the ASD. **Autotuning** is a function of the ASD that measures several parameters of the connected motor and places these readings in a stored table. The software uses the information in the table to help optimize the response of the ASD to application-specific load and operational requirements. The **Autotuning** function may be enabled for automatic tuning, configured manually at F400, or disabled.

The measured parameters include the rotor resistance, the stator resistance, the required excitation inductance, rotational inertia values, and leakage inductance values.

Pulse Width Modulation Operation

The ASD uses sinusoidal **Pulse Width Modulation** (PWM) control. The output current waveform generated by the ASD approaches that of a perfect sine wave; however, the output waveform is slightly distorted. For this reason, the motor may produce more heat, noise, and vibration when operated by an ASD, rather than directly from commercial power.

Low-Speed Operation

Operating a general-purpose motor at lower speeds may cause a decrease in the cooling ability of the motor. Reducing the torque requirement of the motor at lower speeds will decrease the generated heat at lower speeds.

When the motor is to be operated at low speed (less than 50% of full speed) and at the rated torque continuously, a TIC VF motor (designed for use in conjunction with an ASD) is recommended.

Overload Protection Adjustment

The ASD software monitors the output current of the system and determines when an overload condition occurs. The overload current level is a percentage of the rating of the motor. This function protects the motor from overload.

The default setting for the overload detection circuit is set to the maximum rated current of the ASD at the factory. This setting will have to be adjusted to match the rating of the motor with which the ASD is to be used. To change the overload reference level, see Motor Overload Protection Level 1 on pg. 182.

Operation Above 60 Hz

A motor produces more noise and vibration when it is operated at frequencies above 60 Hz. Also, when operating a motor above 60 Hz, the rated limit of the motor or its bearings may be exceeded; this may void the motor warranty.

Contact the motor manufacturer for additional information before operating the motor above 60 Hz.

Power Factor Correction

DO NOT connect a power factor correction capacitor or surge absorber to the output of the ASD.

If the ASD is used with a motor that is equipped with a capacitor for power factor correction, remove the capacitor from the motor.

Connecting either of these devices to the output of the ASD may cause the ASD to malfunction and trip, or the output device may cause an over-current condition resulting in damage to the device or the ASD.

Light Load Conditions

When a motor is operated under a continuous light load (i.e., at a load of less than 50% of its rated capacity) or it drives a load which produces a very small amount of inertia, it may become unstable and produce abnormal vibration or trips because of an over-current condition. In such a case, the carrier frequency may be lowered to compensate for this undesirable condition (see Program $\Rightarrow$ Special $\Rightarrow$ Carrier Frequency $\Rightarrow$ PWM Carrier Frequency).

Note: *When operating in the **Vector Control** mode the carrier frequency should be set to 2.2 kHz or above.*

Motor/Load Combinations

When the ASD is used in combination with one of the following motors or loads, it may result in unstable operation.

• A motor with a rated capacity that exceeds the motor capacity recommended for the ASD.

• An explosion-proof motor.

When using the ASD with an explosion-proof motor or other special motor types, lower the carrier frequency to stabilize the operation. **DO NOT** set the carrier frequency below 2.2 kHz if operating the system in the vector control mode.

Note: *When operating in the **Vector Control** mode the carrier frequency should be set to 2.2 kHz or above.*

If the motor being used is coupled to a load that has a large backlash or if coupled to a reciprocating load, use one of the following procedures to stabilize motor operation.

• Adjust the **S-pattern** acceleration/deceleration setting,

• If operating in the **Vector** control mode, adjust the response time, or

• Switch to the **Constant Torque** control mode.

Load-Produced Negative Torque

When the ASD is used with a load that produces negative torque (an overhauling load), the over-voltage or over-current protective functions of the ASD may cause nuisance tripping.

To minimize the undesirable effects of negative torque the dynamic braking system may be used. The dynamic braking system converts the regenerated energy into heat that is dissipated using a braking resistor. The braking resistor must be suitably matched to the load. Dynamic braking is very effective in reducing the DC bus voltage during a momentary over-voltage condition.

⚠ CAUTION

If under extreme conditions the dynamic braking system or a component of this system were to fail, the dynamic braking resistor may experience an extended over-current condition. The DBR circuit was designed to dissipate excessive amounts of heat and if the extended over-current condition were allowed to exceed the circuit parameters, this condition could result in a fire hazard.

To combat this condition, the 3-phase input may be connected using contactors that are configured to open in the event of an extended DBR over-current condition or an internal circuit failure. Using a thermal sensor and/or overload protection as the 3-phase input contactor drive signal, the contactors will open and remove the 3-phase input power in the event of an extended DBR over-current or system over-voltage condition. See Dynamic Braking System Specifications on pg. 266 for more information on using Dynamic Braking with the H9 ASD.

Motor Braking

The motor may continue to rotate and coast to a stop after being shut off due to the inertia of the load. If an immediate stop is required, a braking system should be used. The two most common types of motor braking systems used with the ASD are **DC Injection Braking** and **Dynamic Braking**.

For further information on braking systems, see DC Injection Braking on pg. 124 and Dynamic Braking on pg. 136.

ASD Characteristics

Over-Current Protection

Each ASD model is designed for a specified operating power range. The ASD will incur a trip if the design specifications are exceeded.

However, the ASD may be operated at 100% of the specified output-current range continuously or at 120% for a limited amount of time as indicated in the section titled Current/Voltage Specifications on pg. 262. Also, the Stall Prevention Level may be adjusted to help with nuisance over-current trips (see F601).

When using the ASD for an application to control a motor that is rated significantly less than the maximum current rating of the ASD, the over-current limit (Thermal Overload Protection) setting will have to be changed to match the FLA of the motor. For further information on this parameter, see Motor Overload Protection Level 1 on pg. 182.

ASD Capacity

The ASD must not be used with a motor that has a larger capacity than the ASD, even if the motor is operated under a small load. An ASD being used in this way will be susceptible to a high-output peak current which may result in nuisance tripping.

Do not apply a level of input voltage to an ASD that is beyond that which the ASD is rated. The input voltage may be stepped down when required with the use of a step-down transformer or some other type of voltage-reduction system.

Using Vector Control

Using **Vector Control** enables the system to produce very high torque over the entire operating range even at extremely low speeds. **Vector Control** may be used with or without feedback. However, using feedback increases the speed accuracy for applications requiring precise speed control.

See F015 on pg. 81 for further information on using **Vector Control**.

Installation and Connections

The **H9 Adjustable Speed Drive** may be set up initially by performing a few simple configuration settings. To operate properly, the ASD must be securely mounted and connected to a power source (3-phase AC input at the R/L1, S/L2, and T/L3 terminals). The control terminals of the ASD may be used by connecting the terminals of the **Terminal Board** to the proper sensors or signal input sources (see the section titled I/O and Control on pg. 21 and Figure 9 on pg. 24).

System performance may be further enhanced by assigning a function to the output terminals of the **Terminal Board** and connecting the terminals to the proper indicators or actuators (LEDs, relays, contactors, etc.).

Note: *The optional ASD interface boards may be used to expand the I/O functionality of the ASD.*

Installation Notes

⚠ CAUTION

When a brake-equipped motor is connected to the ASD, it is possible that the brake may not release at startup because of insufficient voltage. To avoid this, **DO NOT** connect the brake or the brake contactor to the output of the ASD.

If an output contactor is used for bypass operation, it must be interlocked such that commercial power is never applied to the output terminals of the ASD (U/T1, V/T2, and W/T3).

DO NOT apply commercial power to the ASD output terminals **U/T1, V/T2, and W/T3**.

If a secondary magnetic contactor (MC) is used between the output of the ASD and the motor, it should be interlocked such that the **ST – CC** connection is disconnected before the output contactor is opened.

DO NOT open and then close a secondary magnetic contactor between the ASD and the motor unless the ASD is off and the motor is not rotating.

Note: *Re-application of power via a secondary contact while the ASD is on or while the motor is still turning may cause ASD damage.*

The ASD input voltage should remain within 10% of the specified input voltage range. Input voltages approaching the upper or lower-limit settings may require that the over-voltage and under-voltage stall protection level parameters be adjusted. Voltages outside of the permissible tolerance should be avoided.

The frequency of the input power should be ±2 Hz of the specified input frequency.

DO NOT use an ASD with a motor that has a current rating higher than the rated current of the ASD.

The H9 ASD is designed to operate NEMA B motors. Consult with your TIC Sales Representative before using the ASD for special applications such as with an explosion-proof motor or applications with a piston load.

Disconnect the ASD from the motor before megging or applying a bypass voltage to the motor.

Interface problems may occur when an ASD is used in conjunction with some types of process controllers. Signal isolation may be required to prevent controller and/or ASD malfunction (contact your TIC Sales Representative or the process controller manufacturer for additional information about compatibility and signal isolation).

Use caution when setting the output frequency. Over speeding a motor decreases its ability to deliver torque and may result in damage to the motor and/or the driven equipment.

Not all H9 ASDs are equipped with internal primary power input fuses (HP dependent). When connecting two or more drives that have no internal fuse to the same power line as shown in Figure 1, select a circuit-breaking configuration that will ensure that if a short circuit occurs in ASD 1, only MCCB2 trips, not MCCB1. If it is not feasible to use this configuration, insert a fuse between MCCB2 and ASD 1.

Figure 1. Typical Circuit Breaker Configuration.
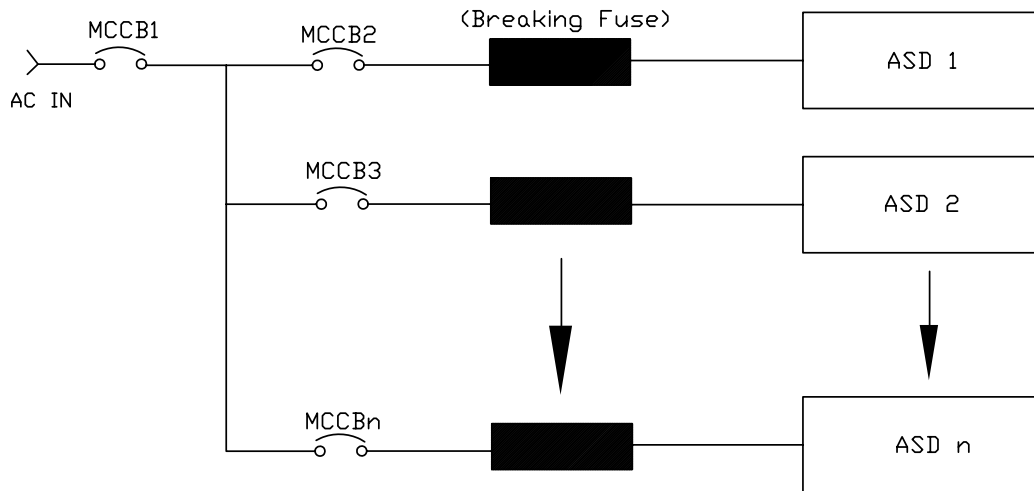

Mounting the ASD

CAUTION

— The following thermal specifications apply to the 230-volt and 460-volt ASDs ONLY —

Install the unit securely in a well ventilated area that is out of direct sunlight.

The process of converting AC to DC, and then back to AC produces heat. During normal ASD operation, up to 5% of the input energy to the ASD may be dissipated as heat. If installing the ASD in a cabinet, ensure that there is adequate ventilation.

DO NOT operate the ASD with the enclosure door open.

The ambient operating temperature rating of the 3.0 to 20 HP H9 ASD is 14° to 104° F (-10° to 40° C).

When installing adjacent ASDs horizontally TIC recommends at least 5 cm of space between adjacent units. However, horizontally mounted ASDs may be installed side-by-side with no space in between the adjacent units — side-by-side installations require that the top cover be removed from each ASD.

For 150 HP and above ASDs, a minimum of 50 cm of space is required above and below adjacent units and any obstruction.This space is the recommended minimum space requirement for the ASD and ensures that adequate ventilation is provided for each unit. More space will provide a better environment for cooling (see the section titled Enclosure and Conduit Plate Dimensions on pg. 254 for additional information on mounting space requirements).

Note: *Ensure that the ventilation openings are not obstructed.*

Connecting the ASD

⚠ DANGER ⚡

Refer to the section titled Installation Precautions on pg. 4 and the section titled Lead Length Specifications on pg. 20 before attempting to connect the ASD and the motor to electrical power.

Power Connections

⚠ DANGER ⚡

Contact With 3-Phase Input/Output Terminals May Cause An Electrical Shock Resulting In Injury Or Loss Of Life.

See the Typical Connection Diagram on pg. 26 for a system I/O connectivity schematic.

An inductor (DCL) may be connected across the **PO** and **PA/+** terminals to provide additional filtering. When not used, a jumper must be connected across these terminals (see Typical Connection Diagram on pg. 26).

**PA/+** and **PB** are used for the DBR connection if using a braking resistor.

PC/- is the negative terminal of the DC bus.

R/L1, **S/L2**, and **T/L3** are the 3-phase input supply terminals for the ASD.

U/T1, **V/T2**, and **W/T3** are the output terminals of the ASD that connect to the motor.

The location of the **Charge LED** for the smaller typeform ASD is provided in Figure 2. The **Charge LED** is located on the front door of the enclosure of the larger ASDs.

Figure 2. Typical H9 ASD Input/output Terminals and the Grounding Capacitor Switch.
Grounding Capacitor Switch — Pull for **Small** capacitance/push for **Large** capacitance.

Power Connection Requirements

Connect the 3-phase input power to the input terminals of the ASD at **R/L1**, **S/L2**, and **T/L3** (see Figure 3 for the typical electrical connection scheme). Connect the output of the ASD to the motor from the ASD terminals **U/T1**, **V/T2**, and **W/T3**. The input and output conductors and terminal lugs used shall be in accordance with the requirements listed in the section titled Current/Voltage Specifications on pg. 262.

If multiple conductors are used in parallel for the input or output power and it is necessary to use separate conduits, each parallel set shall have its own conduit and not share its conduit with other parallel sets (i.e., place U1, V1, W1, and a ground wire in one conduit and U2, V2, W2 and a ground wire in another; refer to the NEC Article 300.20 and Article 310.4). National and local electrical codes should be referenced if three or more power conductors are run in the same conduit (refer to the NEC Article 310 adjustment factors).

Note: *National and local codes should be referenced when running more than three conductors in the same conduit.*

Install a molded case circuit breaker (MCCB) or fuse between the 3-phase power source and the ASD in accordance with the fault current setting of the ASD and the **NEC Article 430**.

The ASD is designed and tested to comply with UL Standard 508C. Modifications to the ASD system or failure to comply with the short circuit protection requirements outlined in this manual may disqualify the UL rating. See Table 22 on pg. 268 for typeform-specific short circuit protection recommendations.

As a minimum, the installation of the ASD shall conform to the **NEC Article 110**, the **Occupational Safety and Health Administration** requirements, and to any other local and regional industry codes and standards.

Note: *In the event that the motor rotates in the wrong direction when powered up, reverse any two of the three ASD output power leads (U, V, or W) connected to the motor.*

Figure 3. H9 ASD/Motor Typical Connection Diagram.
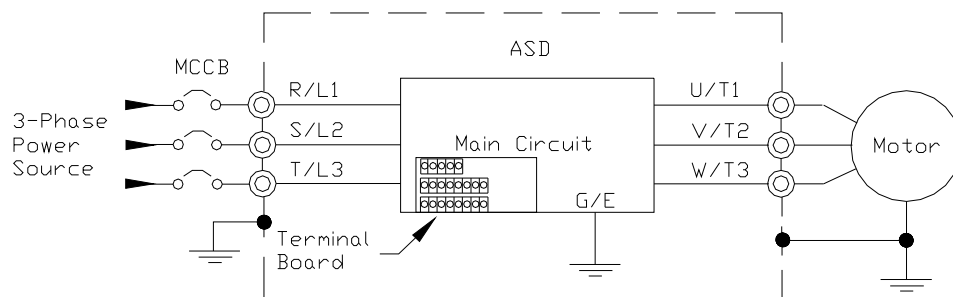

System Grounding

Proper grounding helps to prevent electrical shock and to reduce electrical noise. The ASD is designed to be grounded in accordance with **Article 250** of the **NEC** or **Section 10/Part One** of the **Canadian Electrical Code** (CEC).

The grounding conductor shall be sized in accordance with **Article 250-122** of the **NEC** or **Part One-Table 6** of the **CEC**.

— The Metal Of Conduit Is Not An Acceptable Ground —

The input, output, and control lines of the system shall be run in separate metal conduits and each shall have its own ground conductor.

ASDs produce high-frequency noise — take steps to avoid the negative effects of noise. Listed below are some examples of measures that will help to combat noise problems.

• **DO NOT** install the input power and output power wires in the same duct or in parallel with each other, and do not bind them together.

• **DO NOT** install the input/output power wires and the wires of the control circuit in the same duct or in parallel with each other, and do not bind them together.

• Use shielded wires or twisted wires for the control circuits.

• Ensure that the grounding terminals (G/E) of the ASD are securely connected to ground.

• Connect a surge suppressor to every electromagnetic contactor and every relay installed near the ASD.

• Install noise filters as required.

Grounding Capacitor

The **Grounding Capacitor** plays a role in minimizing the effects of leakage current through the ASD system and through ground paths to other systems. Leakage current may cause the improper operation of earth-leakage current breakers, leakage-current relays, ground relays, fire alarms, and other sensors — and it may cause superimposed noise on CRT screens.

The Grounding Capacitor Switch allows the user to quickly change the value of the leakage-reduction capacitance of the 3-phase input circuit. See figures 4, 5, 6, and 7 on pg. 19 for an electrical depiction of the leakage-reduction functionality and the methods used to change the capacitance value. The method used is typeform-specific.

If using a 460-volt 5 HP ASD or a 460-volt ASD that is in the range of 7.5 HP to 25 HP, and the **U/T1**, **V/T2**, and **W/T3** connections to the motor are 100 meters or more in length, the ASD **Carrier Frequency** must be set to 4 kHz or less when activating or deactivating the Grounding Capacitor Switch. ASD overheating may occur if the **Carrier Frequency** is set above 4 kHz when activating or deactivating the Grounding Capacitor Switch.

See pg. 5 for more information on the Grounding Capacitor Switch and pg. 16 for the location.

Figure 4. The **Grounding Capacitor Switch** is used on typeforms **230-volt** 0.75 HP to 10 HP and the 25 and 30 HP/**460-volt** 1.0 HP to 25 HP. The value may be set to **Maximum** (default setting) or to **Zero** by pushing or pulling the switch actuator, respectively.

Figure 5. The **Grounding Capacitor Switch** is used on typeforms **230-volt** 15 HP to 20 HP and the 40 HP to 60 HP/**460-volt** 30 HP to 100 HP. The value may be set to **Large** (default setting) or **Small** by pushing or pulling the switch actuator, respectively.
Figure 6. The **Grounding Capacitor Bar** is used on typeforms **230-volt** 75 HP and the 100 HP/**460-volt** 125 HP and the 150 HP.
The value may be set to **Large** or **Small** (default setting) by connecting or disconnecting the switching bar, respectively.

Figure 7. The **Grounding Capacitor Screw** is used on typeforms **460-volt** 200 HP and above.
The value may be set to **Large** or **Small** (default setting) by placing the screw in the **A** position or by placing the screw in the **B** position, respectively.

Lead Length Specifications

Adhere to the **NEC** and any local codes during the installation of ASD/motor systems. Excessive lead lengths may adversely effect the performance of the motor. Special cables are not required. Lead lengths from the ASD to the motor in excess of those listed in Table 1 may require filters to be added to the output of the ASD. Table 1 lists the suggested maximum lead lengths for the listed motor voltages.

Table 1. Lead Length Recommendations.

Model	PWM Carrier Frequency	NEMA MG1 Part 31 Compliant Motors	NEMA MG1 Part 30 Compliant Motors
230-Volt	All	1000 feet	450 feet
460-Volt	< 5 kHz	600 feet	200 feet
	≥ 5 kHz	300 feet	100 feet

Note: *Contact the TIC Customer Support Center for application assistance when using lead lengths in excess of those listed.*

Exceeding the peak voltage rating or the allowable thermal rise time of the motor insulation will reduce the life expectancy of the motor.

*When operating in the **Vector Control** mode the carrier frequency should be set to 2.2 kHz or above.*

I/O and Control

The H9 ASD can be controlled by several input types and combinations thereof, as well as operate within a wide range of output frequency and voltage levels. This section discusses the ASD control methods and supported I/O functions.

The **Terminal Board** supports discrete and analog I/O functions and is shown in Figure 9 on pg. 24. Table 2 lists the names, functions, and settings (default settings of programmable terminals) of the input and output terminals of the **Terminal Board**.

Note: *To use the input lines of the **Terminal Board** to provide **Run** commands the **Command Mode** setting must be set to **Terminal Block**.*

Typical Connection Diagram on pg. 26 shows the typical connection diagram for the H9 ASD system.

Table 2. Terminal Board Terminal Names and Functions.

Terminal Name	Input/Output	Function (Default Setting If Programmable) (See Terminal Descriptions on pg. 22)	Circuit Config.
ST	Discrete Input Connect to CC to activate (Sink mode).	**Standby** — Multifunctional programmable discrete input. Activation required for normal ASD operation.	Figure 10 on pg. 25.
RES		**Reset** — Multifunctional programmable discrete input. Resets ASD.	
F		**Forward** — Multifunctional programmable discrete input.	
R		**Reverse** — Multifunctional programmable discrete input.	
S1		**Preset Speed 1** — Multifunctional programmable discrete input.	
S2		**Preset Speed 2** — Multifunctional programmable discrete input.	
S3		**Preset Speed 3** — Multifunctional programmable discrete input.	
S4		**Preset Speed 4** — Multifunctional programmable discrete input.	
O1A/B (OUT1)	Switched Output	**Low Speed** — Multifunctional programmable discrete output.	Figure 16 on pg. 25.
O2A/B (OUT2)		**Reach Frequency** — Multifunctional programmable discrete output.	
FLA		Fault relay (N.O.).	Figure 19 on pg. 25.
FLB		Fault relay (N.C.).	
FLC		Fault relay (common).	
RR	Analog Input	**Frequency Mode 1 —** Multifunction programmable analog input. (0.0 to 10 VDC input — 0 Hz to Maximum Frequency).	Figure 11 on pg. 25.
RX		Multifunctional programmable analog input (-10 to +10 VDC input).	Figure 12 on pg. 25.
V/I (Select V or I via SW301)		Unassigned — **V** — Multifunctional programmable isolated analog voltage input (0 to 10 VDC input)	Figure 13 on pg. 25.
		Frequency Mode 2 (default SW301 setting) — **I** — Multifunctional programmable isolated analog current input (4 [0] to 20 mADC input — 0 Hz to Maximum Frequency).	
AM	Analog Output	**Output Current —** Current output that is proportional to the output current of the ASD or to the magnitude of the function assigned to this terminal (see Table 8 on pg. 239 for assignment listing).	Figure 18 on pg. 25
FM		**Output Frequency —** <u>Current</u> or <u>Voltage</u> output that is proportional to the output frequency of the ASD or to the magnitude of the function assigned to this terminal (see Table 8 on pg. 239). Select **Current** or **Voltage** at F681.	
SU+	DC Input	Externally-supplied 24 VDC backup control power (1.1 A min.).	
P24	DC Output	24 VDC output (200 mA max.).	Figure 14 on pg. 25.
PP		10.0 VDC/10 mA voltage source for an external potentiometer.	Figure 15 on pg. 25.
FP	Pulsed Output	**Frequency Pulse** — Multifunctional programmable output pulse train of a frequency based on the output frequency of the ASD (see Table 6 on pg. 237).	Figure 17 on pg. 25.
IICC	—	Return for the **V/I** input terminal. (see **IICC** on pg. 105).	**DO NOT** connect to **Earth Gnd** or to each other.
CCA	—	Return for the **RR**, **RX**, **P24**, and the **PP** terminals.	
CC	—	Return for the **AM**, **FM**, **SU+**, and the discrete input terminals.	

Terminal Descriptions

Note: *The programmable terminal assignments may be accessed and changed from the default settings as mapped on pg. 46 or via the* **Direct Access** *method: Program* ⇒ *Direct Access* ⇒ **Applicable Parameter Number**. *See the section titled* Program Mode Menu Navigation on pg. 46 *for the applicable* **Direct Access** *parameter numbers. For further information on terminal assignments and default setting changes, see the sections titled* Terminal on pg. 47 *and* Default Setting Changes on pg. 74.

Note: *See the section titled* Cable/Terminal/Torque Specifications on pg. 264 *for the ASD conductor and terminal electrical specifications.*

ST — The default setting for this terminal is the **Standby** mode controller. As the default setting, this terminal must be activated for normal system operation. The **ST** terminal is activated by connecting **CC** to this terminal (Sink mode). When deactivated, **OFF** is flashed on the LED screen and the **Not-Ready-to-Run** icon is displayed on the LCD screen as shown in Figure 22 on pg. 32. This input terminal may be programmed to any of the functions listed in Table 5 on pg. 234 (see F113).

RES — The default setting for this terminal is **Reset**. The **RES** terminal is activated by connecting **CC** to this terminal (Sink mode). A momentary connection to **CC** resets the ASD and any fault indications from the display. **Reset** is effective when faulted only. This input terminal may be programmed to any of the functions listed in Table 5 on pg. 234 (see F114).

F — The default setting for this terminal is the **Forward** run command. The **F** terminal is activated by connecting **CC** to this terminal (Sink mode). This input terminal may be programmed to any of the functions listed in Table 5 on pg. 234 (see F111).

R — The default setting for this terminal is the **Reverse** run command. The **R** terminal is activated by connecting **CC** to this terminal (Sink mode). This input terminal may be programmed to any of the functions listed in Table 5 on pg. 234 (see F112).

S1 — The default setting for this terminal is the **Preset Speed 1** (see Preset Speed 1 on pg. 83). The **S1** terminal is activated by connecting **CC** to this terminal (Sink mode). This input terminal may be programmed to any of the functions listed in Table 5 on pg. 234 (see F115).

S2 — The default setting for this terminal is the **Preset Speed 2** (see Preset Speed 2 on pg. 83). The **S2** terminal is activated by connecting **CC** to this terminal (Sink mode). This input terminal may be programmed to any of the functions listed in Table 5 on pg. 234 (see F116).

S3 — The default setting for this terminal is the **Preset Speed 3** (see Preset Speed 3 on pg. 84). The **S3** terminal is activated by connecting **CC** to this terminal (Sink mode). This input terminal may be programmed to any of the functions listed in Table 5 on pg. 234 (see F117).

S4 — The default setting for this terminal is the **Preset Speed 4** (see Preset Speed 4 on pg. 84). The **S4** terminal is activated by connecting **CC** to this terminal (Sink mode). This input terminal may be programmed to any of the functions listed in Table 5 on pg. 234 (see F118).

RR — The default function assigned to this terminal is **Frequency Mode 1**. The **RR** terminal accepts a 0 – 10 VDC input signal that is used to control the function assigned to this terminal. This input terminal may be programmed to control the speed or torque of the motor via an amplitude setting or regulate by setting a limit. The gain and bias of this terminal may be adjusted for application-specific suitability (see F210 – F215). See pg. 26 for an electrical depiction of the **RR** terminal.

RX — The default function assigned to this terminal is **Torque Command**. The **RX** terminal accepts a ±10 VDC input signal that is used to control the function assigned to this terminal. This input terminal may be programmed to raise or lower the speed or torque of the motor via an amplitude setting or this terminal may be used to regulate the speed or torque of a motor by setting a limit. The gain and bias of this terminal may be adjusted for application-specific suitability (see F216 – F221).

V/I — The V/I terminal has the dual function of being able to receive an input voltage or current. The function as a voltage input is to receive a 0 – 10 VDC input signal. The function as a current input is to receive a 0 – 20 mA input signal. Using either input type, the function is to control the 0.0 – Maximum Frequency output or the 0.0 to 250% torque output of the ASD. This is an isolated input terminal. This terminal may be programmed to control the speed or torque of the motor and cannot process both input types simultaneously. SW301 must be set to V or I to receive a voltage or current, respectively (see Figure 9 on pg. 24). Terminal scaling and the selection of speed or torque control is accomplished via parameters F201 – F206. The gain and bias of this terminal may be adjusted for application-specific suitability (see F470 and F471).

SU+ — **Control Power Supply Backup** input terminal. This terminal accepts the user-supplied 24 VDC backup power to the control circuits (only). Backup power is used in the event of an open MCCB or during a momentary loss of the 3-phase input power. Parameter settings, real-time clock information, and trip history information are retained with the use of the **SU+** backup power. See the section titled Battery Backup on pg. 28 for more information on system backup features.

P24 — +24 VDC at 200 mA power supply for customer use.

PP — The function of output **PP** is to provide a 10 VDC/10 mADC (max.) output that may be divided using a potentiometer. The tapped voltage is applied to the **RR** input to provide manual control of the **RR** programmed function.

O1A/B (OUT1A/B) — The default function assigned to this terminal is **Output Low-Speed**. This output may be programmed to provide an indication (open or closed) that any of the functions listed in Table 8 on pg. 239 has occurred or is active. This function may be used to signal external equipment (e.g., activate the brake) (see F130). The **OUT1** terminal is rated at 2 A/120 VAC and 2 A/30 VDC.

O2A/B (OUT2A/B) — The default function assigned to this terminal is **ACC/DEC Complete**. This output may be programmed to provide an indication (open or closed) that any of the functions listed in Table 8 on pg. 239 has occurred or is active. This function may be used to signal external equipment (e.g., activate the brake) (see F131). The **OUT2** terminal is rated at 2A/120 VAC and 2A/30 VDC.

FP — The default function of this output terminal is to output a series of pulses at a rate that is a function of the ASD output frequency (50 mA max. at 1.0 kHz to 43.3 kHz). As the output frequency of the ASD goes up so does the **FP** output pulse rate. This terminal may be programmed to provide an output pulse rate that is proportional to the magnitude of the user-selected item from Table 6 on pg. 237. For further information on this terminal see F676 on pg. 193.

AM — This output terminal produces an output current that is proportional to the output frequency of the ASD or of the magnitude of the function assigned to this terminal. The available assignments for this output terminal are listed in Table 6 on pg. 237. For further information on this terminal see F670 on pg. 192.

FM — This output terminal produces an output current or voltage that is proportional to the output frequency of the ASD or of the magnitude of the function assigned to this terminal. The available assignments for this output terminal are listed in Table 6 on pg. 237. For further information on this terminal see F005 on pg. 78. The Voltage/Current output selection is performed at F681.

FLA — One of two normally open contacts that, under user-defined conditions, connect to **FLC**.

FLB — One of two normally closed contacts that, under user-defined conditions, connect to **FLC**.

FLC — **FLC** is the common leg of a single-pole double-throw form C relay. The **FL** relay is the **Fault Relay** by default, but may be programmed to any of the selections of Table 8 on pg. 239. For further information on this terminal see F132 and Figure 8.

Note: *The **FLA**, **FLB**, and **FLC** contacts are rated at 2A/120 VAC and 2A/30 VDC.*

Figure 8. FLA, FLB, and FLC Switching Contacts Shown in the Normal Operating Condition.

Note: *The relay is shown in the normal operating condition. During a **faulted** condition the relay connection is **FLC**-to-**FLA**.*

Figure 20. The H9 ASD Typical Connection Diagram.

Note: *When connecting multiple wires to the PA, PB, PC, or PO terminals, do not connect a solid wire and a stranded wire to the same terminal.*
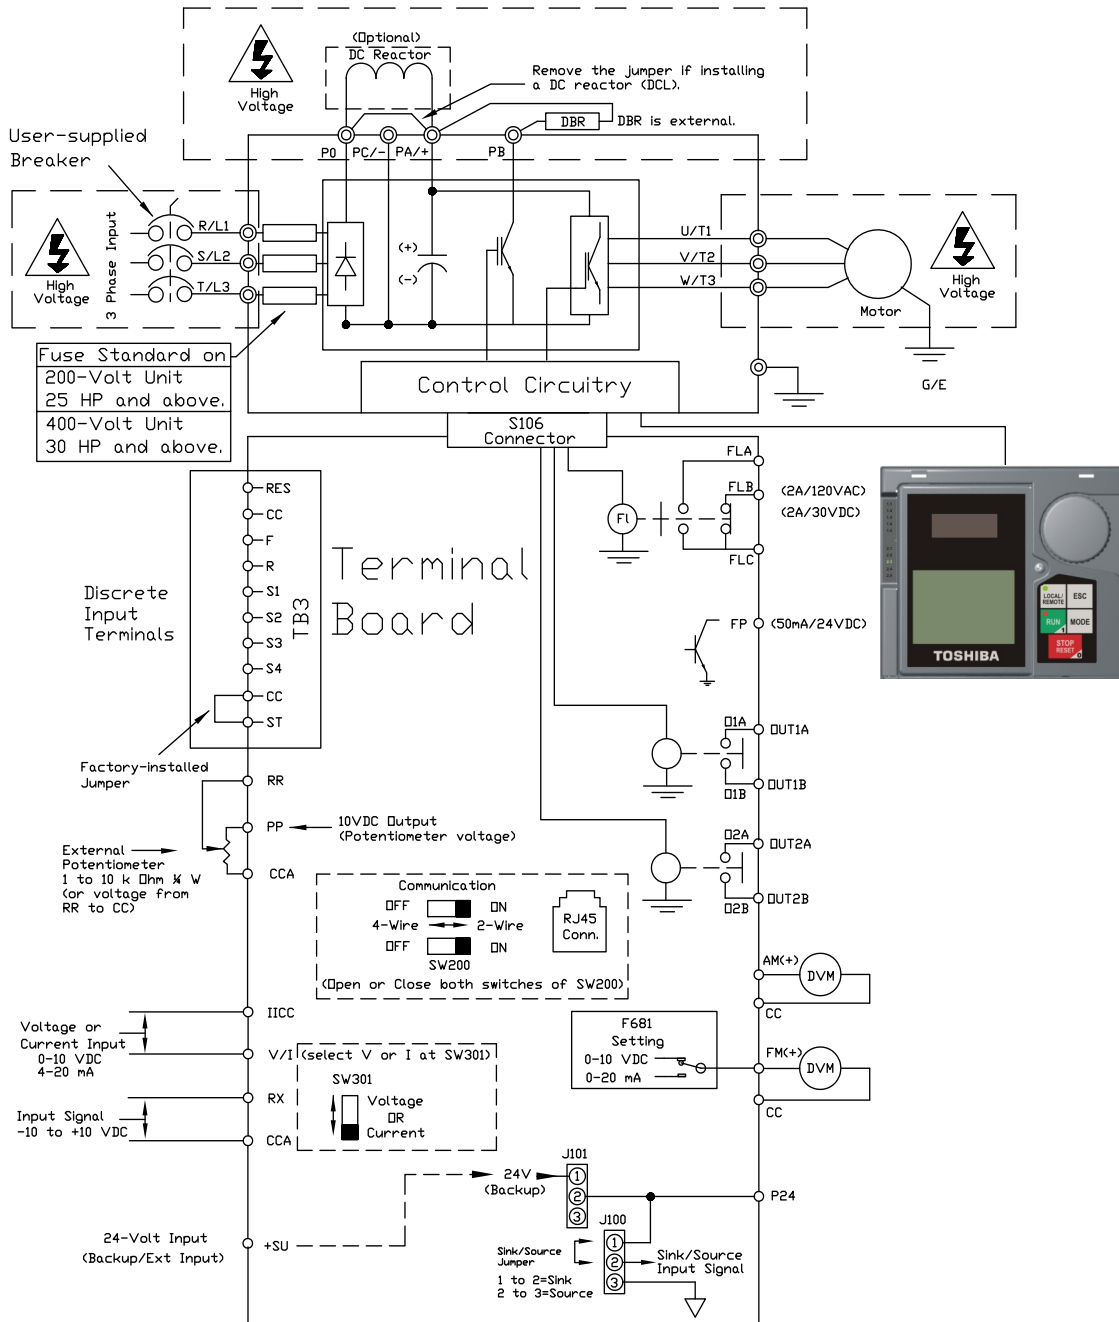

Note: *The AM, FM, and the +SU analog terminals are referenced to CC.*

The RR, RX, P24, and the PP analog terminals are referenced to CCA.

The isolated V/I analog terminal references IICC.

Startup and Test

⚠ DANGER

Before turning on the ASD ensure that:

- **R/L1**, **S/L2**, and **T/L3** are connected to the 3-phase input power.

- **U/T1**, **V/T2**, and **W/T3** are connected to the motor.

- The 3-phase input voltage is within the specified tolerance.

- There are no shorts and all grounds are secured.

- All personnel are at a safe distance from the motor and the motor-driven equipment.

Electronic Operator Interface

The H9 ASD **Electronic Operator Interface** (EOI) is comprised of an LED screen, an LCD screen, two LEDs, a rotary encoder, and five keys. These items are shown and described on .

EOI Operation

The **EOI** is the primary input/output device for the user. The **EOI** may be used to monitor system functions, input data into the system, perform diagnostics, and view performance data (e.g., motor frequency, bus voltage, torque, etc.).

The software used with the H9 ASD is menu driven; thus, making it a select and click environment. The operating parameters of a motor may be selected and viewed or changed using the **EOI** (or via communications).

Battery Backup

The EOI is equipped with a battery backup system. The function of the backup system is to retain the EOI SRAM programming in the event of a power outage, or if an EOI removal and installation from one system to another is required without the loss of programming.

Listed below are the items retained by the battery backup system:

   Trip History,

   EOI Contrast,

   Real-Time Clock Information,

   Monitored Items,

   Password and Lock Out Information,

   Alarms Information,

   Main Monitor Items,

   Prohibited Items, and

   Save User Settings Information (Parameter settings may be saved by the user).

The battery backup system must be activated by the installer or maintenance personnel to use the backup function.

To activate the battery backup system, remove the Phillips screw from the front of the LED/LCD display unit. Remove the LED/LCD display unit from the ASD. From the circuit side of the display unit, remove the jumper at **J1**, pins **2** and **3**. Place the jumper at **J1**, pins **1** and **2**.

The expected battery life cycle is four and a half years.

Note: *The Battery backup system does not supply power to the LED/LCD display*

LED/LCD Screen Installation Note

When installing the LED/LCD display unit of the EOI, ensure that the left side of the display is inserted first with the top and bottom catches (see Phillips screws at underside of display) securely in place. This ensures the proper alignment and electrical connection of the CNX connector of the LED/LCD display unit PCB. Gently hold the display in place while securing the Phillips mounting screw.

If improperly seated, the periphery of the LED/LCD display unit will not be flush with the EOI surface and the unit will not function properly.

EOI Remote Mounting

The EOI may be mounted remotely using the optional **ASD-MTG-KIT9**. The kit contains all of the hardware required to mount the EOI of the 9-Series ASD remotely.

System operation and EOI operation while using the remotely-mounted EOI are the same as with the ASD-mounted configuration.

See the section titled for more information on mounting the EOI remotely.

EOI Features

Figure 21. The H9 ASD Electronic Operator Interface Features.
LED Screen — Displays the running frequency, active **Fault**, or active **Alarm** information.

Rotary Encoder — Used to access the H9 ASD menu selections, change the value of a displayed parameter, and performs the **Enter** key function. Turn the **Rotary Encoder** either clockwise or counterclockwise to perform the **Up** or **Down** functions of the displayed menu selection. Press the **Rotary Encoder** to perform the **Enter** (select) function. Press while turning for times-ten increment/decrement.

LCD Screen — Displays configuration information, performance data (e.g., output frequency, bus voltage, torque, etc.), diagnostic information, and **LED** screen information in expanded normal text.

Local/Remote Key — Toggles the system to and from the **Local** and **Remote** modes. The **Local/Remote** key is disabled while the **Fault** screen is active. The **Local/Remote** key LED is on when the system is in the **Local** mode. The **Local** mode allows the **Command** and **Frequency** control functions to be carried out via the **EOI**.

The **Remote** mode enables the **Command** and **Frequency** control functions to be carried out via the **Terminal Board**, **RS485**, **Communication Board**, **Pulse Input,** or the settings of F003/F004. The (F003/F004) selection may be made via Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ Command Mode and Frequency Mode 1, respectively.

The availability of **Local** mode control (**Command** and **Frequency** control) may be disabled via Program ⇒ Utilities ⇒ Prohibition ⇒ Local/Remote Key Command Override and Local/Remote Key Frequency Override. The availability of the **Local** mode of operation may be reinstated by changing this setting or performing a **Reset** (see F007).

ESC Key — Returns the system to the previous level of the menu tree, toggles between the **EOI Command** screen and the **Frequency Command** screen, or cancels changes made to a field if pressed while still in the reverse video mode (dark background/light text). The three functions are menu-specific.

Run Key — Issues the **Run** command while in the **Local** mode. The **Run** key LED illuminates green while stopped or red while running to alert personnel.

Mode Key — Provides a means to access the three root menus. Pressing the **Mode** key repeatedly loops the system through the three root menus (see Figure 27 on pg. 41). While looping through the root menus, the **Program** menu will display the root menu screen or the **Program** sub-menu item being accessed prior to pressing the **Mode** key.

Stop-Reset Key — This key has three functions.

1. Issues the **Off** command (decelerates to **Stop** at the programmed rate) if pressed once while in the **Local** mode in accordance with the setting of F721.

2. Initiates an **Emergency Off Fault** if pressed twice quickly from the **Local** or **Remote** modes. The **Emergency Off** function terminates the H9 ASD output and stops the motor in accordance with the setting of F603.

3. Resets active **Faults** and/or active **Alarms** if pressed twice quickly. The source of the **Faults** or **Alarms** must be determined and corrected before normal ASD operation can resume.

LED/LCD Screen

The LED screen is used to display the output frequency, active alarms and/or active faults.

If there are no active alarms or faults, the output frequency is displayed.

During an active alarm, the display toggles to and from the running frequency and the active alarm.

During an active fault, the fault is displayed.

Loss of the **ST**-to-**CC** connection flashes **Off**.

LED Character/Font Information

Characters displayed on the LED screen will be of the seven-segment format. Not all alpha-numeric characters are used with the LED screen.

Listed are the seven-segment characters used with the LED screen along with the same characters as they are displayed on the LCD screen.

LCD Character/Font Information

All alpha-numeric characters are available.

LED/LCD Screen Information			
LED	**LCD**	**LED**	**LCD**
A	A	1	1
b	b	2	2
C	C	3	3
d	d	4	4

LCD Screen

The **LCD** screen is the primary user input/output information center. Parameter settings may be viewed or changed using the LCD display unit of the **EOI**. To view or change a parameter setting using the LCD screen, press the **Mode** key until the **Program** menu is displayed. Turn the **Rotary Encoder** until the desired **Primary Menu** item (see pg. 46) is within the cursor block. Press the **Rotary Encoder** to select the item from the **Primary Menu** (repeat the press-to-select for submenu items).

See the section titled Default Setting Changes on pg. 74 for more information on changing parameter settings.

Upon reaching the desired parameter selection, the current setting may be viewed, or selected and changed by pressing the **Rotary Encoder** and the setting will take on the reverse video format (dark background/ light text). Turn the **Rotary Encoder** to change the parameter setting. Press the **ESC** key while the new parameter setting is in the reverse video mode to exit the selection without saving the change or press the **Rotary Encoder** while the parameter setting is in the reverse video mode to accept the change.

Repeated **ESC** key entries at any time takes the menu back one level each time the **ESC** key is pressed until the **Frequency Command** screen is reached. Further **ESC** entries will toggle the system to and from the **Frequency Command** screen and the **EOI Command** menu.

Note: *Changes carried out from the **EOI Command** screen will be effective for EOI-controlled ASD operation only. See the section titled EOI Command Mode on pg. 42 for further information on EOI Command Mode operations.*

Primary Menus of the LCD Screen

The three primary screens of the LCD screen are displayed while accessing the associated operating mode: the **Frequency Command**, **Monitor**, and the **Program Menu** screens.

EOI Remote Mounting

The H9 ASD may be controlled from a remotely-mounted EOI. For safety and application-specific reasons, some ASD installations will warrant that the operator not be in the vicinity during operation or that the EOI not be attached to the ASD housing. Remote mounting will also allow for multiple EOI mountings at one location if controlling and monitoring several ASDs from a central location is required.

The door-mounted EOI of the 230-volt 30-HP and above ASDs and the 460-volt 40 HP and above ASDs use the remote mounting kit **58333** to allow for the door-mount EOI configuration.

The ease of installation and mounting distance away from the ASD may be increased with the use of the optional remote mounting kit **ASD-MTG-KIT9**.

An EOI extender cable is required for remote mounting. The EOI extender cable is available in a 10-ft. length and may be ordered through your TIC Sales Representative. Remote mounting may be extended up to the distance supported by standard RS485 communication — typically 4000 feet (1200 meters) maximum.

The optional dust cover (P/N ASD-BPC) may be used to cover the EOI opening of the ASD housing after removing the EOI.

Remote EOI Hardware

EOI Mounting Hardware

• EOI Remote-Mount Housing — P/N 58333 (included with the 230-volt 30-HP and above; and with the 460-volt 40 HP and above)

• 6-32 x 5/16" Pan Head Screw — P/N 50595 (4 ea.)

• #6 Split-Lock Washer — P/N 01884 (4 ea.)

• #6 Flat Washer — P/N 01885 (4 ea.)

Bezel Plate Mounting Hardware

• Bezel Plate — P/N 52291

• 10-32 Hex Nut — P/N 01922 (4 ea.)

• #10 Split-Lock Washer — P/N 01923 (4 ea.)

• #10 Flat Washer — P/N 01924 (4 ea.)

• Dust Cover — P/N ASD-BPC (Optional)

Extender Cable

• ASD-CAB10F: Cable, 10 ft.

EOI Installation Precautions

Install the unit securely in a well ventilated area that is out of direct sunlight using the four mounting holes at the rear of the EOI. The ambient operating temperature rating is 14° to 104° F (-10° to 40° C).

• Select a mounting location that is easily accessible by the user.

• Avoid installation in areas where vibration, heat, humidity, dust, metal particles, or high levels of electrical noise (EMI) are present.

• **DO NOT** install the EOI where it may be exposed to flammable chemicals or gases, water, solvents, or other fluids.

• Turn on the power only after securing the front cover of the ASD.

EOI Remote Mounting w/o the ASD-MTG-KIT9

Note: *See Figure 25 for the dimensions and the item locations referenced in steps 1 through 5.*

1. At the EOI mounting location, mark the 4.00" by 3.63" hole and the four 3/16" screw holes.

2. Cut the 4.00" by 3.63" rectangular hole.

3. Drill the four 3/16" screw holes.

4. Attach and secure the EOI to the front side of the mounting location using the four 6-32 x 5/16" pan head screws, the #6 split lock washers, and the #6 flat washers.

5. Connect the extension cable.

EOI Mounting Dimensions

Figure 25. EOI Mounting Dimensions.

H9 ASD Installation and Operation Manual

EOI Remote Mounting Using the ASD-MTG-KIT9

Note: See Figure 26 for the dimensions and the item locations referenced in steps 1 through 6.

1. At the EOI mounting location, mark the 4.60" by 4.50" hole and the four 11/32" screw holes.

2. Cut the 4.60" by 4.50" rectangular hole.

3. Drill the four 11/32" holes for the Bezel Plate mount.

4. Attach and secure the Bezel Plate to the front side of the mounting location using the four 10-32 hex nuts, #10 split lock washers, and the #10 flat washers.

5. Attach and secure the EOI to the front side of the Bezel Plate using the four 6-32 x 5/16" pan head screws, #6 split lock washers, and the #6 flat washers.

6. Connect the extension cable.

EOI ASD-MTG-KIT9 Mounting Dimensions

Figure 26. EOI Bezel Plate Mounting Dimensions.
Command Mode and Frequency Mode Control

Command control includes instructions such as **Stop**, **Run**, **Jog**, etc. The source of the **Command** signal must be established for normal operation.

Frequency commands control the output speed of the H9 ASD. The source of the frequency control signal must be established for normal operation.

The source of the command control and frequency control may be either internal or external. Once the source signal is selected for either function, the system may be configured to use the selected signal all of the time or switch under user-defined conditions.

Command and **Frequency** control may be carried out using any one of several control methods (signal sources) or combinations thereof. In the event that multiple control commands are received, the signal sources are assigned priority levels. The primary control method for **Command** and **Frequency** control uses the settings of F003 and F004, respectively.

Command Control (F003)

The **Command Mode** selection of F003 establishes the primary source of the command input for the ASD. However, the **Override** feature may supersede the F003 setting as indicated in Table 3.

Table 3 on pg. 38 shows the hierarchy of the control sources managed by the **Override** function. The level of the control item of the hierarchy is listed from left to right, most to least, respectively. As indicated in the table, the **Override** setting may supersede the F003 setting.

```
                                    01:06
Standard Mode Selection
(F003) Command Mode
Selection

Terminal Block
```

Placing the EOI in the **Local** mode selects the **RS485** (2-wire) as the **Command Mode** control source. **Local** mode operation may be superseded by other **Override** settings.

Example: With the EOI set to **Local**, **Communication Board** input or **RS485** (4-wire) input will supersede EOI control input.

The remaining control sources may be placed into the **Override Mode** using communications.

The source of the **Command** control signal may be selected by:

• The F003 setting,

• Placing an item from the **Command** signal source selections in the **Override Mode** via communications, or

• Placing the EOI in the **Local** mode (places only the RS485 [2-wire] or the RS485 [4-wire] in the Override Mode).

Possible **Command** signal source selections include the following:

• Terminal Block (default),

• EOI (Keypad),

• RS485,

• Communication Option Board, or

• F003 setting (is used if no signal sources are in the Override Mode).

Note: *The **Terminal Board** is placed in the **Override Mode** for **Command** functions by assigning a discrete terminal to **Command Terminal Board Priority** and connecting the terminal to **CC**. Once activated (Run command required), the **Terminal Board** settings will be used for **Override Command** control (F, R, Preset Speeds, etc.).*

Frequency Control (F004)

02:06
Standard Mode Selection
(F004) Frequency Mode 1
RR

The **Frequency Mode 1** (or the Frequency Mode 2) setting establishes the user-selected source of the frequency-control input for the H9 ASD. The signal source selected here is used for speed control unless the **Reference Priority Selection** parameter is configured to switch this setting automatically (see F200) or if the **Override** feature is enabled.

Table 3 on pg. 38 shows the hierarchy of the control sources managed by the **Override** function. The level of the control item of the hierarchy is listed from left to right, most to least, respectively. As indicated in the table, the **Override** setting may supersede the selection at F004.

Placing the EOI in the **Local** mode selects the **RS485** (2-wire) as the **Frequency Mode 1** control source. **Local** mode operation may be superseded by other **Override** settings.

Example: With the EOI set to **Local**, the **Communication Board** input or the **RS485** (4-wire) input will supersede EOI control input.

The remaining control sources may be placed into the **Override Mode** using communications.

The source of the **Frequency** control signal may be selected by:

- The F004 setting,
- Placing an item from the **Frequency** control source selections in the **Override Mode** via communications, or
- Placing the EOI in the **Local** mode (places only the **RS485 [**2-wire] in the Override Mode).

Possible **Frequency** control source selections include the following:

- Communication Board,
- RS485,
- EOI (Keypad),
- Terminal Block (the default setting), or
- F004 setting (used if no other items are in the Override mode).

Note: *The **Terminal Board** is placed in the **Override Mode** for **Speed** control functions by assigning a discrete terminal to **V/I Terminal Priority** and connecting the terminal to **CC**. Once the discrete terminal is activated, V/I is used as the **Terminal Board Override** control item.*

Command and Frequency Control Selections

The user may select only one **Command** source and only one source for **Frequency** control. The default settings for **Command** and **Frequency** control are **Terminal Block** and **RR**, respectively.

The H9 ASD has a command register for each item listed as a **Command** or **Frequency** source. The registers store the **Override** setting for each control source. The registers are continuously scanned to determine if any of the listed items are in the **Override Mode**.

For each scan cycle, the command registers of the control sources are scanned for the **Override** setting in the order that they are listed in Table 3. The first item of the **Command** section and the first item of the **Frequency** section detected as being in the **Override Mode** will be used for **Command** and **Frequency** control, respectively. If no items are detected as being in the **Override Mode**, the settings of F003 and F004 will be used for **Command** and **Frequency** control, respectively.

Any or all of the **Command** and **Frequency** control input sources may be placed in the **Override Mode**.

Placing the H9 ASD in the **Local** mode (Local/Remote LED on) via the EOI places the **RS485** (2-wire) control selection in the **Override Mode** for **Command** and **Frequency** input (see the section titled Override Operation on pg. 38 for the proper setting). The **Local/Remote** control **Override** feature for **Command** and **Frequency** (or either) may be enabled/disabled at Program ⇒ Utilities ⇒ Prohibition ⇒ **Local/Remote Key** (Command or Frequency) **Override**.

Communications may be used to place the remaining **Command** and eligible **Frequency** control input sources in the **Override Mode**. Once placed in the **Override Mode** this setting is valid until it is cancelled, the power supply is turned off, or the H9 ASD is reset.

Override Operation

The signal sources of Table 3 are scanned from left to right in the order that they are listed to determine which input sources are in the **Override Mode** (active Command or Frequency command present). The first item detected as having the **Override** function turned on is the selection that is used for **Command** or **Frequency** control input.

The **Override** control setting supersedes the setting of the **Command** mode setting (F003) and the **Frequency** mode setting (F004). However, the F003 and F004 settings will be used in the event that the register scan returns the condition that none of the listed items have the **Override** feature turned on or a discrete input terminal is set to **Serial/Local Switch** and is activated.

Command and Frequency-Control Override Hierarchy

Table 3 lists the input conditions and the resulting output control source selections for **Command** and **Frequency** control **Override** operation.

From left to right in Table 3, the active signal source has priority over any adjacent active signal sources to the right.

Table 3. Command and Frequency Control Hierarchy.

1	2	3	4	5	6	Priority Level
Forced F003/ F004 by I/P Terminal (Assign to Serial/ Local Switch)	**Comm. Board**	**RS485** (4-Wire)	**RS485** (2-Wire)	**Terminal Board** (Binary/BCD Input)	**F003/F004**	**Command/ Frequency Mode**
1	X	X	X	X	X	F003/F004 Setting
0	**1**	X	X	X	X	Communication Board
0	0	**1**	X	X	X	RS485 (4-Wire)
0	0	0	**1**	X	X	RS485 (2-Wire)
0	0	0	0	**1**	X	Terminal Board
0	0	0	0	0	**F003/F004 Setting**	F003/F004 Setting
Note: **1** *= Override feature is turned on for that control input source;* **0** *= Override Off;* **X** *= Don't Care.*						

Command Control Selections

The following is a listing with descriptions of the **Command Mode** (F003) selections (Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ **Command Mode Selection**).

Settings:

		01:06
Standard Mode Selection		
(F003) Command Mode Selection		
Terminal Block	⟵————	(Default)

0 — Terminal Block

Allows for **Command** control input via the **Terminal Board**.

1 — Not Used

Unused.

2 — EOI (Keypad)

Used for EOI command control.

3 — RS485

Used to transfer commands to the ASD via 4-wire RS485.

4 — Communication Option Board

Use this setting if using the optional **Communication Board** for command control.

Frequency Control Selections

The following is a listing with descriptions of the **Frequency Mode** (F004) selections (Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ **Frequency Mode 1**).

Settings:

		02:06
Standard Mode Selection		
(F004) Frequency Mode 1		
RR	⟵————	(Default)

1 — V/I

Used when a 0 to 10 VDC analog input or a 0 – 20 mADC current input is used as the speed control input. Only one input signal type may be used at a time. Set SW301 to the desired signal type.

2 — RR

Used for a 0 to 10 VDC analog input signal.

3 — RX

Used for a -10 to +10 VDC analog input signal.

4 — Not Used

Unused.

5 — EOI (Keypad)

Used for EOI frequency control.

6 — RS485

Used to transfer speed commands to the ASD via 4-wire RS485.

7 — Communication Option Board

Use this setting if using the optional **Communication Board** for frequency control.

8 — RX2 Option (AI1)

Used for a -10 to +10-volt DC analog input signal.

9 — Option V/I

Allows for the use of the optional voltage/current frequency-control interface.

10 — UP/DOWN Frequency

A discrete terminal may be configured to increase or decrease the speed of the motor by momentarily connecting the assigned discrete input terminal to **CC**. See F264 on pg. 128 for further information on this feature.

11 — Pulse Input Option

Used to allow the system to use a pulsed input for frequency control. See PG Input Point 1 Setting on pg. 122 for further information on this feature.

12 — Pulse Input (motor CPU)

Used to allow the system to use a pulsed input for frequency control. See PG Input Point 1 Setting on pg. 122 for further information on this feature.

13 — Binary/BCD Input Option

Allows for the discrete terminals to be used for frequency-control input. Input may be provided as binary or binary coded decimal.

System Configuration and Menu Options

Root Menus

The **Mode** key accesses the three primary modes of the H9 ASD: the **Frequency Command** mode, the **Monitor** mode, and the **Program** mode. From either mode, press the **Mode** key to loop through to the other two modes (see Figure 27). While in the **Frequency Command** mode, pressing the **ESC** key toggles the menu to and from the EOI **Command** mode and the **Frequency Command** mode.

The **Alarm** or **Fault** information will be displayed in the event of an active **Alarm** or **Fault**. **Alarm** text will be displayed on the **Frequency Command** screen and on the LED screen when active. **Fault** information will be displayed via the **Fault** screen. See Alarms and Trips on pg. 244 for more information on **Alarms** and **Trips**.

Figure 27. H9 ASD Root Menu Navigation.
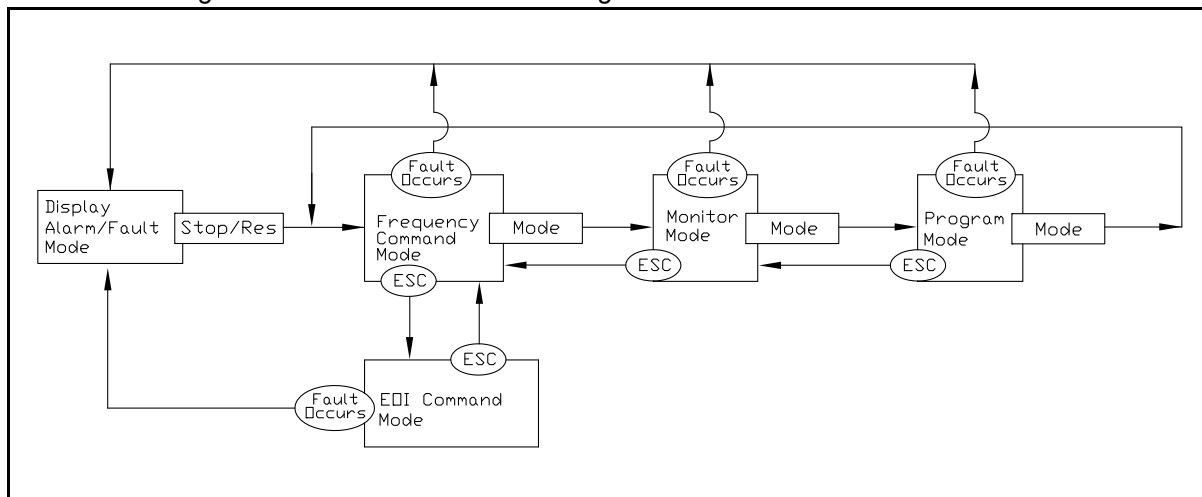

Frequency Command Mode

Frequency Setting

While operating in the **Local** mode (**Local** LED is illuminated on the EOI), the running frequency of the motor may be set from the **Frequency Command** screen. Using the **Rotary Encoder**, enter the **Frequency Command** value, connect **ST** to **CC**, and provide a **Run** command (F and/or R) and then press the **Run** key. The motor will run at the **Frequency Command** speed and may be changed while running. See Figure 22 on pg. 32 and Operation (Local) on pg. 73 for more information on the **Frequency Command** mode.

EOI Command Mode

The **EOI Command** mode is accessed by pressing the **ESC** key from the **Frequency Command** screen.

The control settings of the **EOI Command** menu are effective for **EOI** control only.

The **EOI Command** mode provides quick access to the following menu parameters:

Direction — **Forward** or **Reverse**.

Stop Pattern — The **Decel Stop** or **Coast Stop** settings determines the method used to stop the motor when using the **Stop-Reset** key of the **EOI**. The **Decel Stop** setting enables the **Dynamic Braking** system setup at F304 or the **DC Injection Braking** system setup at F250, F251, and F252. The **Coast Stop** setting allows the motor to stop at the rate allowed by the inertia of the load.

*Note: The **Stop Pattern** setting has no effect on the **Emergency Off** settings of F603.*

V/f Group — One of 4 **V/f** profiles may be selected and run. Each **V/f** profile is comprised of 4 user settings: **Base Frequency**, **Base Frequency Voltage**, **Manual Torque Boost**, and **Electronic Thermal Protection**. Expanded descriptions of these parameters may be found in the section titled Direct Access Parameter Information on pg. 76.

Accel/Decel Group — One of 4 **Accel/Decel** profiles may be selected and run. Each of the **Accel/Decel** profiles is comprised of three user settings: **Acceleration**, **Deceleration**, and **Pattern**. Expanded descriptions of these parameters may be found in the section titled Direct Access Parameter Information on pg. 76 (or see F009).

Feedback in Panel Mode — This feature enables or disables the **PID** feedback function.

Torque Limit Group — This parameter is used to select 1 of 4 preset positive torque limits to apply to the active motor (of a multiple motor configuration). The settings of profiles 1 – 4 may be setup at F441, F444, F446, and F448, respectively.

Monitor Mode

The **Monitor** mode allows the user to monitor motor performance variables, control settings, and configuration data during motor operation. There are 43 items that may be monitored from this mode. The items are listed and described below.

> *Note:* *The **Monitor** mode is a read-only mode. The settings cannot be changed from the **Monitor** mode. For information on how to change the values, see the section titled Default Setting Changes on pg. 74.*

> *Note:* *Any two of the <u>Underlined</u> monitored items may be selected for display at the **Frequency Command** screen while running via Program ⇒ Utilities ⇒ Main Monitor Selections.*

> *Note:* *The F701 setting will determine if the Current and Voltage values displayed appear as **A** (Amps) and **V** (Voltage), or if the value is shown as a % (percentage) of the ASD rating.*

Frequency at Trip — Displays the at-trip frequency.

Frequency Reference — Displays the **Frequency Setpoint**.

Output Current — Displays the **Output Current** as a percentage of the rated capacity of the H9 ASD.

DC Bus Voltage — Displays the **Bus Voltage** as a percentage of the rated capacity of the H9 ASD.

Output Voltage — Displays the **Output Voltage** as a percentage of the rated capacity of the H9 ASD.

AM Output — Displays the **AM** output terminal value for the function assigned to the **AM** terminal.

FM Output — Displays the **FM** output terminal value for the function assigned to the **FM** terminal.

Motor OL (Overload) Real — Displays the real-time **Motor Overload** value as a percentage of the rated capacity of the motor.

Motor OL (Overload) Trip — Displays the **Motor Overload Trip** value as a percentage of the rated capacity of the motor.

Motor Load — Displays the real-time **Motor Load** as a percentage of the rated capacity of the motor.

ASD OL (Overload) Real — Displays the real-time **ASD Overload** as a percentage of the rated capacity of the H9 ASD.

ASD OL (Overload) Trip — Displays the **ASD Overload Trip** value as a percentage of the rated capacity of the ASD.

ASD Load — Displays the **ASD Load** as a percentage of the rated capacity of the H9 ASD.

Run Time — Displays the **Cumulative Run Time** in hours.

Compensation Frequency — Displays the **Output Frequency** after the application of the slip compensation correction value (Post Compensation Frequency).

DBR OL (Overload) Real — Displays the real-time **DBR Overload** value as a percentage of the **Dynamic Braking Resistor** capacity.

DBR OL (Overload) Trip — Displays the **DBR Overload Trip** value as a percentage of the **Dynamic Braking Resistor** capacity.

DBR Load — Displays the **DBR Load** as a percentage of the **Dynamic Braking Resistor** capacity.

Feedback (Inst) — Provides a status of the **Real Time Feedback** in Hz.

Feedback (1 Second) — Provides a status of the **1-Second Averaging** feedback in Hz.

Torque — Displays the **Output Torque** as a percentage of the rated capacity of the H9 ASD.

Torque Reference — Displays the **Torque Reference** as a percentage of the maximum torque available.

Torque Current — Displays the torque-producing current value.

Excitation Current — Displays the current value required to produce the excitation field.

PID Feedback — Provides a status of the **PID Real Time Feedback** in Hz.

Input Power — Displays the **Input Power** in Kilowatts (kW).

Output Power — Displays the **Output Power** in Kilowatts (kW).

Pattern Group Number — Displays the active **Pattern Run Group Number**.

Pattern Group Cycle — Displays the cycle number of the active **Pattern Run Group**.

Pattern Group Preset — Displays the active **Preset Speed** being run of the active **Pattern Run Group**.

Pattern Time — Displays the remaining time for the active **Pattern Run Group**.

RR — Displays the **RR** input value as a percentage of the full range of the **RR** value (potentiometer input).

V/I — Displays the **V/I** input setting as a percentage of the full range of the **V/I** value.

Note: *The isolated V/I input terminal may receive **Current** or **Voltage** to control the output speed or the output torque. The input signal type must be selected at SW301 on the **Terminal Board**.*

The V input setting of SW301 is used for the 0 – 10 VDC analog input signal and the I input setting of SW301 is used for the 0 – 20 mA analog input signal. Either may be used as a frequency or torque command source. See parameter F201 for more information on the setup of this terminal.

RX — Displays the **RX** input setting as a percentage of the full range of the **RX** value (-10 to +10 VDC input).

RX2 Option (AI1) — Displays the **RX2** input setting as a percentage of the full range of the **RX2** value.

Note: *The RX2 function is available on the **Expansion IO Card Option 1** option board (P/N ETB003Z) only.*

Trip Code — Displays **None** if there are no errors, or displays one of the associated **Fault Codes** listed in Table 14 on page 248 if there is an active **Fault** (e.g., **E** = **Emergency Off**).

Past Trip 1 — This function records and displays the last trip incurred. Subsequent trips will replace **Past Trip 1**. As trip records are replaced they are shifted to the next level of the **Past Trip** locations until being deleted (i.e., **Past Trip 1** is moved to **Past Trip 2** and then to **Past Trip 3** until being shifted out of **Past Trip 4**). Once shifted out of **Past Trip 4** the record is deleted. If no trips have occurred since the last reset, **No Error** is displayed for each trip record.

Past Trip 2 — Past trip information or **None**.

Past Trip 3 — Past trip information or **None**.

Past Trip 4 — Past trip information or **None**.

Note: *An improper H9 ASD setup may cause some trips — reset the H9 ASD to the*
__Factory Default__ settings before pursuing a systemic malfunction (Program ⇒
Utilities ⇒ Type Reset ⇒ __Reset to Factory Settings__).

Direction — Displays the **Direction** command (forward/reverse).

Discrete Input Terminals — Displays the status (activated = reverse video) of the discrete input terminals of the **Terminal Board**.

Discrete Output Terminals — Displays the status (activated = reverse video) of the discrete output lines of the **Terminal Board**.

Main Monitor Selections

Two (2) Monitor Mode items may be selected from the **Main Monitor Selections** screen to be displayed on the **Frequency Command** screen while the H9 ASD is running.

The selected items, along with their real-time values, are displayed on the **Frequency Command** screen while running. Not all **Monitor Mode** items are available for display on the **Frequency Command** screen. The available items are underlined on pg. 43 and pg. 44.

Any two of the underlined items may be selected from the listing at Program ⇒ Utilities ⇒ **Main Monitor Selections**. Select an item from the **Monitor 1** listing and another item from the **Monitor 2** listing to be displayed as shown in Figure 22 on pg. 32.

Program Mode Menu Navigation

The following table lists the menu items of the **Program** mode and maps the flow of the menu selections. The **Parameter Numbers** for the listed functions are provided where applicable.

The functions listed may be viewed, or selected and changed as mapped below or via the **Direct Access** method: Program ⇒ Direct Access ⇒ *Applicable Parameter Number*.

Program Mode Menu Navigation			
Primary Menu	**Sub Menu**	**Parameter Name**	**Parameter Number**

System Operation

Initial Setup

Upon initial system power up, the **Startup Wizard** starts automatically. The **Startup Wizard** assists the user with the initial configuration of the input power settings and the output parameters of the H9 ASD.

The **Startup Wizard** may also be selected and run from the Program menu after the initial startup, if required.

The **Startup Wizard** querys the user to select one of the following items:

Run Now? ⇒ Continue on to item 1 below.

Run Next Time? ⇒ Go to Program **Mode**.

Manually Configure? ⇒ Go to **Finish** screen and click **Finish**.

Startup Wizard Parameters

Startup parameter settings may be viewed or changed. Change the parameter setting and click **Next**. Or click **Next** without making any changes to go to the next startup parameter.

See the section titled Startup Wizard Parameter Requirements on pg. 71 for further information on the **Startup Wizard** parameters.

Click **Finish** to close the **Startup Wizard** when finished.

1. The Voltage and Frequency Rating of the Motor (Must make a selection to continue or click **Finish**).

2. The Upper-Limit Frequency.

3. The Lower-Limit Frequency.

4. The Automatic Acceleration/Deceleration Setting.

5. The Acceleration Time.

6. The Deceleration Time.

7. The Volts per Hertz Setting.

8. The Motor Current Rating.

9. The Motor RPM.

10. The Command Source.

11. The Frequency Reference Source.

12. The Display Unit.

13. Wizard: Finish.

Startup Wizard Parameter Requirements

The **Startup Wizard** queries the user for information on the I/O signal parameters, control, and the EOI display settings of the ASD. The ASD may also be setup by directly accessing each of the startup settings via the Program menu or the associated **Direct Access Numbers** (see the section titled Direct Access Parameter Information on pg. 76).

Upon initial system power up, the **Startup Wizard** starts automatically. It may also be run from the Program menu after startup, if required. The user is queried to either (**1**) **Run Now**, (**2**) **Run Next Time**, or (**3**) **Manually Configure** the ASD.

Select **Run Now** to start the **Startup Wizard**. The wizard will assist the user with the configuration of the **H9 Adjustable Speed Drive** using the user-input screens below starting with the Voltage and Frequency Rating of the Motor.

Select **Run Next Time** to return to the Program menu. The system will default to the **Startup Wizard** on the next power up.

Select **Manually Configure** to go to the **Finish** box. Click **Finish** to return the system to the **Frequency Command** screen.

Voltage and Frequency Rating of the Motor

Motors are designed and manufactured to be operated within a specific voltage and frequency range. The voltage and frequency specifications for a given motor may be found on the nameplate of the motor. Highlight and click on the voltage and frequency of the motor being used.

Upper-Limit Frequency

This parameter sets the highest frequency that the ASD will accept as a frequency command or frequency setpoint. The ASD may output frequencies higher than the **Upper-Limit Frequency** (but, lower than the **Maximum Frequency**) when operating in the **PID Control** mode, **Torque Control** mode, or the **Vector Control** modes (sensorless or feedback).

Lower-Limit Frequency

This parameter sets the lowest frequency that the ASD will accept as a frequency command or frequency setpoint. The ASD will output frequencies lower than the **Lower-Limit Frequency** when accelerating to the lower-limit or decelerating to a stop. Frequencies below the **Lower-Limit** may be output when operating in the **PID Control** mode, **Torque Control** mode, or the **Vector Control** modes (sensorless or feedback).

Automatic Acceleration/Deceleration

When **Automatic ACC/DEC** is chosen, the ASD adjusts the acceleration and deceleration rates according to the applied load. The minimum accel/decel time may be set using F508. The motor and the load must be connected prior to selecting **Automatic Accel/Decel**.

Select **Manual** to allow the settings of F009 and F010 to control the accel/decel, respectively. The acceleration and deceleration times range from 12.5% to 800% of the programmed values for the active acceleration time.

Select **Automatic ACC Only** to allow for the acceleration rate to be controlled automatically only.

Acceleration Time

This parameter specifies the time in seconds for the output of the ASD to go from 0.0 Hz to the **Maximum Frequency** for the **1 Acceleration** profile. The **Accel/Decel Pattern** may be set using F502.

Deceleration Time

This parameter specifies the time in seconds for the output of the ASD to go from the **Maximum Frequency** to 0.0 Hz for the **1 Deceleration** profile. The **Accel/Decel Pattern** may be set using F502.

Volts per Hertz Setting

This function establishes the relationship between the output frequency and the output voltage of the ASD.

Settings:

Constant Torque

Voltage Decrease Curve

Automatic Torque Boost

Sensorless Vector Control (Speed)

Sensorless Vector Control (Speed/Torque Switching)

V/f 5-point Curve (Go to F190 to configure the V/f 5-Point Settings)

PM Drive (Permanent Magnet)

PG Feedback Vector Control (Speed)

PG Feedback Vector Control (Speed/Torque Switching)

Motor Current Rating

This parameter allows the user to input the full load amperage (FLA) of the motor. This value is found on the nameplate of the motor and is used by the ASD to determine the **Thermal Overload Protection** setting for the motor.

Motor RPM

This parameter is used to input the (nameplated) rated speed of the motor.

Command Source

This selection allows the user to establish the source of the **Run** commands. Run commands are **Run**, **Stop**, **Jog**, etc.

Settings:

Use Terminal Block

Use EOI (Keypad)

Use RS485

Use Communication Option Board

Frequency Reference Source

This selection allows the user to establish the source of the **Frequency** command.

Settings:

Use V/I

Use RR

Use RX

EOI (Keypad)

RS485

Communication Option Board

RX2 Option (AI1)

Option V/I

UP/DOWN Frequency

Pulse Input (Option)

Pulse Input (Motor CPU)

Binary/BCD Input (Option)

Display Unit

This parameter sets the unit of measurement for current and voltage values displayed on the EOI.

Wizard: Finish

This is the final screen of the **Startup Wizard**. The basic parameters of the ASD have been set. Click **Finish** to return to the **Program** mode. Additional application-specific programming may be required.

Operation (Local)

Note: *See the section titled EOI Features on pg. 30 for information on **Remote** operation.*

To turn the motor on perform the following:

1. Connect the **CC** terminal to the **ST** terminal.

2. Press the **Mode** key until the **Frequency Command** screen is displayed.

3. Press the **Local/Remote** key to enter the **Local** mode (green **Local** LED illuminates).

4. Turn the **Rotary Encoder** clockwise until the desired **Frequency Command** value is displayed in the **SET** field of the LCD screen.

5. Press the **Run** key and the motor runs at the **Frequency Command** value.

Frequency Command Screen

Note: *The speed of the motor may be changed while the motor is running by using the **Rotary Encoder** to change the **Frequency Command** value.*

6. Press the **Stop-Reset** key to stop the motor.

Default Setting Changes

To change a default parameter setting go to the root level of the Program menu. Turn the **Rotary Encoder** until the desired parameter group is within the cursor block. Press the **Rotary Encoder** to select an item or to access a subgroup (repeat if required until reaching the parameter to be changed).

Press the **Rotary Encoder** to enter the **Edit** mode and the value/setting takes on the reverse video format (dark background/light text). Turn the **Rotary Encoder** to change the parameter value/setting.

Press **ESC** key while the new parameter setting is still in the reverse video mode to exit the menu without saving the change or press the **Rotary Encoder** while the parameter setting is in the reverse video mode to accept the new setting.

For a complete listing of the Program mode menu selections, see the section titled Program Mode Menu Navigation on pg. 46. Program menu items are listed and mapped for convenience. The **Direct Access Numbers** are listed where applicable.

The default settings may also be changed by entering the **Parameter Number** of the setting to be changed at the **Direct Access** menu (Program $\Rightarrow$ Direct Access $\Rightarrow$ *Applicable Parameter Number*). A listing of the **Direct Access Numbers** and a description of the associated parameter may be found in the section titled Direct Access Parameter Information on pg. 76.

A listing of all parameters that have been changed from the default setting may be viewed sequentially by accessing the **Changed From Default** screen (Program $\Rightarrow$ Utilities $\Rightarrow$ **Changed From Default**).

The **Changed From Default** feature allows the user to quickly access the parameters that are different from the factory default settings or the post-Reset settings. Once the **Changed From Default** screen is displayed, the system scrolls through all of the system parameters automatically and halts once reaching a changed parameter.

Once stopped at a changed parameter, the **Rotary Encoder** may be clicked once clockwise to continue scrolling forward or clicked once counterclockwise to begin scrolling in reverse. With each click of the **Rotary Encoder** from a stop, the system scrolls through the parameters and stops at the next parameter that has been changed.

Press the **Rotary Encoder** while stopped at a changed parameter to display the settings of the changed parameter. Press the **Rotary Encoder** to enter the **Edit** mode — the parameter value/setting takes on the reverse video format (dark background/light text).Turn the **Rotary Encoder** to change the parameter setting.

Press the **ESC** key while the setting is in the reverse video format to exit the **Edit** mode without saving the change and to resume the **Changed From Default** search. Or press the **Rotary Encoder** while the setting is in the reverse video format to save the change. Press **ESC** to return to the **Changed From Default** search.

Pressing **ESC** while the system is performing a **Changed From Default** search terminates the search. Pressing **ESC** when finished searching (or halted at a changed parameter) takes the menu back one level.

Note: *Communications setting changes will require that the power be removed and then re-applied for the changes to take affect.*

Note: *Parameter **F201** was changed to create the example shown in Figure 28.*

Figure 28. Changed From Default Screen.

H9 ASD Installation and Operation Manual
Save User Settings

A profile of an existing setup may be saved and re-applied when required by using the **Save User Setup** feature. This function is carried out via Program $\Rightarrow$ Utilities $\Rightarrow$ Type Reset $\Rightarrow$ **Save User Settings**.

With the initial setup saved, troubleshooting and diagnostics may be performed and the starting setup may be re-applied when finished via Program $\Rightarrow$ Utilities $\Rightarrow$ Type Reset $\Rightarrow$ **Restore User Settings**.

Note: *EOI settings are not stored or restored using the **Save User Settings** or **Restore User Settings**, respectively (i.e., contrast setting, voltage/current units, display gradient characteristics, etc.). See the section titled Battery Backup on pg. 28 for more information on stored EOI settings.*

Direct Access Parameter Information

The H9 ASD has the ability to allow the user direct access to the motor control functions. There are two ways in which the motor control parameters may be accessed for modification: Program ⇒ *Applicable Menu Path* or Program ⇒ Direct Access ⇒ *Applicable Parameter Number*. Both methods access the parameter via the **Program** mode. Once accessed, the parameter may be viewed or changed.

The **Program** mode allows the user to develop an application-specific motor control profile. Motor control functions may be set to accommodate specific power and timing requirements for a given application. The configurable parameters of the **Program** mode that have user-accessible **Parameter Numbers** are listed and described below.

Note: Parameter selections are preceded by the number used to select an item if using communications to write to a parameter location in memory (i.e., F000 ⇒ 0-Manual, 1- No Trip on Acc/Dec, 2-No trip on Acc Only, etc.).

Note: The setup procedures included within this section may require a Reset before performing the procedure. Application-specific settings may then be performed. The pre-Reset conditions may be saved (see F007).

Note: Communications setting changes will require that the power be removed and then re-applied for the changes to take affect.

Direct Access Parameters/Numbers

Automatic Acceleration/Deceleration

Program ⇒ Fundamental ⇒ Accel/Decel 1 Settings

This parameter is used to enable acceleration and deceleration rates in accordance with the applied load automatically.

The adjusted acceleration and deceleration times range from 12.5% to 800% of the programmed values for **Acceleration Time 1** (F009) and **Deceleration Time 1** (F010).

Settings:

0 — Manual
1 — Automatic ACC/DEC
2 — Automatic ACC Only

Note: The motor and the load must be connected prior to selecting Automatic Acceleration/Deceleration.

Direct Access Number — **F000**
Parameter Type — **Selection List**
Factory Default — **Manual**
Changeable During Run — **No**

Automatic Torque Boost

Program ⇒ Fundamental ⇒ Motor Set 1

This parameter allows the ASD to adjust the output torque in accordance with the applied load automatically. When enabled Autotuning is performed — the motor should be connected before performing an Autotune.

Settings:

0 — Disabled
1 — Automatic Torque Boost + Autotuning
2 — Sensorless Vector Control + Autotuning

Direct Access Number — **F001**
Parameter Type — **Selection List**
Factory Default — **Disabled**
Changeable During Run — **No**

Command Mode Selection

Program ⇒ Fundamental ⇒ Standard Mode Selection

The **Command Mode Selection** establishes the source of the command input for the ASD. Command inputs include **Run**, **Stop**, **Forward**, etc. The **Override** feature may supersede the **Command Mode Selection** setting (see Command Mode and Frequency Mode Control on pg. 36).

Settings:

    0 — Terminal Block
    1 — Not Used
    2 — EOI (Keypad)
    3 — RS485
    4 — Communication Option Board

Direct Access Number —   **F003**

Parameter Type — **Selection List**

Factory Default — **Terminal Block**

Changeable During Run — **No**

Frequency Mode 1

Program ⇒ Fundamental ⇒ Standard Mode Selection

The **Frequency Mode 1** setting establishes the source of the frequency-control input for the ASD. The **Frequency Mode 2** setting or the **Override** feature may supersede the **Frequency Mode 1** setting.

Note: *Only **Bolded** items from the **Settings** list below may be placed in the **Override Mode**. See the section titled Command Mode and Frequency Mode Control on pg. 36 for more information on the **Override** feature.*

Settings:

    1 — **V/I**
    2 — RR
    3 — RX
    5 — **EOI** (Keypad)
    6 — **RS485**
    7 — Communication Option Board
    8 — RX2 Option (AI1)
    9 — **Option V/I**
    10 — UP/DOWN Frequency
    11 — Pulse Input (Option)
    12 — Pulse Input (Motor CPU)
    13 — Binary/BCD Input (Option)

Direct Access Number —   **F004**

Parameter Type — **Selection List**

Factory Default — **RR**

Changeable During Run — **No**

FM Output Terminal Function

Program $\Rightarrow$ Terminal $\Rightarrow$ Analog Output Terminals

This parameter is used to set the output function of the **FM** analog output terminal. The **FM** output terminal produces an output current or voltage that is proportional to the magnitude of the function assigned to this terminal (select current or voltage at F681). The available assignments for this output terminal are listed in Table 6 on pg. 237.

Note: *To read **voltage** at this terminal connect a 100 – 500Ω resistor from the **FM** (+) terminal to the **CC** (-) terminal. Using a voltmeter read the voltage across the 100 – 500Ω resistor.*

*To read **current** at this terminal connect a 100 – 500Ω resistor from the **FM** (+) terminal through a series Ammeter to the **CC** (-) terminal.*

*The **FM** analog output has a maximum resolution of 1/1024 and a maximum load rating of 500 ohms.*

FM Terminal Setup Parameters

F005 — Set FM Function
F006 — Calibrate FM Terminal
F681 — Voltage/Current Output Switching Selection
F682 — Output Response Polarity Selection
F683 — Set Zero Level

Direct Access Number — F005
Parameter Type — **Selection List**
Factory Default — **Output Frequency**
Changeable During Run — **Yes**

FM Output Terminal Adjustment

Program $\Rightarrow$ Terminal $\Rightarrow$ Analog Output Terminals

This parameter is used to calibrate the **FM** analog output.

To calibrate the **FM** analog output, connect a meter (current or voltage) as described at F005.

With the drive running at a known value (e.g., output frequency), adjust this parameter until the assigned function produces the desired DC level output at the **FM** output terminal.

See F005 for more information on this setting.

Direct Access Number — F006
Parameter Type — **Numerical**
Factory Default — **493**
Changeable During Run — **Yes**
Minimum — 1
Maximum — 1280

Type Reset

Program ⇒ Utilities

This feature assists the user when performing fault analysis or by allowing a quick system setup change when required. Performing a **Type Reset** results in one of the following user-selected post-Reset configurations.

Settings:

  0 — None
  1 — 50 Hz Setting
  2 — 60 Hz Setting
  3 — Reset to Factory Settings
  4 — Clear Past Trips
  5 — Clear Run Timer
  6 — Initialize Typeform
  7 — *Save User Settings
  8 — Restore User Settings
  9 — Clear Cumulative Fan Timer
  10 — Accel/Decel Time Setting 0.01 – 600.0 Seconds
  11 — Accel/Decel Time Setting 0.1 – 6000.0 Seconds
  12 — Update EOI Firmware
  13 — Set EOI Memory to Default
  14 — Save User Settings to EOI
  15 — Restore User Settings from EOI

> *Note:* User settings that are stored in the memory of the EOI are not saved via the **Save User Settings** selection. The unsaved functions include the **EOI Option Setups**, (Utilities ⇒) **Display Parameters**, and (Monitor Setup ⇒) **Scrolling Monitor Select**.

Direct Access Number —   **F007**
Parameter Type — **Selection List**
Factory Default — **None**
Changeable During Run — **No**

Forward/Reverse Run Selection

Program ⇒ Fundamental ⇒ Standard Mode Selection

While operating in the **Local** mode, this parameter sets the direction of motor rotation.

From the **Frequency Command** screen press the **ESC** key. At the subsequent **EOI Command** screen select the **Direction** field and change the setting. Press the **Rotary Encoder** and the new setting will be in effect.

This setting will not override parameter F311 (Forward/Reverse Disable).

If either direction is disabled via parameter F311, the disabled direction will not be recognized if commanded by the EOI. If both directions are disabled via parameter F311, the direction command from the EOI will determine the direction of the motor rotation.

Settings:

  0 — Forward
  1 — Reverse
  2 — Forward (EOI-Switchable F/R)
  3 — Reverse (EOI-Switchable F/R)

Direct Access Number —   **F008**
Parameter Type — **Selection List**
Factory Default — **Forward**
Changeable During Run — **Yes**

Acceleration Time 1

Program ⇒ Fundamental ⇒ Accel/Decel 1 Settings

This parameter specifies the time in seconds for the output of the ASD to go from 0.0 Hz to the **Maximum Frequency** for the **1 Acceleration** profile. The Accel/Decel pattern may be set using F502. The minimum Accel/Decel time may be set using F508.

Note: *An acceleration time shorter than that which the load will allow may cause nuisance tripping and mechanical stress to loads. **Automatic Accel/Decel**, **Stall**, and **Ridethrough** settings may lengthen the acceleration times.*

Acceleration

The acceleration rate of a motor is determined by several factors: applied power, applied load, and the physical properties of the motor (winding parameters, motor size, etc.). The ASD will control the first of these factors: input power. The settings of the ASD will control the frequency and amplitude of the applied voltage to the motor.

Under most operating conditions, as the output frequency of the drive goes up so does the output voltage (linear acceleration). The ASD has the ability to modify the relationship between frequency and voltage automatically to produce smoother operation or increased (starting) torque (see F502).

Direct Access Number — F009

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

Changeable During Run — **Yes**

Minimum — 0.1

Maximum — 6000

Units — Seconds

Deceleration Time 1

Program ⇒ Fundamental ⇒ Accel/Decel 1 Settings

This parameter specifies the time in seconds for the output of the ASD to go from the **Maximum Frequency** to 0.0 Hz for the **1 Deceleration** profile. The Accel/Decel pattern may be set using F502.

When operating with the **Automatic Accel/Decel** enabled (F000) the minimum accel/decel time may be set using F508.

Note: *A deceleration time shorter than the load will allow may cause nuisance tripping and mechanical stress to loads. **Automatic Accel/Decel**, **Stall**, and **Ridethrough** settings may lengthen the deceleration times.*

Direct Access Number — F010

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

Changeable During Run — **Yes**

Minimum — 0.1

Maximum — 6000

Units — Seconds

Maximum Frequency

Program ⇒ Fundamental ⇒ Frequency Settings

This setting determines the absolute maximum frequency that the ASD can output.

Accel/Decel times are calculated based on the **Maximum Frequency** setting.

The **Maximum Frequency** is not limited by this setting while operating in the **Drooping Control** mode (see F320 for more information on this setting).

Note: *This setting may not be lower than the **Upper-Limit Frequency** (**F012**) setting.*

Direct Access Number — F011

Parameter Type — **Numerical**

Factory Default — **80.0**

Changeable During Run — **No**

Minimum — 30.0

Maximum — 299.0

Units — Hz

Upper-Limit Frequency	**Direct Access Number —** **F012**
Program ⇒ Fundamental ⇒ Frequency Settings	Parameter Type — **Numerical**
	Factory Default — **(ASD-Dependent)**
This parameter sets the highest frequency that the ASD will accept as a frequency command or frequency setpoint. The ASD may output frequencies higher than the **Upper-Limit Frequency** (but, lower than the **Maximum Frequency**) when operating in the **PID Control** mode, **Torque Control** mode, or the **Vector Control** modes (sensorless or feedback).	Changeable During Run — **Yes**
	Minimum — 0.0
	Maximum — **Max. Freq.** (F011)
	Units — Hz
Note: *This setting may not be higher than the **Maximum Frequency** (F011) setting.*	

Lower-Limit Frequency	**Direct Access Number —** **F013**
Program ⇒ Fundamental ⇒ Frequency Settings	Parameter Type — **Numerical**
	Factory Default — **0.00**
This parameter sets the lowest frequency that the ASD will accept as a frequency command or frequency setpoint. The ASD will output frequencies lower than the **Lower-Limit Frequency** when accelerating to the lower-limit or decelerating to a stop. Frequencies below the **Lower-Limit** may also be output when operating in the **PID Control** mode, **Torque Control** mode, or the **Vector Control** modes (sensorless or feedback).	Changeable During Run — **Yes**
	Minimum — 0.00
	Maximum — **Upper-Limit** (F012)
	Units — Hz

Base Frequency 1	**Direct Access Number —** **F014**
Program ⇒ Fundamental ⇒ Motor Set 1	Parameter Type — **Numerical**
	Factory Default — **60.0**
The **Base Frequency 1** setting is the frequency at which the output voltage of the ASD reaches its maximum setting. The **Base Frequency Voltage 1** parameter is set at F409.	Changeable During Run — **Yes**
	Minimum — 0.0
For proper motor operation, the **Base Frequency** should be set for the nameplated frequency of the motor.	Maximum — **Upper-Limit** (F012)
	Units — Hz

V/f Pattern	**Direct Access Number —** **F015**
Program ⇒ Fundamental ⇒ Frequency Settings	Parameter Type — **Selection List**
	Factory Default — **Constant Torque**
This function establishes the relationship between the output frequency and the output voltage.	Changeable During Run — **No**

Bolded selections use the motor tuning parameters of the drive to properly configure the ASD for the motor being used. If **Load Reactors** or **Long Lead Filters** are used, or if the capacity of the ASD is greater than the motor, manual tuning of the motor parameters may be required for optimum performance.

Settings:

 0 — Constant Torque
 1 — Voltage Decrease Curve
 2 — **Automatic Torque Boost**
 3 — **Sensorless Vector Control (Speed)**
 4 — **Sensorless Vector Control (Speed/Torque Switching)**
 5 — V/f 5-point Curve (Go to F190 to configure the V/f 5-Point Settings)
 6 — PM Drive (Permanent Magnet)
 7 — **PG Feedback Vector Control (Speed)**
 8 — **PG Feedback Vector Control (Speed/Torque Switching)**

Note: *When operating in the **Vector Control** mode the carrier frequency should be set to 2.2 kHz or above.*

Manual Torque Boost 1

Program ⇒ Fundamental ⇒ Motor Set 1

The **Manual Torque Boost 1** function is used to increase the low frequency torque for high-inertia loads by increasing the output voltage at frequencies below ½ of the **Base Frequency 1** (F014) setting.

The value programmed as a boost percentage establishes an output voltage vs. output frequency relationship to be used to start the motor or to provide smoother operation.

Direct Access Number —   F016

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

Changeable During Run — **Yes**

Minimum — 0.0

Maximum — 30.0

Units — %
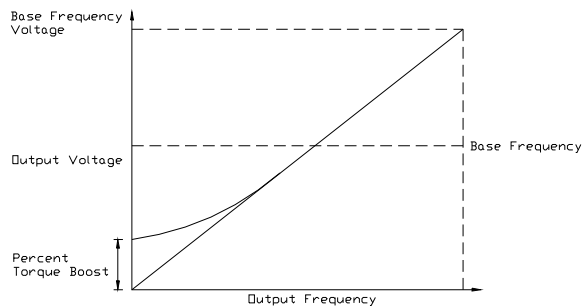

Note: *Setting an excessive **Torque Boost** level may cause nuisance tripping and mechanical stress to loads.*

Motor Overload Protection Configuration

Program ⇒ Protection ⇒ Overload

This parameter is used to protect the motor from an over-current condition. The type of motor being used and the **Overload Stall** setting is selected here to better match the application.

This parameter setting may extend the **Over-Voltage Stall** time settings.

This parameter may be affected by the setting of the **Power Running Stall Continuous Trip Detection Time** (F452).

Direct Access Number —   F017

Parameter Type — **Selection List**

Factory Default — **O/L Trip No Stall**

Changeable During Run — **Yes**

Settings:

  0 — Overload Trip without Stall
  1 — Overload Trip with Stall
  2 — No Overload without Stall
  3 — Stall Only
  4 — V/f Motor-Overload without Stall
  5 — V/f Motor-Overload with Stall
  6 — V/f Motor-No Overload without Stall
  7 — V/f Motor-Stall Only

Preset Speed 1

Program ⇒ Frequency ⇒ Preset Speeds

Up to fifteen (15) output frequency values that fall within the **Lower-Limit** and the **Upper-Limit** range may be programmed into the drive and output as a **Preset Speed**. This parameter assigns an output frequency to binary number 0001 and is identified as **Preset Speed 1**. The binary number is applied to **S1 – S4** of the **Terminal Board** to output the **Preset Speed**.

Perform the following setup to allow the system to receive **Preset Speed** control input at the **S1 – S4** terminals:

1. Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ Command Mode Selection ⇒ **Terminal Block**.

2. Program ⇒ Terminal ⇒ Input Terminals ⇒ **S1** (set to **Preset Speed 1**; LSB of 4-bit count). Repeat for **S2 – S4** (MSB of 4-bit count) as **Preset Speed 2 – 4**, respectively (all **Normally Open**).

3. Program ⇒ Frequency ⇒ Preset Speeds ⇒ **Preset Speed 1** (set an output frequency as **Preset Speed 1**; repeat for **Preset Speeds 2 – 15** as required).

4. Program ⇒ Pattern Run ⇒ Operation Mode ⇒ Preset Speed Operation Mode ⇒ **Enabled/Disabled**.

   Select **Enabled** to use the direction, accel/decel, and torque settings of the **Preset Speed** being run. The torque settings used will be as defined in F170 – F181 and as selected via the associated discrete input terminals **V/f Switching 1** and **2** in Table 5 on pg. 234.

   Select **Disabled** to use the speed setting only of the **Preset Speed** being run.

5. Place the system in the **Remote** mode (Local/Remote LED Off).

6. Provide a **Run** command (connect F and/or R to CC).

Connect **S1** to **CC** to run **Preset Speed 1** (**S1** to **CC** = 0001 binary).

With **S1 – S4** configured to output **Preset Speeds** (F115 – F118), 0001 – 1111 may be applied to **S1 – S4** of the **Terminal Board** to run the associated **Preset Speed**. If bidirectional operation is required, **F** and **R** must be connected to **CC**, and **Preset Speed Operation Mode** must be set to **Enabled** at F560.

With **S1** being the least significant bit of a binary count, the **S1 – S4** settings will produce the programmed speed settings as indicated in the **Preset Speed Truth Table** to the right.

Preset Speeds are also used in the **Pattern Run** mode.

Direct Access Number — F018

Parameter Type — **Numerical**

Factory Default — **0.0**

Changeable During Run — **Yes**

Minimum — **Lower-Limit** (F013)

Maximum — **Upper-Limit** (F012)

Units — Hz

Preset Speed Truth Table

Preset	S4 MSB	S3	S2	S1 LSB	Output
1	0	0	0	1	F018
2	0	0	1	0	F019
3	0	0	1	1	F020
4	0	1	0	0	F021
5	0	1	0	1	F022
6	0	1	1	0	F023
7	0	1	1	1	F024
8	1	0	0	0	F287

11	1	0	1	1	F290
12	1	1	0	0	F291
13	1	1	0	1	F292
14	1	1	1	0	F293
15	1	1	1	1	F294

*Note: 1 = Terminal connected to **CC**.*

Preset Speed 2

Program ⇒ Frequency ⇒ Preset Speeds

This parameter assigns an output frequency to binary number 0010 and is identified as **Preset Speed 2**. The binary number is applied to **S1 – S4** of the **Terminal Board** to output the **Preset Speed** (see F018 for more information on this parameter).

Direct Access Number — F019

Parameter Type — **Numerical**

Factory Default — **0.0**

Changeable During Run — **Yes**

Minimum — **Lower-Limit** (F013)

Maximum — **Upper-Limit** (F012)

Units — Hz

Preset Speed 3

Program ⇒ Frequency ⇒ Preset Speeds

This parameter assigns an output frequency to binary number 0011 and is identified as **Preset Speed 3**. The binary number is applied to **S1 – S4** of the **Terminal Board** to output the **Preset Speed** (see F018 for more information on this parameter).

Direct Access Number — **F020**

Parameter Type — **Numerical**

Factory Default — **0.0**

Changeable During Run — **Yes**

Minimum — **Lower-Limit** (F013)

Maximum — **Upper-Limit** (F012)

Units — Hz

Preset Speed 4

Program ⇒ Frequency ⇒ Preset Speeds

This parameter assigns an output frequency to binary number 0100 and is identified as **Preset Speed 4**. The binary number is applied to **S1 – S4** of the **Terminal Board** to output the **Preset Speed** (see F018 for more information on this parameter).

Direct Access Number — **F021**

Parameter Type — **Numerical**

Factory Default — **0.0**

Changeable During Run — **Yes**

Minimum — **Lower-Limit** (F013)

Maximum — **Upper-Limit** (F012)

Units — Hz

Preset Speed 5

Program ⇒ Frequency ⇒ Preset Speeds

This parameter assigns an output frequency to binary number 0101 and is identified as **Preset Speed 5**. The binary number is applied to **S1 – S4** of the **Terminal Board** to output the **Preset Speed** (see F018 for more information on this parameter).

Direct Access Number — **F022**

Parameter Type — **Numerical**

Factory Default — **0.0**

Changeable During Run — **Yes**

Minimum — **Lower-Limit** (F013)

Maximum — **Upper-Limit** (F012)

Units — Hz

Preset Speed 6

Program ⇒ Frequency ⇒ Preset Speeds

This parameter assigns an output frequency to binary number 0110 and is identified as **Preset Speed 6**. The binary number is applied to **S1 – S4** of the **Terminal Board** to output the **Preset Speed** (see F018 for more information on this parameter).

Direct Access Number — **F023**

Parameter Type — **Numerical**

Factory Default — **0.0**

Changeable During Run — **Yes**

Minimum — **Lower-Limit** (F013)

Maximum — **Upper-Limit** (F012)

Units — Hz

Preset Speed 7

Program ⇒ Frequency ⇒ Preset Speeds

This parameter assigns an output frequency to binary number 0111 and is identified as **Preset Speed 7**. The binary number is applied to **S1 – S4** of the **Terminal Board** to output the **Preset Speed** (see F018 for more information on this parameter).

Direct Access Number — **F024**

Parameter Type — **Numerical**

Factory Default — **0.0**

Changeable During Run — **Yes**

Minimum — **Lower-Limit** (F013)

Maximum — **Upper-Limit** (F012)

Units — Hz

Automatic Function Selection

Program ⇒ Utilities ⇒ Display Parameters

This parameter setting is used to configure multiple parameters with the setting of only one parameter. From the selection below multiple parameters may be set as indicated in the table.

Once set, the selected configuration is placed in effect and remains in effect until this parameter is changed or the individual settings are changed.

Set this parameter to **Disable** to set these parameters individually.

Note: *After performing the desired selection the EOI display returns to **Disabled** though the selected function has been carried out (i.e., without this, if selection **1** is performed, **F004** and **F207** would hold the **RR** terminal setting regardless of attempts to change the settings individually).*

Settings:

    0 — Disabled
    1 — RR
    2 — V/I
    3 — RR or V/II (V/I) Switched via Terminal Board
    4 — EOI Frequency/Terminal Board Command
    5 — EOI = Frequency and Command

Direct Access Number —   **F040**

Parameter Type — **Selection List**

Factory Default — **Disabled**

Changeable During Run — **No**

Related Parameters	Default Settings	User Settings					
		0-Disable	**1**-RR	**2**-V/I	**3**-RR or V/I via TB	**4**-EOI/Freq. CMD/TB	**5**-EOI Freq/ CMD
Command Mode F003	Terminal Board	N/C				Terminal Board	EOI
Frequency Mode 1 F004	RR	N/C	RR	N/C	RR	EOI	
S3 Terminal F117	Preset Speed 3	N/C			Freq. Ref. Priority	N/C	
Frequency Priority F200	Terminal Board	N/C	Terminal Board				
V/I Setup F201	0.0%	N/C		20.0%		N/C	
Frequency Mode 2 F207	V/I	N/C	RR	V/I		EOI	

N/C = No Change — the setting remains as it was before setting parameter F040.

Low-Speed Signal Output Frequency

Program ⇒ Terminal ⇒ Reach Settings

The **Low-Speed Signal Output Frequency** parameter sets a frequency threshold that activates the assigned output terminal for the duration that the ASD output is equal to or above this setting (see Table 8 on pg. 239 for the available output assignments).

Direct Access Number —   **F100**

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — **Max. Freq.** (F011)

Units — Hz

Speed Reach Frequency

Program ⇒ Terminal ⇒ Reach Settings

The **Speed Reach Frequency** sets a frequency threshold that, when reached or is within the bandwidth specified by parameter F102, activates the assigned output terminal for the duration that the ASD output is within the bandwidth specified (see Table 8 on pg. 239 for the available output assignments).

Direct Access Number —   **F101**

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — **Max. Freq.** (F011)

Units — Hz

Speed Reach Detection Band

Program ⇒ Terminal ⇒ Reach Settings

This parameter sets the bandwidth of the **Speed Reach Frequency** (F101) setting.

Direct Access Number —   **F102**

Parameter Type — **Numerical**

Factory Default — **2.50**

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — **Max. Freq.** (F011)

Units — Hz

Forward/Reverse Run Priority Selection

Program ⇒ Terminal ⇒ Input Special Functions

The **Forward/Reverse Priority Selection** determines the operation of the ASD if the **F** and **R** control terminals are activated simultaneously.

Settings:

> 0 — Reverse
> 1 — Suspend

The waveforms shown depict the motor response for all combinations of the **F** and **R** terminal settings if the **Reverse** option is chosen.

The **Suspend** setting will decelerate the motor to a stop regardless of the rotation direction when both the **F** and **R** control terminals are activated.

Direct Access Number —   **F105**

Parameter Type — **Selection List**

Factory Default — **Suspend**

Changeable During Run — **No**

Simultaneous F and R activation.
Input Terminal Priority

Program ⇒ Terminal ⇒ Input Special Functions

This parameter is used to allow the **Jog** and **DC Injection Braking** input signals to control the ASD when received via the **Terminal Board** even though the system is in the **Local** mode.

With this parameter enabled**,** a **Jog** command or a **DC Injection Braking** command received from the **Terminal Board** will receive priority over commands from the **EOI**.

See F260 for more information on using the **Jog** function.

See F250 – F252 for more information on **DC Injection Braking**.

Settings:

    0 — Disabled
    1 — Enabled

Direct Access Number —   F106
Parameter Type — **Selection List**
Factory Default — **Disabled**
Changeable During Run — **No**

16-Bit Binary/BCD Input

Program ⇒ Terminal ⇒ Input Special Functions

The extended terminal function is used with the **Expansion IO Card Option** (P/N ETB004Z).

This parameter defines the format of the binary or BCD data when using the option card.

Note: *The* **Expansion IO Card Option 2** *option board is required to use this terminal.*

See the **Expansion IO Card Option 1** instruction manual (P/N 58685) for more information on the function of this terminal.

Settings:

    0 — None
    1 — 12-Bit Binary
    2 — 16-Bit Binary
    3 — 3-Digit BCD
    4 — 4-Digit BCD
    5 — Inverted 12-Bit Binary
    6 — Inverted 16-Bit Binary
    7 — Inverted 3-Digit BCD
    8 — Inverted 4-Digit BCD

Selections using 16-bit binary or 4-digit BCD will require the configuration of terminals S1-S4 on the **Terminal Board** as binary bits 0 – 3 (F115 – F118). The **Frequency Mode 1** (F004) parameter must be set to **Binary/BCD**.

For proper scaling of the binary or BCD input, parameters F228 – F231 must be configured.

Direct Access Number —   F107
Parameter Type — **Selection List**
Factory Default — **None**
Changeable During Run — **No**

Option V/I Terminal Voltage/Current Selection

Program ⇒ Frequency ⇒ V/I Settings

This parameter is used to set the **AI2** input terminal to receive either current or voltage as a control signal.

Note: *The* **Expansion IO Card Option 2** *option board (P/N ETB004Z) is required to use this terminal.*

See the **Expansion IO Card Option 2** instruction manual (P/N 58686) for more information on the function of this terminal.

Settings:

   0 — Voltage Input
   1 — Current Input

Direct Access Number —   F109

Parameter Type — **Selection List**

Factory Default — **Voltage Input**

Changeable During Run — **No**

Always ON Terminal 1

Program ⇒ Terminal ⇒ Input Terminals ⇒ ON

This parameter is used to set the functionality of the virtual discrete input terminal **ON**. As a virtual terminal, the **ON** control terminal exists only in memory and is considered to always be in its **True** (connected to CC) state.

It is often practical to assign a function to this terminal that the user desires to be maintained regardless of external conditions or operations.

This parameter sets the programmable **ON** terminal to one of the user-selectable functions listed in Table 5 on pg. 234.

Direct Access Number —   F110

Parameter Type — **Selection List**

Factory Default — **Unassigned**

Changeable During Run — **No**

Input Terminal 1 (F) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **F** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This parameter sets the programmable **F** terminal to one of the user-selectable functions listed in Table 5 on pg. 234.
Direct Access Number —   F111

Parameter Type — **Selection List**

Factory Default—**Forward**

Changeable During Run — **No**

Input Terminal 2 (R) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **R** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This parameter sets the programmable **R** terminal to one of the user-selectable functions listed in Table 5 on pg. 234.

Direct Access Number —   F112

Parameter Type — **Selection List**

Factory Default — **Reverse**   Reverse

Changeable During Run — **No**

Input Terminal 3 (ST) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **ST** (Standby) discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This parameter sets the programmable **ST** terminal to one of the user-selectable functions listed in Table 5 on pg. 234.

Direct Access Number —   F113

Parameter Type — **Selection List**

Factory Default — **Standby**

Changeable During Run — **No**

Input Terminal 4 (RES) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **RES** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This parameter sets the programmable **RES** terminal to one of the user-selectable functions listed in Table 5 on pg. 234.

Direct Access Number —   **F114**

Parameter Type — **Selection List**

Factory Default — **Reset**

Changeable During Run — **No**

Input Terminal 5 (S1) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **S1** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This parameter sets the programmable **S1** terminal to one of the user-selectable functions listed in Table 5 on pg. 234.

Direct Access Number —   **F115**

Parameter Type — **Selection List**

Factory Default — **Preset Speed 1**

Changeable During Run — **No**

Input Terminal 6 (S2) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **S2** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This parameter sets the programmable **S2** terminal to one of the user-selectable functions listed in Table 5 on pg. 234.

Direct Access Number —   **F116**

Parameter Type — **Selection List**

Factory Default — **Preset Speed 2**

Changeable During Run — **No**

Input Terminal 7 (S3) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **S3** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This parameter sets the programmable **S3** terminal to one of the user-selectable functions listed in Table 5 on pg. 234.

Direct Access Number —   **F117**

Parameter Type — **Selection List**

Factory Default — **Preset Speed 3**

Changeable During Run — **No**

Input Terminal 8 (S4) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **S4** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This parameter sets the programmable **S4** terminal to one of the user-selectable functions listed in Table 5 on pg. 234.

Direct Access Number —   **F118**

Parameter Type — **Selection List**

Factory Default — **Preset Speed 4**

Changeable During Run — **No**

Input Terminal 9 (LI1) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **LI1** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the function of the programmable **LI1** terminal to one of the user-selectable functions listed in Table 5 on pg. 234.

Note: *The **Expansion IO Card Option 1** option board (P/N ETB003Z) is required to use this terminal.*

See the **Expansion IO Card Option 1** instruction manual (P/N 58685) for more information on the function of this terminal.

Direct Access Number — F119

Parameter Type — **Selection List**

Factory Default — **Unassigned**

Changeable During Run — **No**

Input Terminal 10 (LI2) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **LI2** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the function of the programmable **LI2** terminal to one of the user-selectable functions listed in Table 5 on pg. 234.

Note: *The **Expansion IO Card Option 1** option board (P/N ETB003Z) is required to use this terminal.*

See the **Expansion IO Card Option 1** instruction manual (P/N 58685) for more information on the function of this terminal.

Direct Access Number — F120

Parameter Type — **Selection List**

Factory Default — **Unassigned**

Changeable During Run — **No**

Input Terminal 11 (LI3) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **LI3** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the function of the programmable **LI3** terminal to one of the user-selectable functions listed in Table 5 on pg. 234.

Note: *The **Expansion IO Card Option 1** option board (P/N ETB003Z) is required to use this terminal.*

See the **Expansion IO Card Option 1 instruction manual** (P/N 58685) for more information on the function of this terminal.

Direct Access Number — F121

Parameter Type — **Selection List**

Factory Default — **Unassigned**

Changeable During Run — **No**

Input Terminal 12 (LI4) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **LI4** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the function of the programmable **LI4** terminal to one of the user-selectable functions listed in Table 5 on pg. 234.

Note: *The **Expansion IO Card Option 1** option board (P/N ETB003Z) is required to use this terminal.*

See the **Expansion IO Card Option 1** instruction manual (P/N 58685) for more information on the function of this terminal.

Direct Access Number —   F122

Parameter Type — **Selection List**

Factory Default — **Unassigned**

Changeable During Run — **No**

Input Terminal 13 (LI5) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **LI5** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the function of the programmable **LI5** terminal to one of the user-selectable functions listed in Table 5 on pg. 234.

Note: *The **Expansion IO Card Option 2** option board (P/N ETB004Z) is required to use this terminal.*

See the **Expansion IO Card Option 2** instruction manual (P/N 58686) for more information on the function of this terminal.

Direct Access Number —   F123

Parameter Type — **Selection List**

Factory Default — **Unassigned**

Changeable During Run — **No**

Input Terminal 14 (LI6) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **LI6** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the function of the programmable **LI6** terminal to one of the user-selectable functions listed in Table 5 on pg. 234

Note: *The **Expansion IO Card Option 2** option board (P/N ETB004Z) is required to use this terminal.*

See the **Expansion IO Card Option 2** instruction manual (P/N 58686) for more information on the function of this terminal.

Direct Access Number —   F124

Parameter Type — **Selection List**

Factory Default — **Unassigned**

Changeable During Run — **No**

Input Terminal 15 (LI7) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **LI7** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the function of the programmable **LI7** terminal to one of the user-selectable functions listed in Table 5 on pg. 234.

Note: *The **Expansion IO Card Option 2** option board (P/N ETB004Z) is required to use this terminal.*

See the **Expansion IO Card Option 2** instruction manual (P/N 58686) for more information on the function of this terminal.

Direct Access Number —   F125

Parameter Type — Selection List

Factory Default — Unassigned

Changeable During Run — No

Input Terminal 16 (LI8) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **LI8** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the function of the programmable **LI8** terminal to one of the user-selectable functions listed in Table 5 on pg. 234.

Note: *The **Expansion IO Card Option 2** option board (P/N ETB004Z) is required to use this terminal.*

See the **Expansion IO Card Option 2** instruction manual (P/N 58686) for more information on the function of this terminal.

Direct Access Number —   F126

Parameter Type — Selection List

Factory Default — Unassigned

Changeable During Run — No

Output Terminal 1 (OUT1) Function

Program ⇒ Terminal ⇒ Output Terminals

This parameter is used to set the functionality of the **OUT1** discrete output terminals **O1A** and **O1B**.

The **O1A** and **O1B** (OUT1) output terminals change states (open or close) as a function of a user-selected event. See Table 8 on pg. 239 for listing the possible assignments for the **OUT1** terminals.

In addition, the output terminals must be specified as **Normally Open** or **Normally Closed**.

Direct Access Number —   F130

Parameter Type — Selection List

Factory Default — Low-Speed Signal

Changeable During Run — No

Output Terminal 2 (OUT2) Function

Program ⇒ Terminal ⇒ Output Terminals

This parameter is used to set the functionality of the **OUT2** discrete output terminals **O2A** and **O2B**.

The **O2A** and **O2B** (OUT2) output terminals change states (open or close) as a function of a user-selected event. See Table 8 on pg. 239 for listing the possible assignments for the **OUT2** terminals.

In addition, the output terminals must be specified as **Normally Open** or **Normally Closed**.

Direct Access Number —   F131

Parameter Type — Selection List

Factory Default — RCH (Acc/Dec Complete)

Changeable During Run — No

Output Terminal 3 (FL) Function

Program ⇒ Terminal ⇒ Output Terminals

This parameter is used to set the functionality of the **FL** output terminals to one of the user-selectable functions listed in Table 8 on pg. 239.

In addition, the output terminals must be specified as **Normally Open** or **Normally Closed**.

Direct Access Number — F132

Parameter Type — **Selection List**

Factory Default — **Fault (All)**

Changeable During Run — **No**

Not Faulted

Output Terminal 4 (OUT3) Function

Program ⇒ Terminal ⇒ Output Terminals

This parameter is used to set the functionality of the **OUT3** discrete output terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the function of the programmable **OUT3** terminal to one of the user-selectable functions listed in Table 8 on pg. 239.

Note: *The **Expansion IO Card Option 1** option board (P/N ETB003Z) is required to use this terminal.*

See the **Expansion IO Card Option 1** instruction manual (P/N 58685) for more information on the function of this terminal.

Direct Access Number — F133

Parameter Type — **Selection List**

Factory Default — **Always OFF**

Changeable During Run — **No**

Output Terminal 5 (OUT4) Function

Program ⇒ Terminal ⇒ Output Terminals

This parameter is used to set the functionality of the **OUT4** discrete output terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the function of the programmable **OUT4** terminal to one of the user-selectable functions listed in Table 8 on pg. 239.

Note: *The **Expansion IO Card Option 1** option board (P/N ETB003Z) is required to use this terminal.*

See the **Expansion IO Card Option 1** instruction manual (P/N 58685) for more information on the function of this terminal.

Direct Access Number — F134

Parameter Type — **Selection List**

Factory Default — **Always OFF**

Changeable During Run — **No**

Output Terminal 6 (R1) Function

Program ⇒ Terminal ⇒ Output Terminals

This parameter is used to set the functionality of the **R1** discrete output terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the function of the programmable **R1** terminal to one of the user-selectable functions listed in Table 8 on pg. 239.

Note: *The **Expansion IO Card Option 1** option board (P/N ETB003Z) is required to use this terminal.*

See the **Expansion IO Card Option 1** instruction manual (P/N 58685) for more information on the function of this terminal.

Direct Access Number —   **F135**
Parameter Type — **Selection List**
Factory Default — **Always OFF**
Changeable During Run — **No**

Output Terminal 7 (OUT5) Function

Program ⇒ Terminal ⇒ Output Terminals

This parameter is used to set the functionality of the **OUT5** discrete output terminal.

In addition, this output terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the function of the programmable **OUT5** terminal to one of the user-selectable functions listed in Table 8 on pg. 239.

Note: *The **Expansion IO Card Option 2** option board (P/N ETB004Z) is required to use this terminal.*

See the **Expansion IO Card Option 2** instruction manual (P/N 58686) for more information on the function of this terminal.

Direct Access Number —   **F136**
Parameter Type — **Selection List**
Factory Default — **Always Off**
Changeable During Run — **No**

Output Terminal 8 (OUT6) Function

Program ⇒ Terminal ⇒ Output Terminals

This parameter is used to set the functionality of the **OUT6** discrete output terminal.

In addition, this output terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the function of the programmable **OUT6** terminal to one of the user-selectable functions listed in Table 8 on pg. 239.

Note: *The **Expansion IO Card Option 2** option board (P/N ETB004Z) is required to use this terminal.*

See the **Expansion IO Card Option 2** instruction manual (P/N 58686) for more information on the function of this terminal.

Direct Access Number —   **F137**
Parameter Type — **Selection List**
Factory Default — **Always Off**
Changeable During Run — **No**

Output Terminal 9 (R2) Function

Program ⇒ Terminal ⇒ Output Terminals

This parameter is used to set the functionality of the **R2** discrete output terminal.

In addition, this output terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the function of the programmable **R2** terminal to one of the user-selectable functions listed in Table 8 on pg. 239.

Note: *The **Expansion IO Card Option 2** option board (P/N ETB004Z) is required to use this terminal.*

See the **Expansion IO Card Option 2** instruction manual (P/N 58686) for more information on the function of this terminal.

Direct Access Number — F138

Parameter Type — **Selection List**

Factory Default — **Always Off**

Changeable During Run — **No**

Input Terminal 1 (F) Response Time

Program ⇒ Terminal ⇒ Input Terminal Delays

This parameter delays the response of the ASD to any change in the **F** terminal input by the programmed value.
The delay may be increased to provide additional electrical noise immunity or to prevent the ASD from responding to contact bounce or chatter.

Direct Access Number — F140

Parameter Type — **Numerical**

Factory Default — **8.0**

Changeable During Run — **No**

Minimum — 2.0

Maximum — 200.0

Units — mS

Input Terminal 2 (R) Response Time

Program ⇒ Terminal ⇒ Input Terminal Delays

This parameter delays the response of the drive to any change in the **R** terminal input by the programmed value (see waveforms at F140).

The delay may be increased to provide additional electrical noise immunity or to prevent the ASD from responding to contact bounce or chatter.

Direct Access Number — F141

Parameter Type — **Numerical**

Factory Default — **8.0**

Changeable During Run — **No**

Minimum — 2.0

Maximum — 200.0

Units — mS

Input Terminal 3 (ST) Response Time

Program ⇒ Terminal ⇒ Input Terminal Delays

This parameter delays the response of the drive to any change in the **ST** terminal input by the programmed value (see waveforms at F140).

The delay may be increased to provide additional electrical noise immunity or to prevent the ASD from responding to contact bounce or chatter.

Direct Access Number — F142

Parameter Type — **Numerical**

Factory Default — **8.0**

Changeable During Run — **No**

Minimum — 2.0

Maximum — 200.0

Units — mS

Input Terminal 4 (RES) Response Time

Program ⇒ Terminal ⇒ Input Terminal Delays

This parameter delays the response of the drive to any change in the **RES** terminal input by the programmed value (see waveforms at F140).

The delay may be increased to provide additional electrical noise immunity or to prevent the ASD from responding to contact bounce or chatter.

Direct Access Number —   F143

Parameter Type — **Numerical**

Factory Default — **8.0**

Changeable During Run — **No**

Minimum — 2.0

Maximum — 200.0

Units — mS

Input Terminal 5 – 12 Response Time

Program ⇒ Terminal ⇒ Input Terminal Delays

This parameter delays the response of the drive to any change in the **5 – 12** terminal inputs by the programmed value (see waveforms at F140).

The delay may be increased to provide additional electrical noise immunity or to prevent the ASD from responding to contact bounce or chatter.

Direct Access Number —   F144

Parameter Type — **Numerical**

Factory Default — **8.0**

Changeable During Run — **No**

Minimum — 2.0

Maximum — 200.0

Units — mS

Input Terminal 13 – 20 Response Time

Program ⇒ Terminal ⇒ Input Terminal Delays

This parameter delays the response of the drive to any change in the **13 – 20** terminal inputs by the programmed value (see waveforms at F140).

The delay may be increased to provide additional electrical noise immunity or to prevent the ASD from responding to contact bounce or chatter.

Direct Access Number —   F145

Parameter Type — **Numerical**

Factory Default — **8.0**

Changeable During Run — **No**

Minimum — 2.0

Maximum — 200.0

Units — mS

Input Terminal 17 (B12) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **B12** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the functionality of the programmable **B12** terminal to any one of the user-selectable functions listed in Table 5 on pg. 234.

See the **My Function Instruction Manual** (P/N E6581335) for more information on the function of this terminal.

Direct Access Number —   F164

Parameter Type — **Selection List**

Factory Default — **Unassigned**

Changeable During Run — **No**

Input Terminal 18 (B13) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **B13** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the function of the programmable **B13** terminal to any one of the user-selectable functions listed in Table 5 on pg. 234.

See the **My Function Instruction Manual** (P/N E6581335) for more information on the function of this terminal.

Direct Access Number —   F165

Parameter Type — **Selection List**

Factory Default — **Unassigned**

Changeable During Run — **No**

Input Terminal 19 (B14) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **B14** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the function of the programmable **B14** terminal to any one of the user-selectable functions listed in Table 5 on pg. 234.

See the **My Function Instruction Manual** (P/N E6581335) for more information on the function of this terminal.

Direct Access Number — F166

Parameter Type — **Selection List**

Factory Default — **Unassigned**

Changeable During Run — **No**

Input Terminal 20 (B15) Function

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **B15** discrete input terminal.

In addition, this input terminal must be specified as **Normally Open** or **Normally Closed**.

This setting assigns the function of the programmable **B15** terminal to any one of the user-selectable functions listed in Table 5 on pg. 234.

See the **My Function Instruction Manual** (P/N E6581335) for more information on the function of this terminal.

Direct Access Number — F167

Parameter Type — **Selection List**

Factory Default — **Unassigned**

Changeable During Run — **No**

Output Terminal 10 (R3) Function

Program ⇒ Terminal ⇒ Output Terminals

This parameter sets the functionality of the **R3** output terminal to any one of the user-selectable functions listed in Table 8 on pg. 239.

In addition, the output terminals must be specified as **Normally Open** or **Normally Closed**.

See the instruction manual for the **16-Bit BIN/BCD** option for more information on the function of this terminal.

Direct Access Number — F168

Parameter Type — **Selection List**

Factory Default — **OFF**

Changeable During Run — **No**

Output Terminal 11 (R4) Function

Program ⇒ Terminal ⇒ Output Terminals

This parameter sets the functionality of the **R4** output terminal to any one of the user-selectable functions listed in Table 8 on pg. 239.

In addition, the output terminals must be specified as **Normally Open** or **Normally Closed**.

See the instruction manual for the **16-Bit BIN/BCD** option for more information on the function of this terminal.

Direct Access Number — F169

Parameter Type — **Selection List**

Factory Default — **OFF**

Changeable During Run — **No**

Base Frequency 2

Program ⇒ Motor ⇒ Motor Set 2

The **Base Frequency 2** setting is the frequency at which the output voltage of the ASD reaches its maximum setting. The **Base Frequency Voltage 2** parameter is set at F171.

This parameter is used only when the parameters for **Motor Set 2** are configured and selected. **Motor Set 2** may be selected by a properly configured input terminal (see Table 5 on pg. 234).

For proper motor operation, the **Base Frequency** should be set for the nameplated frequency of the motor.

Direct Access Number — F170

Parameter Type — **Numerical**

Factory Default — **60.0**

Changeable During Run — **Yes**

Minimum — 25.0

Maximum — 299.0

Units — Hz

Base Frequency Voltage 2

Program ⇒ Motor ⇒ Motor Set 2

The **Base Frequency Voltage 2** setting is the **Motor 2** output voltage at the **Base Frequency** (F170). Regardless of the programmed value, the output voltage cannot be higher than the input voltage.

The actual output voltage will be influenced by the input voltage of the ASD and the **Supply Voltage Compensation** setting (F307).

This parameter is used only when the parameters for **Motor Set 2** are configured and selected. **Motor Set 2** may be selected by a properly configured input terminal (see Table 5 on pg. 234).

Direct Access Number — F171

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

Changeable During Run — **Yes**

Minimum — 50.0

Maximum — 660.0

Units — Volts

Manual Torque Boost 2

Program ⇒ Motor ⇒ Motor Set 2

The **Manual Torque Boost 2** function is used to increase the low frequency torque for high inertia loads by increasing the output voltage at frequencies below ½ of the **Base Frequency 2** setting (F170).

See parameter F016 (Manual Torque Boost 1) for an explanation of torque boost.

This parameter is used only when the parameters for **Motor Set 2** are configured and selected. **Motor Set 2** may be selected by a properly configured input terminal (see Table 5 on pg. 234).

Direct Access Number — F172

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

Changeable During Run — **Yes**

Minimum — 0.0

Maximum — 30.0

Units — %

Motor Overload Protection Level 2

Program ⇒ Motor ⇒ Motor Set 2

The **Motor 2 Overload Protection Level** parameter specifies the motor overload current level for **Motor Set** 2. This value is entered as either a percentage of the full load rating of the ASD or as the FLA of the motor.

The unit of measurement for this parameter may be set to **Amps** (A/V) or it may be set as a percentage of the ASD rating. The nameplated FLA of the motor may be entered directly when **Amps** is selected as the unit of measurement (see F701 to change the display unit).

The **Motor 2 Overload Protection Level** setting will be displayed in **Amps** if the **EOI** display units are set to **A/V** rather than **%**.

Direct Access Number — F173

Parameter Type — **Numerical**

Factory Default — **100**

Changeable During Run — **Yes**

Minimum — 10

Maximum — 100

Units — %

Base Frequency 3

Program ⇒ Motor ⇒ Motor Set 3

The **Base Frequency 3** setting is the frequency at which the output voltage of the ASD reaches its maximum setting. The **Base Frequency Voltage 3** parameter is set at F175.

This parameter is used only when the parameters for **Motor Set 3** are configured and selected. **Motor Set 3** may be selected by a properly configured input terminal (see Table 5 on pg. 234).

For proper motor operation, the **Base Frequency** should be set for the nameplated frequency of the motor.

Direct Access Number — F174

Parameter Type — **Numerical**

Factory Default — **60.0**

Changeable During Run — **Yes**

Minimum — 25.0

Maximum — 299.0

Units — Hz

Base Frequency Voltage 3

Program ⇒ Motor ⇒ Motor Set 3

The **Base Frequency Voltage 3** setting is the **Motor 3** output voltage at the **Base Frequency** (F174). Regardless of the programmed value, the output voltage cannot be higher than the input voltage.

The actual output voltage will be influenced by the input voltage of the ASD and the **Supply Voltage Compensation** setting (F307).

This parameter is used only when the parameters for **Motor Set 3** are configured and selected. **Motor Set 3** may be selected by a properly configured input terminal (see Table 5 on pg. 234).

Direct Access Number — F175

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

Changeable During Run — **Yes**

Minimum — 50.0

Maximum — 660.0

Units — Volts

Manual Torque Boost 3

Program ⇒ Motor ⇒ Motor Set 3

The **Manual Torque Boost 3** function is used to increase the low frequency torque for high inertia loads by increasing the output voltage at frequencies below ½ of the **Base Frequency 3** setting (F174).

See parameter F016 (Manual Torque Boost 1) for an explanation of torque boost.

This parameter is used only when the parameters for **Motor Set 3** are configured and selected. **Motor Set** 3 may be selected by a properly configured input terminal (see Table 5 on pg. 234).

Direct Access Number — F176

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

Changeable During Run — **Yes**

Minimum — 0.0

Maximum — 30.0

Units — %

Motor Overload Protection Level 3

Program ⇒ Motor ⇒ Motor Set 3

The **Motor 3 Overload Protection Level** parameter specifies the motor overload current level for **Motor Set** 3. This value is entered as either a percentage of the full load rating of the ASD or as the FLA of the motor.

The unit of measurement for this parameter may be set to **Amps** (A/V) or it may be set as a percentage of the ASD rating. The nameplated FLA of the motor may be entered directly when **Amps** is selected as the unit of measurement (see F701 to change the display unit).

The **Motor 3 Overload Protection Level** setting will be displayed in **Amps** if the **EOI** display units are set to **A/V** rather than **%**.

Direct Access Number — F177

Parameter Type — **Numerical**

Factory Default — **100.0**

Changeable During Run — **Yes**

Minimum — 10

Maximum — 100

Units — %

Base Frequency 4

Program ⇒ Motor ⇒ Motor Set 4

The **Base Frequency 4** setting is the frequency at which the output voltage of the ASD reaches its maximum setting. The **Base Frequency Voltage 4** parameter is set at F179.

This parameter is used only when the parameters for **Motor Set 4** are configured and selected. **Motor Set 4** may be selected by a properly configured input terminal (see Table 5 on pg. 234).

For proper motor operation, the **Base Frequency** should be set for the nameplated frequency of the motor.

Direct Access Number — **F178**

Parameter Type — **Numerical**

Factory Default — **60.0**

Changeable During Run — **Yes**

Minimum — 25.00

Maximum — 299.0

Units — Hz

Base Frequency Voltage 4

Program ⇒ Motor ⇒ Motor Set 4

The **Base Frequency Voltage 4** is the **Motor 4** output voltage at the **Base Frequency** (F178). Regardless of the programmed value, the output voltage cannot be higher than the input voltage.

The actual output voltage will be influenced by the input voltage of the ASD and the **Supply Voltage Compensation** setting (F307).

This parameter is used only when the parameters for **Motor Set 4** are configured and selected. **Motor Set 4** may be selected by a properly configured input terminal (see Table 5 on pg. 234).

Direct Access Number — **F179**

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

Changeable During Run — **Yes**

Minimum — 50.0

Maximum — 660.0

Units — Volts

Manual Torque Boost 4

Program ⇒ Motor ⇒ Motor Set 4

The **Manual Torque Boost 4** function is used to increase the low frequency torque for high inertia loads by increasing the output voltage at frequencies below ½ of the **4 Base Frequency** setting (F178).

See parameter F016 (Manual Torque Boost 1) for an explanation of torque boost.

This parameter is used only when the parameters for **Motor Set 4** are configured and selected. **Motor Set** 4 may be selected by a properly configured input terminal (see Table 5 on pg. 234).

Direct Access Number — **F180**

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

Changeable During Run — **Yes**

Minimum — 0.0

Maximum — 30.0

Units — %

Motor Overload Protection Level 4

Program ⇒ Motor ⇒ Motor Set 4

The **Motor 4 Overload Protection Level** parameter specifies the motor overload current level for **Motor Set** 4. This value is entered as either a percentage of the full load rating of the ASD or as the FLA of the motor.

The unit of measurement for this parameter may be set to **Amps** (A/V) or it may be set as a percentage of the ASD rating. The nameplated FLA of the motor may be entered directly when **Amps** is selected as the unit of measurement (see F701 to change the display unit).

The **Motor 4 Overload Protection Level** setting will be displayed in **Amps** if the **EOI** display units are set to **A/V** rather than **%**.

Direct Access Number — **F181**

Parameter Type — **Numerical**

Factory Default — **100.0**

Changeable During Run — **Yes**

Minimum — 10

Maximum — 100

Units — %

V/f 5-Point Setting Frequency 1

Program ⇒ Special ⇒ V/f 5-Point Setting

The **V/f 5-Point Setting Frequency 1** setting establishes the frequency that is to be associated with the voltage setting of F191 (V/f 5-Point Setting Voltage 1).

The V/f 5-Point settings define a volts per hertz relationship for the startup output of the ASD.

To enable this function, set the **V/f Pattern** (F015) selection to the **V/f 5-Point Curve** setting.

V/f Curves may be useful in starting high inertia loads such as rotary drum vacuum filters.

Direct Access Number —   **F190**

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **No**

Minimum — 0.00

Maximum — **Max. Freq.** (F011)

Units — Hz
V/f 5-Point Setting Voltage 1

Program ⇒ Special ⇒ V/f 5-Point Setting

The **V/f 5-Point Setting Voltage 1** establishes the output voltage level that is to be associated with the frequency setting of F190 (V/f 5-Point Setting Frequency 1).

The F701 parameter setting will determine if the on-screen selection for this parameter appears in the form of a Voltage (V) or as a Percentage (%) of the ASD rating.

If using **Voltage** as a unit of measure and with no voltage correction (F307 Disabled), the limit of the on-screen display value for this parameter is 200 volts for the 230-volt ASD and 400 volts for the 460-volt ASD.

The actual output voltage is scaled to the maximum EOI display values (e.g., a 100-volt EOI display corresponds to a 115-volt actual output for the 230-volt ASD — ½ of the full display range).

If using **%** as a unit of measure and with no voltage correction (F307 Disabled), the ASD output voltage will be the percentage setting times 230 for the 230-volt unit (or % times 460 volts for the 460-volt unit).

See F190 for additional information on this setting.
Direct Access Number — F191

Parameter Type — **Numerical**

Factory Default — **0.0**

Changeable During Run — **No**

Minimum — 0.0

Maximum — 100.0

Units — V or % (F701)

V/f 5-Point Setting Frequency 2

Program ⇒ Special ⇒ V/f 5-Point Setting

The **V/f 5-Point Setting Frequency 2** sets the frequency to be associated with the voltage setting of parameter F193 (V/f 5-Point Setting Voltage 2).

See F190 and F191 for additional information on this setting.

Direct Access Number — F192

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **No**

Minimum — 0.00

Maximum — **Max. Freq. (F011)**

Units — Hz

V/f 5-Point Setting Voltage 2	**Direct Access Number — F193**
Program ⇒ Special ⇒ V/f 5-Point Setting	Parameter Type — **Numerical**
	Factory Default — **0.0**
The **V/f 5-Point Setting Voltage 2** establishes the output voltage level that is to be associated with the frequency setting of F192 (V/f 5-Point Setting Frequency 2).	Changeable During Run — **No**
	Minimum — 0.0
The F701 parameter setting will determine if the selection for this parameter appears in the form of a Voltage (V) or as a Percentage (%) of the ASD rating.	Maximum — 100.0
	Units — V or % (F701)
The default setting is **%**.	
See F190 and F191 for additional information on this setting.	

V/f 5-Point Setting Frequency 3	**Direct Access Number — F194**
Program ⇒ Special ⇒ V/f 5-Point Setting	Parameter Type — **Numerical**
	Factory Default — **0.00**
The **V/f 5-Point Setting Frequency 3** sets the frequency to be associated with the voltage setting of parameter F195 (V/f 5-Point Setting Voltage 3).	Changeable During Run — **No**
	Minimum — 0.00
See F190 and F191 for additional information on this setting.	Maximum — **Max. Freq.** (F011)
	Units — Hz

V/f 5-Point Setting Voltage 3	**Direct Access Number — F195**
Program ⇒ Special ⇒ V/f 5-Point Setting	Parameter Type — **Numerical**
	Factory Default — **0.0**
The **V/f 5-Point Setting Voltage 3** establishes the output voltage level that is to be associated with the frequency setting of F194 (V/f 5-Point Setting Frequency 3).	Changeable During Run — **No**
	Minimum — 0.0
The F701 parameter setting will determine if the selection for this parameter appears in the form of a Voltage (V) or as a Percentage (%) of the ASD rating.	Maximum — 100.0
	Units — V or % (F701)
The default setting is %.	
See F190 and F191 for additional information on this setting.	

V/f 5-Point Setting Frequency 4	**Direct Access Number — F196**
Program ⇒ Special ⇒ V/f 5-Point Setting	Parameter Type — **Numerical**
	Factory Default — **0.00**
The **V/f 5-Point Setting Frequency 4** sets the frequency to be associated with the voltage setting of parameter F197 (V/f 5-Point Setting Voltage 4).	Changeable During Run — **No**
	Minimum — 0.00
See F190 and F191 for additional information on this setting.	Maximum — **Max. Freq.** (F011)
	Units — Hz

V/f 5-Point Setting Voltage 4	**Direct Access Number — F197**
Program ⇒ Special ⇒ V/f 5-Point Setting	Parameter Type — **Numerical**
	Factory Default — **0.0**
The **V/f 5-Point Setting Voltage 4** establishes the output voltage level that is to be associated with the frequency setting of F196 (V/f 5-Point Setting Frequency 4).	Changeable During Run — **No**
	Minimum — 0.0
The F701 parameter setting will determine if the selection for this parameter appears in the form of a Voltage (V) or as a Percentage (%) of the ASD rating.	Maximum — 100.0
	Units — V or % (F701)
The default setting is **%**.	
See F190 and F191 for additional information on this setting.	

V/f 5-Point Setting Frequency 5

Program ⇒ Special ⇒ V/f 5-Point Setting

The **V/f 5-Point Setting Frequency 5** sets the frequency to be associated with the voltage setting of parameter F199 (V/f 5-Point Setting Voltage 5).

See F190 and F191 for additional information on this setting.

Direct Access Number —   **F198**

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **No**

Minimum — 0.00

Maximum — **Max. Freq. (**F011**)**

Units — Hz

V/f 5-Point Setting Voltage 5

Program ⇒ Special ⇒ V/f 5-Point Setting

The **V/f 5-Point Setting Voltage 5** establishes the output voltage level that is to be associated with the frequency setting of F198 (V/f 5-Point Setting Frequency 5).

The F701 parameter setting will determine if the selection for this parameter appears in the form of a Voltage (V) or as a Percentage (%) of the ASD rating.

The default setting is %.

See F190 and F191 for additional information on this setting.

Direct Access Number —   **F199**

Parameter Type — **Numerical**

Factory Default — **0.0**

Changeable During Run — **No**

Minimum — 0.0

Maximum — 100.0

Units — V or % (F701)

Frequency Priority Selection

Program ⇒ Fundamental ⇒ Standard Mode Selection

Either **Frequency Mode 1** or **Frequency Mode 2** may control the output frequency of the ASD. This parameter determines which of the two will control the output frequency and the conditions in which control will be switched from one to the other.

Note: *Frequency Mode is abbreviated as* **FMOD**.

Settings:

     0 — FMOD changed by Terminal Board (Frequency Mode)
     1 — FMOD (F208) (Frequency Mode)

The **Frequency Mode 1** or **Frequency Mode 2** selection specifies the source of the input frequency command signal. These selections are performed at F004 and F207, respectively.

If **FMOD changed by Terminal Board** is selected here, the ASD will follow the control of the discrete input terminal assigned the function of **Frequency Priority**. The discrete terminal **Frequency Priority** will toggle control to and from **Frequency Mode 1** and **Frequency Mode 2** with each activation/ deactivation.

If **FMOD** (F208) is selected here, the ASD will follow the control of the **Frequency Mode 1** setting for the duration that the commanded frequency of the **Frequency Mode 1** setting is greater than the setting of F208.

If the commanded frequency of the **Frequency Mode 1** setting is less than or equal to the setting of F208 the ASD will follow the setting of **Frequency Mode 2**.

Direct Access Number —   **F200**

Parameter Type — **Selection List**

Factory Default — **FMOD (changed by TB)**

Changeable During Run — **Yes**
If the frequency command of Frequency Mode 1 is greater than the F208 setting, Frequency Mode 1 has priority over Frequency Mode 2.
If the frequency command of Frequency Mode 1 is equal to or less than the F208 setting, Frequency Mode 2 has priority.

V/I Input Point 1 Setting

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to set the gain and bias of the isolated **V/I** input terminal when the **V/I** terminal is used as the control input while operating in the **Speed Control** mode or the **Torque Control** mode.

This parameter sets the **V/I** input level that is associated with the **V/I Input Point 1 Frequency** setting when operating in the **Speed** control mode or is associated with the **V/I Input Point 1 Rate** setting when operating in the **Torque Control** mode.

V/I Input Speed Control Setup

Perform the following setup to allow the system to receive **Speed** control input at the **V/I** input terminal:

- Set **SW301** of the **Terminal Board** to **Voltage** or **Current** (see Figure 9 on pg. 24).
- Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ Frequency Mode 1 ⇒ **V/I**.
- Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ Command Mode Selection ⇒ **Terminal Block**.

Speed Control

Perform the following setup to allow the system to perform **Speed** control from the **V/I** input terminal:

- Set **V/I Input Point 1 Frequency** (F202).
- Set **V/I Input Point 1 Setting** (F201) — the input analog signal level that corresponds to the frequency setting at **V/I Input Point 1 Frequency**.
- Set **V/I Input Point 2 Frequency** (F204).
- Set **V/I Input Point 2 Setting** (F203) — the input analog signal level that corresponds to the frequency setting at **V/I Input Point 2 Frequency**.
- Provide a **Run** command (F and/or R).

Once set, as the **V/I** input voltage or current changes, the output frequency of the ASD will vary in accordance with the above settings.

This parameter value is entered as 0% to 100% of the **V/I** input signal range.

The **V/I** input is commonly used for a 4 – 20 mA current loop signal where 4 mA equals 20% of a 20 mA signal. Set this parameter to 20% for 4 – 20 mA current loop signal applications.

Note: *When using the isolated **V/I** input terminal the **IICC** terminal must be used as the return (negative) connection.*

Note: *If using P24 to power a transducer that is to be used to supply the V/I input signal, it may be necessary to connect IICC to CCA.*

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — **Max. Freq.** (F011)

Units — Hz

V/I Input Point 1 Rate

Program ⇒ Torque ⇒ Setpoints

This parameter is used to set the gain and bias of the isolated **V/I** input terminal when the **V/I** terminal is used as the control input while operating in the **Torque Control** mode.

V/I Input Torque Control Setup

Perform the following setup to allow the system to receive **Torque Control** input at the **V/I** input terminal:

• Set **SW301** of the **Terminal Board** to **Voltage** or **Current** (see Figure 9 on pg. 24).

• Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ Frequency Mode 1 ⇒ **V/I**.

• Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ Command Mode Selection ⇒ **Terminal Block**.

Torque Control

Perform the following setup to allow the system to perform **Torque Control** from the **V/I** input terminal:

• Set **V/I Input Point 1 Rate** (F205).

• Set **V/I Input Point 1 Setting** (F201) — the input analog signal level that corresponds to the torque setting at **V/I Input Point 1 Rate**.

• Set **V/I Input Point 2 Rate** (F206).

• Set **V/I Input Point 2 Setting** (F203) — the input analog signal level that corresponds to the torque setting at **V/I Input Point 2 Rate**.

• Provide a **Run** command (**F** and/or **R**).

Torque Control is accomplished by establishing an associated **V/f** output pattern for a given **V/I** input level.

Once set, as the **V/I** input voltage changes or the **V/I** current changes, the output torque of the ASD will vary in accordance with the above settings.

This parameter sets **V/I Input Point 1 Rate** and is the output torque value that is associated with the setting of **V/I Input Point 1 Setting** when operating in the **Torque Control** mode.

This value is entered as 0% to 250% of the rated torque.

Note: *When using the isolated V/I input terminal the IICC terminal must be used as the return (negative) connection.*

Changeable During Run — **Yes**

Minimum — 0.10

Maximum — **Max. Freq.** (F011)

Units — Hz

Analog Input Filter

Program $\Rightarrow$ Frequency $\Rightarrow$ Analog Filter

Analog filtering is applied after the analog reference signal is converted to a digital signal. The type of filtering used is **Rolling Average** over time.

Settings:

    0 — None (1 mS)
    1 — Small (8 mS)
    2 — Medium (16 mS)
    3 — Large (32 mS)
    4 — Huge (64 mS)

The analog input signal is sampled and converted to a digital signal. With no filtering applied, the resulting digital value is scaled for use by the microprocessor of the ASD.

If the filtering selection **Small** is selected, the ASD averages the last **8 mS** of sampled signal and converted (digital) values. The rolling average is updated (every 4 μS) and scaled for use by the microprocessor.

This holds true for the **Medium**, **Large**, and **Huge** selections providing a larger sample to produce the average for use by the microprocessor.

False responses to electrical noise are eliminated with no loss in bandwidth because the value used by the drive is the average value of several samples.

Direct Access Number —   **F209**

Parameter Type — **Selection List**

Factory Default — **None**

Changeable During Run — **Yes**

RR Input Point 1 Setting

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to set the gain and bias of the **RR** input terminal when the **RR** terminal is used as the control input while operating in the **Speed Control** mode or the **Torque Control** mode.

This parameter sets the **RR** input level that is associated with the **RR Input Point 1 Frequency** setting when operating in the **Speed** control mode or is associated with the **RR Input Point 1 Rate** setting when operating in the **Torque Control** mode.

Direct Access Number —   F210

RX Input Point 1 Setting

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to set the gain and bias of the **RX** input terminal when the **RX** terminal is used as the control input while operating in the **Speed Control** mode or the **Torque Control** mode.

This parameter sets the **RX** input level that is associated with **RX Input Point 1 Frequency** when operating in the **Speed Control** mode or is associated with the **RX Input Point 1 Rate** when operating in the **Torque Control** mode.

RX Input Speed Control Setup

Perform the following setup to allow the system to receive **Speed** control input at the **RX** input terminal:

- Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ Frequency Mode 1 ⇒ **RX**.

- Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ Command Mode Selection ⇒ **Terminal Block**.

Speed Control

Perform the following setup to allow the system to perform **Speed** control from the **RX** input terminal:

- Set **RX Input Point 1 Frequency** (F217).

- Set **RX Input Point 1 Setting** (F216) — the input analog signal level that corresponds to the speed setting at **RX Input Point 1 Frequency**.

- Set **RX Input Point 2 Frequency** (F219).

- Set **RX Input Point 2 Setting** (F218) — the input analog signal level that corresponds to the speed setting at **RX Input Point 2 Frequency**.

- Provide a **Run** command (F and/or R).

Once set, as the **RX** input voltage changes, the ASD output speed and/or torque will vary in accordance with the above settings.

This parameter value is entered as -100% to +100% of the **RX** input signal range.

RX Input Point 1 Rate

Program ⇒ Torque ⇒ Setpoints

This parameter is used to set the gain and bias of the **RX** input terminal when the **RX** terminal is used as the control input while operating in the **Torque Control** mode.

RX Input Torque Control Setup

Perform the following setup to allow the system to receive **Torque Control** input at the **RX** input terminal:

- Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ Frequency Mode ⇒ **RX**.

- Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ Command Mode Selection ⇒ **Terminal Block**.

Torque Control

Perform the following setup to allow the system to perform **Torque Control** from the **RX** input terminal:

- Set **RX Input Point 1 Rate** (F220).

- Set **RX Input Point 1 Setting** (F216) — the input analog signal level that corresponds to the torque setting at **RX Input Point 1 Rate**.

- Set **RX Input Point 2 Rate** (F221).

- Set **RX Input Point 2 Setting** (F218) — the input analog signal level that corresponds to the speed setting at **RX Input Point 2 Rate**.

- Provide a **Run** command (F and/or R).

Torque Control is accomplished by establishing an associated **V/f** output pattern for a given **RX** input level.

Once set, as the **RX** input voltage changes, the ASD output speed and/or torque will vary in accordance with the above settings.

This parameter sets **RX Input Point 1 Rate** and is the output torque value that is associated with the setting of **RX Input Point 1 Setting** when operating in the **Torque Control** mode.

This value is entered as -250% to +250% of the rated torque.

RX2 (AI1) Input Point 1 Setting

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to set the gain and bias of the **RX2** (AI1) input terminal when the **RX2** (AI1) terminal is used as the control input while operating in the **Speed Control** mode or the **Torque Control** mode.

Note: *The **Expansion IO Card Option 1** option board (P/N ETB003Z) is required to use this terminal.*

This parameter sets the **RX2** (AI1) input level that is associated with **RX2** (AI1) **Input Point 1 Frequency** when operating in the **Speed Control** mode or is associated with the **RX2** (AI1) **Input Point 1 Rate** when operating in the **Torque Control** mode.

RX2 (AI1) Input Speed Control Setup

Perform the following setup to allow the system to receive **Speed** control input at the **RX2** (AI1) input terminal:

- Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ Frequency Mode 1 ⇒ **RX2**.

- Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ Command Mode Selection ⇒ **Terminal Block**.

Speed Control

Perform the following setup to allow the system to perform **Speed** control from the **RX2** (AI1) input terminal:

- Set **RX2** (AI1) **Input Point 1 Frequency** (F223).

- Set **RX2** (AI1) **Input Point 1 Setting** (F222) — the input analog signal level that corresponds to the speed setting at **RX2** (AI1) **Input Point 1 Frequency**.

- Set **RX2** (AI1) **Input Point 2 Frequency** (F225).

- Set **RX2** (AI1) **Input Point 2 Setting** (F224) — the input analog signal level that corresponds to the speed setting at **RX Input Point 2 Frequency**.

- Provide a **Run** command (F and/or R).

Once set, as the **RX2** (AI1) input voltage changes, the ASD output speed and/or torque will vary in accordance with the above settings.

This parameter value is entered as -100% to +100% of the **RX2** (AI1) input signal range.

See the **Expansion IO Card Option 1** instruction manual (P/N 58685) for more information on the function of this terminal. See parameter F476 and F477 for information on fine-tuning this terminal response.

Perform the following setup to allow the system to perform **Torque Control** from the **RX2** (AI1) input terminal:

- Set **RX2** (AI1) **Input Point 1 Rate** (F226).

- Set **RX2** (AI1) **Input Point 1 Setting** (F222) — the input analog signal level that corresponds to the speed setting at **RX2** (AI1) **Input Point 1 Rate**.

- Set **RX2** (AI1) **Input Point 2 Rate** (F227).

- Set **RX2** (AI1) **Input Point 2 Setting** (F224) — the input analog signal level that corresponds to the speed setting at **RX Input Point 2 Rate**.

- Provide a **Run** command (F and/or R).

Torque Control is accomplished by establishing an associated **V/f** output pattern for a given **RX2** (AI1) input level.

Once set, as the **RX2** (AI1) input voltage changes, the ASD output speed and/or torque will vary in accordance with the above settings.

This parameter sets **RX2** (AI1) **Input Point 1 Rate** and is the output torque value that is associated with the setting of **RX2** (AI1) **Input Point 1 Setting** when operating in the **Torque Control** mode.

This value is entered as -250% to +250% of the rated torque.

See the **Expansion IO Card Option 1** instruction manual (P/N 58685) for more information on the function of this terminal.

Torque Settings

RX2 (AI1) Input Point 2 Rate

Program ⇒ Torque ⇒ Setpoints

This parameter is used to set the gain and bias of the **RX2** (AI1) input terminal when the **RX2** (AI1) terminal is used as the control input while operating in the **Torque Control** mode.

Torque Control is accomplished by establishing an associated **V/f** output pattern for a given **RX2** (AI1) input level.

This parameter sets **RX2** (AI1) **Input Point 2 Rate** and is the output torque value that is associated with the setting of **RX2** (AI1) **Input Point 2 Setting** when operating in the **Torque Control** mode.

This value is entered as -250% to +250% of the rated torque.

See **RX2** (AI1) **Input Point 1 Rate** (F226) for more information on this setting.

Direct Access Number —   F227

Parameter Type — **Numerical**

Factory Default — **100.00**

Changeable During Run — **Yes**

Minimum — -250.00

Maximum — +250.00

Units — %

BIN Input Point 1 Setting

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to set the gain and bias of the **BIN** input terminals when the **BIN** terminals are used as the control input while operating in the **Speed Control** mode.

The discrete input terminals of the **Terminal Board** are used as the **BIN** terminals.

Direct Access Number —   F228

Parameter Type — **Numerical**

Factory Default — **0**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 100

Units — %

BIN Input Speed Control Setup

Perform the following setup to allow the system to receive **Speed** control input at the **BIN** input terminals:

*   Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ Frequency Mode 1 ⇒ **Binary/BCD**.

*   Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ Command Mode Selection ⇒ **Terminal Block**.

*   Program ⇒ Terminal ⇒ **Input Terminals**; select and set the desired discrete input terminals to **Binary Bit**(s) **0 – 7** (or 0 – MSB). The binary input byte will control the speed of the motor.

*   Program ⇒ Terminal ⇒ **Input Terminals**; select and set a discrete input terminal to **Binary Data Write**. Activation of the **Binary Data Write** terminal will transfer the status of the **Binary Bit**(s) **0 – 7** (or 0 – MSB) to the control board for speed control.

Frequency Settings

Speed Control

Perform the following setup to allow the system to perform **Speed** control from the **BIN** input terminals:

*   Set **BIN Input Point 1 Frequency** (F229).

*   Set the **BIN** input value (% of 255$_D$) (F228) that represents **BIN Input Point 1 Frequency**.

*   Set **BIN Input Point 2 Frequency** (F231).

*   Set the **BIN** input value (% of 255$_D$) (F230) that represents **BIN Input Point 2 Frequency**.

*   Provide a **Run** command (F and/or R).

Note: *255$_D$ is the decimal equivalent of the 8-bit BIN byte with all input terminals set to 1 (255 decimal = 11111111 binary).*

Once set, as the **BIN** input signal changes are transferred to the control board, the output frequency of the ASD will vary in accordance with the above settings.

This parameter sets **BIN Input Point 1 Setting** and is entered as 0% to 100% of the of the range represented by the **BIN** binary input byte 11111111 (255$_D$) or the binary bit(s) 0 – MSB.

BIN Input Point 1 Frequency

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to set the speed of the **BIN** input terminals when the **BIN** terminals are used as the control input.

This parameter sets **BIN Input Point 1 Frequency** and is the frequency that is associated with the setting of **BIN Input Point 1 Setting**.

See **BIN Input Point 1 Setting** (F228) for further information on this setting.

Direct Access Number —   F229

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **Yes**

Minimum — 0

Maximum — **Max. Freq.** (F011)

Units — Hz

BIN Input Point 2 Setting

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to set the speed of the **BIN** input terminals when the **BIN** terminals are used as the control input.

This parameter sets the **BIN** input signal that is associated with **BIN Input Point 2 Frequency**.

This value is entered as 0% to +100% of the **BIN** input signal range.

See **BIN Input Point 1 Setting** (F228) for further information on this setting.

Direct Access Number —   F230

Parameter Type — **Numerical**

Factory Default — **100**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 100

Units — %

BIN Input Point 2 Frequency

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to set the speed of the **BIN** input terminals when the **BIN** terminal are used as the control input.

This parameter sets **BIN Input Point 2 Frequency** and is the frequency that is associated with the setting of **BIN Input Point 2 Setting**.

See **BIN Input Point 1 Setting** (F228) for further information on this setting.

Direct Access Number —   F231

Parameter Type — **Numerical**

Factory Default — **60.00**

Changeable During Run — **Yes**

Maximum — 0.00

Maximum — **Max. Freq.** (F011)

Units — Hz

PG Input Point 1 Setting

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to set the gain and bias of the **PG** input terminal of the option board when a shaft-mounted encoder is used as the control input while operating in the **Speed Control** mode.

Note: See Instruction Manual P/N 58687 for more information on the
*   PG Option Board.*

Direct Access Number —   F234

Parameter Type — **Numerical**

Factory Default — **0.0**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 100.0

Units — %

PG Input Speed Control Setup

Frequency Settings

Perform the following setup to allow the system to receive **Speed** control input at the **PG** input terminal:

*   Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ Frequency Mode 1 ⇒ **Pulse Input** (option).

*   Program ⇒ Fundamental ⇒ Standard Mode Selection ⇒ **Command Mode Selection** ⇒ (any setting).

*   Provide a **Run** command (F and/or R).

Speed Control

Perform the following setup to allow the system to perform **Speed** control from the **PG** input terminals:

*   Set **PG Point 1 Frequency** (F235).

*   Set the **PG** input value (F234) that represents **PG Point 1 Frequency**.

*   Set **PG Point 2 Frequency** (F237).

*   Set the **PG** input value (F236) that represents **PG Point 2 Frequency**.

Once set, as the **PG** input pulse count rate changes, the output frequency of the drive will vary in accordance with the above settings.

This parameter sets the **PG** input pulse count that represents **Reference Setpoint 1** (frequency). The range of values for this parameter is 0% to 100% of the **PG** input pulse count range.

Note: Further application-specific PG settings may be performed from
*   the following path: Program ⇒ Feedback ⇒ PG Settings.*

PG Input Point 1 Frequency

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to set the speed of the **PG** input terminals when the **PG** terminal is used as the control input.

This parameter sets **PG Point 1 Frequency** and is the frequency that is associated with the setting of **PG Point 1 Setting**.

See **PG Point 1 Setting** (F234) for further information on this setting.

Direct Access Number —   F235

Parameter Type — **Numerical**

Factory Default — **0.00**
Changeable During Run — **Yes**

Minimum — 0.00

Maximum — **Max. Freq.** (F011)

Units — Hz

PG Input Point 2 Setting	**Direct Access Number — F236**
Program ⇒ Frequency ⇒ Speed Reference Setpoints	Parameter Type — **Numerical**
	Factory Default — **0**
This parameter is used to set the direction and speed of the **PG** input terminals when the **PG** terminals are used as the control input.	Changeable During Run — **Yes**
	Minimum — 0
This parameter sets the **PG** input signal that is associated with **PG Point 2 Frequency**.	Maximum — 100
This value is entered as 0% to 100% of the **PG** input signal range.	Units — %
See **PG Point 1 Setting** (F234) for further information on this setting.	

PG Input Point 2 Frequency	**Direct Access Number — F237**
Program ⇒ Frequency ⇒ Speed Reference Setpoints	Parameter Type — **Numerical**
	Factory Default — **60.00**
This parameter is used to set the direction and speed of the **PG** input terminals when the **PG** terminal are used as the control input.	Changeable During Run — **Yes**
	Minimum — 0.00
This parameter sets **PG Point 2 Frequency** and is the frequency that is associated with the setting of **PG Point 2 Setting**.	Maximum — **Max. Freq.** (F011)
See **PG Point 1 Setting** (F234) for further information on this setting.	Units — Hz

Start Frequency	**Direct Access Number — F240**
Program ⇒ Special ⇒ Frequency Control	Parameter Type — **Numerical**
	Factory Default — **0.10**
The output of the drive will remain at 0.0 Hz until the programmed speed value exceeds this setting during startup. Once exceeded during startup, the output frequency of the drive will accelerate to the programmed setting.	Changeable During Run — **Yes**
	Minimum — 0.00
Output frequencies below the **Start Frequency** will not be output from the drive during startup. However, once reaching the **Start Frequency**, speed values below the **Start Frequency** may be output from the drive.	Maximum — **Max. Freq.** (F011)
	Units — Hz
If the setting of this parameter results in an over-current condition at startup, reduce the setting of this parameter to a value less than the rated slippage of the motor.	
If zero-speed torque is required, set this parameter and F243 to 0.0 Hz.	
This setting will override the setting of F244 if this setting has a higher value.	
This parameter setting is used during a **Jog** as the **Lower-Limit Frequency** (see F260).	

Run Frequency	**Direct Access Number — F241**
Program ⇒ Special ⇒ Frequency Control	Parameter Type — **Numerical**
	Factory Default — **0.00**
This parameter establishes a center frequency (**Run Frequency**) of a frequency band.	Changeable During Run — **Yes**
	Minimum — 0.00
Parameter F242 provides a plus-or-minus value for the **Run Frequency**; thus, establishing a frequency band.	Maximum — **Max. Freq.** (F011)
	Units — Hz
During acceleration, the drive will not output a signal to the motor until the lower level of the band is reached.	
During deceleration, the drive will continue to output the programmed deceleration signal to the motor until the lower level of the band is reached; at which time the output will go to 0.0 Hz.	

Run Frequency Hysteresis

Program ⇒ Special ⇒ Frequency Control

This parameter provides a plus-or-minus value for the **Run Frequency** setting (F241).

Direct Access Number —	**F242**
Parameter Type —	**Numerical**
Factory Default —	**0.00**
Changeable During Run —	**Yes**
Minimum —	0.00
Maximum —	30.0
Units —	Hz

End Frequency

Program ⇒ Special ⇒ Frequency Control

This parameter sets the lowest frequency that the drive will recognize during deceleration before the drive goes to 0.0 Hz.

Direct Access Number —	**F243**
Parameter Type —	**Numerical**
Factory Default —	**0.00**
Changeable During Run —	**Yes**
Minimum —	0.00
Maximum —	30.0
Units —	Hz

0 Hz Dead Band Signal

Program ⇒ Special ⇒ Special Parameters

This parameter sets an output frequency threshold that, until the commanded frequency surpasses this setting, the ASD will output 0.0 Hz to the motor.

This setting will override the **Start Frequency** setting (F240) if this setting has a higher value.

Direct Access Number —	**F244**
Parameter Type —	**Numerical**
Factory Default —	**0.00**
Changeable During Run —	**Yes**
Minimum —	0.00
Maximum —	5.00
Units —	Hz

DC Injection Braking Start Frequency

Program ⇒ Protection ⇒ DC Braking

During deceleration this is the frequency at which **DC Injection Braking** will start.

DC Injection Braking

DC Injection Braking is a braking system used with 3-phase motors. Unlike conventional brakes, there is no physical contact between the rotating shaft and a stationary brake pad or drum. When braking is required, the drive outputs a DC current that is applied to the windings of the motor to quickly brake the motor. The braking current stops when the time entered in F252 times out.

The intensity of the DC current used while braking determines how fast the motor will come to a stop and may be set at F251. The intensity setting is entered as a percentage of the full load current of the ASD.

DC Injection Braking is also used to preheat the motor or to keep the rotor from spinning freely when the motor is off by providing a pulsating DC current into the motor at the **Carrier Frequency**. This feature may be enabled at F254.

Direct Access Number —	**F250**
Parameter Type —	**Numerical**
Factory Default —	**0.00**
Changeable During Run —	**Yes**
Minimum —	0.00
Maximum —	120.00
Units —	Hz

DC Injection Braking Current

Program ⇒ Protection ⇒ DC Braking

This parameter sets the percentage of the rated current of the drive that will be used for **DC Injection Braking**. A larger load will require a higher setting.

Direct Access Number —	**F251**
Parameter Type —	**Numerical**
Factory Default —	**50**
Changeable During Run —	**Yes**
Minimum —	0
Maximum —	100
Units —	%

DC Injection Braking Time

Program ⇒ Protection ⇒ DC Braking

This parameter setting is used to set the on-time duration of the **DC Injection Braking**.

Direct Access Number —	**F252**
Parameter Type —	**Numerical**
Factory Default —	**1.0**
Changeable During Run —	**Yes**
Minimum —	0.0
Maximum —	20.0
Units —	Seconds

Forward/Reverse DC Injection Braking Priority

Program ⇒ Protection ⇒ DC Braking

This parameter setting determines if **DC Injection Braking** is to be used during a change in the direction of the motor.

Settings:

   0 — Disabled
   1 — Enabled

Direct Access Number —	**F253**
Parameter Type —	**Selection List**
Factory Default —	**Disabled**
Changeable During Run —	**Yes**

Motor Shaft Fixing Control

Program ⇒ Protection ⇒ DC Braking

This parameter **Enables/Disables** a continuous DC injection at half of the amperage setting of F251 into a stopped motor. This feature is useful in preheating the motor or to keep the rotor from spinning freely.

Motor Shaft Stationary Control starts after the DC injection brake stops the motor and continues until **ST – CC** is opened, power is turned off, an **Emergency Off** command is received, or this parameter is changed.

Enabling this feature will also require a non-zero entry at F250.

Settings:

   0 — Disabled
   1 — Enabled

Direct Access Number —	**F254**
Parameter Type —	**Selection List**
Factory Default —	**Disabled**
Changeable During Run —	**Yes**

0 Hz Command Output

Program ⇒ Special ⇒ Special Parameters

This parameter is used to set the go-to-zero method to be used by the ASD in the event that the ASD is commanded to go to zero Hz.

Settings:

   0 — Standard (DC Injection Braking)
   1 — 0 Hz Command

Direct Access Number —	**F255**
Parameter Type —	**Selection List**
Factory Default —	**Standard (DC Injection Braking)**
Changeable During Run —	**No**

Time Limit For Lower-Limit Frequency Operation

Program ⇒ Fundamental ⇒ Frequency Settings

This parameter sets the time that the ASD is allowed to operate below the **Lower-Limit** setting before an alarm and subsequent fault is incurred.

Direct Access Number —	**F256**
Parameter Type —	**Numerical**
Factory Default —	**0.0**
Changeable During Run —	**Yes**
Minimum —	0.0
Maximum —	600.0
Units —	Seconds

Jog Frequency

Program ⇒ Frequency ⇒ Jog Settings

This parameter sets the output frequency of the drive during a **Jog**. **Jog** is the term used to describe turning the motor on for small increments of time and is used when precise positioning of motor-driven equipment is required.

The **Jog** function may be initiated from the **EOI**, remotely via the **Terminal Board**, or using **Communications** (for more information on using Communications for Jogging, see the Communications manual P/N 53840).

The **Jog** function can be activated from zero Hz or from any frequency below the **Jog Run** frequency (Jog can only increase the speed). A **Jog** command will not be recognized when the running frequency is above the **Jog Run** frequency setting. The **Jog** command has priority over other **Run** commands and is not limited by the **Upper-Limit** setting of parameter F012.

Jog commands received while running for the opposite direction will follow the programmed stopping method of F261 until reaching zero Hz and will then ramp to the programmed **Jog Frequency** and direction.

Jog Setup and Execution

To initiate a **Jog Run** from the EOI perform the following:

1. Enable the **Jog** function at F262.

2. Set the **Command Mode Selection** (F003) to **EOI** (Keypad).

3. Assign the **Jog Run** setting to a discrete input terminal (see Table 5 on pg. 234).

   Note: Any unused discrete input terminal may be used for the Jog Run setting.

4. Set up a **Jog Stop Pattern** at F261.

5. Set the **Input Terminal Priority** (F106) function to **Disable** to receive **Jog** commands from the EOI.

6. Set the **Local/Remote** key to **Local**.

7. Activate the **Jog Run** terminal (from step 3) and provide a **Run** command (F or R).

   Note: Simultaneous F and R activations will perform as setup at parameter F105.

8. Press the **Run** key and the ASD will output the frequency setting of F260 for the duration of the activation.

To initiate a **Jog Run** from the **Terminal Board** perform the following:

1. Using the setup above, set the **Input Terminal Priority** (F106) function (from step 5) to **Enable** to receive **Jog** commands from the **Terminal Board** using the **Jog Run** terminal without regard to the **Local/Remote** setting.

2. Use the **Jog Run** terminal of step 3 above to activate the **Jog** function.

Direct Access Number — F260

Parameter Type — **Numerical**

Factory Default — **5.00**

Changeable During Run — **Yes**

Minimum — F240 Setting

Maximum — 20.00

Units — Hz

Jog Stop Pattern

Program ⇒ Frequency ⇒ Jog Settings

This parameter sets the stopping method used while operating in the **Jog** mode.

Note: *This parameter setting is used for the **Jog** operation only. The*
          ***Emergency Off** stopping method setting of parameter F603 has*
          priority over this setting and changes made here do not affect the
          function or setting of parameter F603.

Settings:

  0 — Deceleration Stop
  1 — Coast Stop
  2 — DC Injection Braking Stop

Direct Access Number —   F261

Parameter Type — **Selection List**

Factory Default — **Deceleration Stop**

Changeable During Run — **Yes**

EOI (Panel) Operation Jog Mode

Program ⇒ Frequency ⇒ Jog Settings

This parameter enables the **Jog** command to be received from the **EOI**. When disabled the **Jog** command received from the **EOI** is ignored.

Jog commands may also be received from the **Terminal Board**. Priority as to which is allowed to override the other is selected at F106.

The priority selection at F106 enables the selected source for **Jog** control and disables the other. The F106 setting overrides this parameter setting.

Settings:

  0 — Disabled
  1 — Enabled

Direct Access Number —   F262

Parameter Type — **Selection List**

Factory Default — **Disabled**

Changeable During Run — **Yes**

UP/DOWN Frequency (up) Response Time

No Path — Direct Access Only

This parameter functions in conjunction with the parameter settings of F265, F266, F267, F268, and F269. The purpose of these settings is to setup the ASD to allow an externally-supplied discrete input signal to control the output frequency of the ASD.

This method uses the discrete input terminal settings **UP/DOWN Frequency (up)** and **UP/DOWN Frequency (down)** to change the ASD speed. Activation of either terminal increases or decreases the output frequency at the **Accel 1** or **Decel 1** rates, respectively.

Depending on the **Delay** setting, the **UP/DOWN Frequency (up/down)** terminal may perform **1)** the increase/decrease function for the duration of activation or **2)** the **UP/DOWN Frequency (up/down)** terminal may act as a momentary contact that loads a new commanded frequency upon activation.

In either case, to activate-and-hold will continue the up or down function until reaching the **Upper-Limit Frequency** or the **Lower-Limit Frequency**, respectively. At which point further activation will be ignored.

See Figure 29 on pg. 130 for more information on the **UP/DOWN Frequency** function.

Setup Requirements

F003 — Selects the **Command** control source; set to **Terminal Block**.

F004 — Selects the **Frequency Control Mode 1** control source; set to **UP/DOWN Frequency**.

F207 — Selects the **Frequency Control Mode 2** control source; set to **UP/DOWN Frequency** if used.

Set one unused discrete input terminal to **UP/DOWN Frequency (up)** and one unused discrete input terminal to **UP/DOWN Frequency (down)**.

F264 — Sets the system-response delay to the initial activation of the discrete input terminal **UP/DOWN Frequency (up)**. Also sets the response delay of subsequent terminal activations of the **UP/DOWN Frequency (up)** terminal during an activate-and-hold.

F265 — Sets the frequency increase amount for each activation of the **UP/ DOWN Frequency (up)** terminal activation. The rate of the frequency increase is set at **Acceleration Time 1** (F009).

F266 — Sets the system-response delay to the initial activation of the discrete input terminal **UP/DOWN Frequency (down)**. Also sets the activation delay of subsequent terminal activations of the **UP/DOWN Frequency (down)** terminal during an activate-and-hold.

F267 — Sets the frequency decrease amount for each activation of the **UP/ DOWN Frequency (down)** terminal activation. The rate of the frequency decrease is set at **Deceleration Time 1** (F010).

F268 — At power up or after a reset, this parameter setting is used to provide a starting frequency for the **UP/DOWN Frequency** function.

F269 — At power down while running, and when enabled, this parameter writes the running frequency into the F268 location and, upon a system restart, uses this setting as the startup frequency.

Provide a **Run** command (F or R). The motor will run at the F268 setting.

Direct Access Number — F264

Parameter Type — **Numerical**

Factory Default — **0.1**

Changeable During Run — **Yes**

Minimum — 0.0

Maximum — 10.0

Units — Seconds

Up/Down Frequency (up) Mode

Up/Down Frequency (down) Mode

UP/DOWN Frequency (up) Frequency Step

No Path — Direct Access Only

This parameter sets the frequency increase amount for each activation of the **UP/DOWN Frequency (up)** terminal activation. The rate of the frequency increase is set at Acceleration Time 1 (F009).

See F264 for more information on this parameter.

Direct Access Number — F265
Parameter Type — **Numerical**
Factory Default — **0.10**
Changeable During Run — **Yes**
Minimum — 0.00
Maximum — **Max. Freq.** (F011)
Units — Hz

UP/DOWN Frequency (down) Response Time

No Path — Direct Access Only

This parameter sets the system-response delay to the initial activation of the discrete input terminal **UP/DOWN Frequency (down)**. Also sets the activation delay of subsequent terminal activations of the **UP/DOWN Frequency (down)** terminal during an activate-and-hold.

See F264 for more information on this parameter.

Direct Access Number — F266
Parameter Type — **Numerical**
Factory Default — **0.1**
Changeable During Run — **Yes**
Minimum — 0.0
Maximum — 10.0
Units — Seconds

UP/DOWN Frequency (down) Frequency Step

No Path — Direct Access Only

This parameter sets the frequency decrease amount for each activation of the **UP/DOWN Frequency (down)** terminal activation. The rate of the frequency decrease is set at Deceleration Time 1 (F010).

See F264 for more information on this parameter.

Direct Access Number — F267
Parameter Type — **Numerical**
Factory Default — **0.10**
Changeable During Run — **Yes**
Minimum — 0.00
Maximum — **Max. Freq.** (F011)
Units — Hz

Initial UP/DOWN Frequency

No Path — Direct Access Only

At power up or after a reset, this parameter setting is used to provide a starting frequency for the **UP/DOWN Frequency** function.

See F269 for more information on this parameter setting.

Direct Access Number — F268
Parameter Type — **Numerical**
Factory Default — **0.00**
Changeable During Run — **Yes**
Minimum — **Lower-Limit** (F013)
Maximum — **Upper-Limit** (F012)
Units — Hz

Initial UP/DOWN Frequency Rewriting

No Path — Direct Access Only

At power down, and when enabled, this parameter writes the running frequency into the F268 location and, upon a system restart, uses this setting as the startup frequency.

Disable this parameter and set parameter F268 to the desired startup frequency if the same starting frequency is required at each startup.

Note: *This parameter setting may be different at each startup when enabled.*

Settings:

    0 — Disabled
    1 — Enabled (overwrite F268 at Power Off or Reset)

Direct Access Number — F269
Parameter Type — **Selection List**
Factory Default — **Enabled**
Changeable During Run — **Yes**

Figure 29. UP/Down Frequency Operation Control Timing Diagram.
Jump Frequency 1

Program ⇒ Special ⇒ Jump Frequencies

In conjunction with parameter F271, this parameter establishes a user-defined frequency range: the **Jump Frequency** and a plus-or-minus value.

During acceleration, the output frequency of the drive will hold at the lower level of the **Jump Frequency** range until the programmed acceleration ramp reaches the upper level of the **Jump Frequency** range. At which time the output frequency of the drive will accelerate to the upper level of the **Jump Frequency** range and continue upward as programmed.

During deceleration, the output frequency of the drive will hold at the upper level of the **Jump Frequency** range until the programmed deceleration ramp reaches the lower level of the **Jump Frequency** range. At which time the output frequency of the drive will decelerate to the lower level of the **Jump Frequency** range and continue downward as programmed.

Once set up and enabled, it is on in all control modes.

User-selected frequencies may be jumped to avoid the negative effects of mechanical resonance.

Direct Access Number —   **F270**

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — **Max. Freq.** (F011)

Units — Hz

Jump Frequency 1 Bandwidth	**Direct Access Number —** **F271**
Program ⇒ Special ⇒ Jump Frequencies This parameter establishes a plus-or-minus value for **Jump Frequency 1** (see F270).	Parameter Type — **Numerical** Factory Default — **0.00** Changeable During Run — **Yes** Minimum — 0.00 Maximum — 30.00 Units — Hz

Jump Frequency 2	**Direct Access Number —** **F272**
Program ⇒ Special ⇒ Jump Frequencies Same as **Jump Frequency 1** (F270) and is used when multiple frequencies are to be jumped (see the plus-or-minus value setting at F273). When multiple jump frequencies overlap, the system will recognize the lowest and the highest frequencies as one jump range.	Parameter Type — **Numerical** Factory Default — **0.00** Changeable During Run — **Yes** Minimum — 0.00 Maximum — **Max. Freq.** (F011) Units — Hz

Jump Frequency 2 Bandwidth	**Direct Access Number —** **F273**
Program ⇒ Special ⇒ Jump Frequencies This parameter establishes a plus-or-minus value for **Jump Frequency 2** (F272).	Parameter Type — **Numerical** Factory Default — **0.00** Changeable During Run — **Yes** Minimum — 0.00 Maximum — 30.0 Units — Hz

Jump Frequency 3	**Direct Access Number —** **F274**
Program ⇒ Special ⇒ Jump Frequencies Same as **Jump Frequency 1** (F270) and is used when multiple frequencies are to be jumped (see the plus-or-minus value setting at F275). When multiple jump frequencies overlap, the system will recognize the lowest and the highest frequencies as one jump range.	Parameter Type — **Numerical** Factory Default — **0.00** Changeable During Run — **Yes** Minimum — 0.00 Maximum — **Max. Freq.** (F011) Units — Hz

Jump Frequency 3 Bandwidth	**Direct Access Number —** **F275**
Program ⇒ Special ⇒ Jump Frequencies This parameter establishes a plus-or-minus value for **Jump Frequency 3** (F274).	Parameter Type — **Numerical** Factory Default — **0.00** Changeable During Run — **Yes** Minimum — 0.00 Maximum — 30.0 Units — Hz

Preset Speed 8	**Direct Access Number —** **F287**
Program ⇒ Frequency ⇒ Preset Speeds This parameter assigns an output frequency to binary number 1000 and is identified as **Preset Speed 8**. The binary number is applied to **S1 – S4** of the **Terminal Board** to output the **Preset Speed** (see F018 for more information on this parameter).	Parameter Type — **Numerical** Factory Default — **0.00** Changeable During Run — **Yes** Minimum — **Lower-Limit** (F013) Maximum — **Upper-Limit** (F012) Units — Hz

Preset Speed 9	**Direct Access Number —** **F288**
Program ⇒ Frequency ⇒ Preset Speeds	Parameter Type — **Numerical**
	Factory Default — **0.0**
This parameter assigns an output frequency to binary number 1001 and is identified as **Preset Speed 9**. The binary number is applied to **S1 – S4** of the **Terminal Board** to output the **Preset Speed** (see F018 for more information on this parameter).	Changeable During Run — **Yes**
	Minimum — **Lower-Limit** (F013)
	Maximum — **Upper-Limit** (F012)
	Units — Hz

Preset Speed 10	**Direct Access Number —** **F289**
Program ⇒ Frequency ⇒ Preset Speeds	Parameter Type — **Numerical**
	Factory Default — **0.00**
This parameter assigns an output frequency to binary number 1010 and is identified as **Preset Speed 10**. The binary number is applied to **S1 – S4** of the **Terminal Board** to output the **Preset Speed** (see F018 for more information on this parameter).	Changeable During Run — **Yes**
	Minimum — **Lower-Limit** (F013)
	Maximum — **Upper-Limit** (F012)
	Units — Hz

Preset Speed 11	**Direct Access Number —** **F290**
Program ⇒ Frequency ⇒ Preset Speeds	Parameter Type — **Numerical**
	Factory Default — **0.00**
This parameter assigns an output frequency to binary number 1011 and is identified as **Preset Speed 11**. The binary number is applied to **S1 – S4** of the **Terminal Board** to output the **Preset Speed** (see F018 for more information on this parameter).	Changeable During Run — **Yes**
	Minimum — **Lower-Limit** (F013)
	Maximum — **Upper-Limit** (F012)
	Units — Hz

Preset Speed 12	**Direct Access Number —** **F291**
Program ⇒ Frequency ⇒ Preset Speeds	Parameter Type — **Numerical**
	Factory Default — **0.00**
This parameter assigns an output frequency to binary number 1100 and is identified as **Preset Speed 12**. The binary number is applied to **S1 – S4** of the **Terminal Board** to output the **Preset Speed** (see F018 for more information on this parameter).	Changeable During Run — **Yes**
	Minimum — **Lower-Limit** (F013)
	Maximum — **Upper-Limit** (F012)
	Units — Hz

Preset Speed 13	**Direct Access Number —** **F292**
Program ⇒ Frequency ⇒ Preset Speeds	Parameter Type — **Numerical**
	Factory Default — **0.00**
This parameter assigns an output frequency to binary number 1101 and is identified as **Preset Speed 13**. The binary number is applied to **S1 – S4** of the **Terminal Board** to output the **Preset Speed** (see F018 for more information on this parameter).	Changeable During Run — **Yes**
	Minimum — **Lower-Limit** (F013)
	Maximum — **Upper-Limit** (F012)
	Units — Hz

Preset Speed 14	**Direct Access Number —** **F293**
Program ⇒ Frequency ⇒ Preset Speeds	Parameter Type — **Numerical**
	Factory Default — **0.00**
This parameter assigns an output frequency to binary number 1110 and is identified as **Preset Speed 14**. The binary number is applied to **S1 – S4** of the **Terminal Board** to output the **Preset Speed** (see F018 for more information on this parameter).	Changeable During Run — **Yes**
	Minimum — **Lower-Limit** (F013)
	Maximum — **Upper-Limit** (F012)
	Units — Hz

Preset Speed 15

Program ⇒ Frequency ⇒ Preset Speeds

This parameter assigns an output frequency to binary number 1111 and is identified as **Preset Speed 15**. The binary number is applied to **S1 – S4** of the **Terminal Board** to output the **Preset Speed** (see F018 for more information on this parameter).

Direct Access Number — F294

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **Yes**

Minimum — **Lower-Limit** (F013)

Maximum — **Upper-Limit** (F012)

Units — Hz

PWM Carrier Frequency

Program ⇒ Special ⇒ Carrier Frequency

This parameter sets the frequency of the pulse width modulation signal applied to the motor.

Note: *When operating in the **Vector Control** mode the carrier frequency should be set to 2.2 kHz or above.*

Note: *If the PWM carrier frequency is set at 2.0 kHz or above, it cannot be decreased below 2.0 kHz while running. If the PWM carrier frequency is set at 1.9 kHz or below, it cannot be increased above 2.0 kHz while running. Either change requires that the ASD be stopped and restarted for the changes to take effect.*

Direct Access Number — F300

Parameter Type — **Numerical**

Factory Default — **2.200**

Changeable During Run — **No**

Minimum — 1.0

Maximum — **(ASD-Dependent)**

Units — kHz

Auto Restart Selection

Program ⇒ Protection ⇒ Retry/Restart

This parameter **Enables/Disables** the ability of the drive to start into a spinning motor when the **ST – CC** connection opens momentarily and is then closed (Break/Make ST) or after a power interruption (momentary power failure).

Settings:

    0 — Off
    1 — Enabled (at Power Failure)
    2 — Enabled (at Make-Break ST-CC)
    3 — Enabled (at Make-Break ST-CC or Power Failure)
    4 — Enabled (at Run)

Direct Access Number — F301

Parameter Type — **Selection List**

Factory Default — **Off**

Changeable During Run — **No**

Regenerative Power Ridethrough Mode

Program ⇒ Protection ⇒ Under-Voltage/Ridethrough

This parameter determines the motor control response of the drive in the event of a momentary power outage or under-voltage condition.

During a **Ridethrough**, regenerative energy is used to maintain the control circuitry settings for the duration of the **Ridethrough**; it is not used to drive the motor. The motor(s) of the system are stopped and then restarted automatically if so configured.

In a multiple-motor application, there will be a requirement to synchronize the stopping and restarting of the motors as not to cause breakage in the product being processed by the motors stopping/starting at different times (e.g., wire spools, bobbin winder for textile machines, etc.). Parameters F317 and F318 must be setup to synchronize motor operation as to avoid breakage in these types of applications.

Note: *If used to restart the motors, the Retry setup of* **F301** *is required.*

Note: *The* **Jog** *function will not operate while in the* **Synchronized Decel/Accel** *mode.*

Settings:

    0 — Off
    1 — Ridethrough On
    2 — Decel Stop
    3 — Synchronized ACC/DEC (TB)
    4 — Synchronized ACC/DEC (TB + Power Off)

Ridethrough Setup Requirements

1.   Select the **Ridethrough Mode** at F302.

2.   Select the **Ridethrough Time** at F310.

3.   Select the **Synchronized Stop/Start Times** at F317/F318 (if required).

Note: *F317 and F318 are not functional while operating in the* **Torque** *or* **Position** *control modes, or for the* **Jog Run** *function (**F260**).*

4.   Set a discrete input terminal to **Power Failure Synchronized Signal** and activate the terminal to enable the **Synchronized Accel/Decel** function.

5.   Select the **Ridethrough Control Level** at F629.

Direct Access Number —   F302

Parameter Type — **Selection List**

Factory Default — **Off**

Changeable During Run — **Yes**

Retry Selection

Program ⇒ Protection ⇒ Retry/Restart

After a trip has occurred, this parameter sets the number of times that an automatic system restart is attempted for a qualified trip.

The trip conditions listed below will not initiate the automatic **Retry/Restart** function:

- Input Phase Loss (Input Phase Failure)
- Output Phase Loss (Output Phase Failure)
- Output Current Protection Fault
- Output Current Detector Error
- Load Side Over-Current at Start
- Earth Fault (Ground Fault)
- Over-Current During Acceleration
- Arm Over-Current at Start-Up
- DBR Resistor Over-Current
- Low-Current
- Voltage Drop In Main Circuit
- EEPROM Data Fault (EEPROM Fault)
- Flash Memory/Gate Array/RAM-ROM Fault
- CPU Fault
- Emergency Off (EMG)
- Communication Error
- Option Fault
- Sink/Source Setting Error
- Over-Speed Error
- Over-Torque
- Key Error
- External Thermal Error
- Externally-Controlled Interrupt

See the section titled System Setup Requirements on pg. 8 for more information on this setting.

Direct Access Number —   F303

Parameter Type — **Numerical**

Factory Default — **00**

Changeable During Run — **Yes**

Minimum — 00

Maximum — 10

Dynamic Braking

Program ⇒ Protection ⇒ Dynamic Braking

This parameter **Enables/Disables** the **Dynamic Braking** system.

Settings:

0 — Off
1 — On with Overload Detection
2 — On without Overload Detection

Dynamic Braking uses the transistor **IGBT7** to dissipate the bus voltage when required.

IGBT7 is a standard item on the 25 HP and below H9 ASD 230-volt systems and is standard on the 400 HP and below for the for the 460-volt systems. **IGBT7** is optional for all remaining systems.

Dynamic Braking

Dynamic Braking is used to prevent over-voltage faults during rapid deceleration or constant speed run on cyclic overhauling applications.

Dynamic Braking dissipates regenerated energy in the form of heat. When using a DBR use thermal protection.

The resistive load is connected across terminals **PA** and **PB** (non-polarized). Using a low-value, high-wattage resistance as a load for the generated current, the resistive load dissipates the induced energy.

Dynamic Braking helps to slow the load quickly; it cannot act as a holding brake.

The **Dynamic Braking** function may be setup and enabled by connecting a braking resistor from terminal **PA** to **PB** of the drive and providing the proper information at F304, F308, and F309.

See the section titled Dynamic Braking System Specifications on pg. 266 for more information on using the DBR system and for assistance in selecting the appropriate resistor for a given application.

Direct Access Number — F304
Parameter Type — **Selection List**
Factory Default — **Off**
Changeable During Run — **No**

Over-Voltage Limit Operation

Program ⇒ Protection ⇒ Stall

This parameter enables the **Over-Voltage Limit** function. This feature is used to set the upper DC bus voltage threshold that, once exceeded, will cause an **Over-Voltage Stall**.

An **Over-Voltage Stall** increases the output frequency of the drive during deceleration for a specified time in an attempt to prevent an **Over-Voltage Trip**.

If the over-voltage threshold level setting of parameter F626 is exceeded for over 4 mS, an **Over-Voltage Trip** will be incurred.

Note: *This parameter setting may increase deceleration times.*

Settings:

0 — Enabled (Over-voltage Stall)
1 — Disabled
2 — Enabled (Forced Shorted Deceleration)
3 — Enabled (Forced Dynamic Braking Deceleration)

Direct Access Number — F305
Parameter Type — **Selection List**
Factory Default — **(ASD-Dependent)**
Changeable During Run — **Yes**

Supply Voltage Correction

Program ⇒ Protection ⇒ Base Frequency Voltage

This parameter **Enables/Disables** the **Voltage Compensation** function.

When **Enabled**, this function provides a constant V/f ratio during periods of input voltage fluctuations.

Settings:

    0 — Disabled (Output Voltage Unlimited)
    1 — Enabled (Supply Voltage Compensation)
    2 — Disabled (Output Voltage Limited)
    3 — Enabled (Supply Voltage Compensation w/Output Voltage Limited)

Direct Access Number — F307
Parameter Type — **Selection List**
Factory Default — **Disabled**
Changeable During Run — **No**

Dynamic Braking Resistance

Program ⇒ Protection ⇒ Dynamic Braking

This parameter is used to input the resistive value of the **Dynamic Braking Resistor** being used.

Light-duty and heavy-duty resistors vary from a few ohms to several hundred ohms. The appropriate resistance size will be typeform- <u>and</u> application-specific.

See the section titled Dynamic Braking System Specifications on pg. 266 for more information on using the DBR system and for assistance in selecting the appropriate resistor for a given application.

Note: *Using a resistor value that is too low may result in system damage.*

Direct Access Number — F308
Parameter Type — **Numerical**
Factory Default — **(ASD-Dependent)**
Changeable During Run — **No**
Minimum — 0.5
Maximum — 1000.0
Units — Ω

Continuous Dynamic Braking Capacity

Program ⇒ Protection ⇒ Dynamic Braking

This parameter is used to input the wattage of the **Dynamic Braking Resistor**.

See the section titled Dynamic Braking System Specifications on pg. 266 for more information on using the DBR system.

Note: *Using a resistor with a wattage rating that is too low may result in system damage.*

Direct Access Number — F309
Parameter Type — **Numerical**
Factory Default — **(ASD-Dependent)**
Changeable During Run — **No**
Minimum — 0.01
Maximum — 600.00
Units — kW

Ridethrough Time

Program ⇒ Protection ⇒ Retry/Restart

In the event of a momentary power outage, this parameter determines the length of the **Ridethrough** time.

The **Ridethrough** will be maintained for the number of seconds set using this parameter.

See parameter F302 for more information on the Ridethrough function.

Note: *The actual **Ridethrough Time** is load-dependent.*

Direct Access Number — F310
Parameter Type — **Numerical**
Factory Default — **2.0**
Changeable During Run — **Yes**
Minimum — 0.1
Maximum — 320.0
Units — Seconds

Forward Run/Reverse Run Disable

Program ⇒ Frequency ⇒ Forward/Reverse Disable

This parameter **Enables/Disables** the **Forward Run** or **Reverse Run** mode.

If either direction is disabled, commands received for the disabled direction will not be recognized.

If both directions are disabled, the received direction command will determine the direction of the motor rotation.

Settings:

   0 — Off
   1 — Disable Reverse Run
   2 — Disable Forward Run

Direct Access Number —   F311

Parameter Type — **Selection List**

Factory Default — **Off**

Changeable During Run — **No**

Random Mode

Program ⇒ Protection ⇒ Retry/Restart

This parameter adjusts the carrier frequency randomly. This feature is effective in minimizing the negative effects of mechanical resonance.

Settings:

   0 — Disabled
   1 — Enabled

Direct Access Number —   F312

Parameter Type — **Selection List**

Factory Default — **Disabled**

Changeable During Run — **No**

Carrier Frequency Control Mode

Program ⇒ Special ⇒ Carrier Frequency

This parameter provides for the automatic decrease of the carrier frequency.

Select **1** to decrease the **Carrier Frequency** setting as a function of an increased current requirement.

Selection **2** or **3** may also include an output voltage drop as a function of an increased current requirement. The **Carrier Frequency** should be set below 4 kHz.

Settings:

   0 — No Decrease and No Limit
   1 — Valid Decrease and No Limit
   2 — No Decrease and Limit Small Pulse
   4 — Valid Decrease and Limit Small Pulse

Direct Access Number —   F316

Parameter Type — **Selection List**

Factory Default — **Valid Decrease and No Limit**

Changeable During Run — **Yes**

Synchronized Deceleration Time

Program ⇒ Protection ⇒ Under-Voltage/Ridethrough

In the event that the **Ridethrough** function activates in a multiple-motor application it will be necessary to manage the stopping motors synchronously as not to damage the product being processed (e.g., wire spools, bobbin winder for textile machines, etc.).

This parameter is used to minimize the product breakage during a momentary power outage. This function stops multiple machines simultaneously or makes them reach their respective command frequencies simultaneously by regulating their deceleration times.

See parameter F302 for more information on this setting.

Direct Access Number —   F317

Parameter Type — **Numerical**

Factory Default — **2.0**

Changeable During Run — **Yes**

Minimum — 0.1

Maximum — 6000.0

Units — Seconds

Synchronized Acceleration Time

Program ⇒ Protection ⇒ Under-Voltage/Ridethrough

In the event that the **Ridethrough** function activates in a multiple-motor application it will be necessary to manage the accelerating motors synchronously as not to damage the product being processed (e.g., wire spools, bobbin winder for textile machines, etc.).

This parameter is used to minimize the product breakage during a momentary power outage. This function orchestrates the acceleration of multiple machines simultaneously or makes them reach their respective command frequencies simultaneously by regulating their acceleration times.

See parameter F302 for more information on this setting.

Direct Access Number —   **F318**

Parameter Type — **Numerical**

Factory Default — **2.0**

Changeable During Run — **Yes**

Minimum — 0.10

Maximum — 6000

Units — Seconds

Drooping Gain

Program ⇒ Feedback ⇒ Drooping Control

This parameter sets the effective 100% output torque level while operating in the **Drooping Control** mode. This value is the upper torque limit of the motor being driven by a given ASD while operating in the **Drooping Control** mode.

Note: *The maximum frequency output is not limited by the setting of F011 while operating in the **Drooping Control** mode.*

Drooping

Drooping Control, also called **Load Share**, is used to share the load among two or more mechanically coupled motors. Unlike **Stall**, which reduces the output frequency in order to limit the load once the load reaches a preset level, **Drooping** can decrease or increase the V/f setting of a motor to maintain a balance between the output torque levels of mechanically coupled motors.

Because of variances in gearboxes, sheaves, belts, motors, and since the speed of the motor is constrained by the mechanical system, one motor may experience more load than its counterpart and may become overloaded. **Drooping Control** allows the overloaded motor to slow down, thus shedding load and encouraging a lightly-loaded motor to pick up the slack. The goal of **Drooping Control** is to have the same torque ratios for mechanically coupled motors.

Direct Access Number —   **F320**

Parameter Type — **Numerical**

Factory Default — **0.0**

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — 100.0

Units — %

Speed at 0% Drooping Gain

Program ⇒ Feedback ⇒ Drooping Control

This parameter sets the motor speed when at the 0% output torque gain while operating in the **Drooping Control** mode. This function determines the lowest speed that **Drooping** will be in effect for motors that share the same load.

Direct Access Number —   **F321**

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — 320.0

Units — Hz

Speed at F320 Drooping Gain

Program ⇒ Feedback ⇒ Drooping Control

This parameter sets the motor speed when at the 100% output torque gain while operating in the **Drooping Control** mode. This function determines the speed of the individual motors at the 100% **Drooping Gain** setting for motors that share the same load.

Direct Access Number —   **F322**

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — 320.0

Units — Hz

Drooping Insensitive Torque	Direct Access Number — **F323**
Program ⇒ Feedback ⇒ Drooping Control	Parameter Type — **Numerical**
	Factory Default — **10.00**
This parameter defines a torque range in which the **Drooping Control** settings will be ignored and the programmed torque settings will be followed.	Changeable During Run — **Yes**
	Minimum — 0.00
	Maximum — 100.0
	Units — %

Drooping Output Filter	Direct Access Number — **F324**
Program ⇒ Feedback ⇒ Drooping Control	Parameter Type — **Numerical**
	Factory Default — **100.0**
This parameter is used to set the rate of output change allowed when operating in the **Drooping Control** mode.	Changeable During Run — **Yes**
Jerky operation may be reduced by increasing this setting.	Minimum — 0.1
	Maximum — 200.0
	Units — Radians/Second

Light-Load High-Speed Operation	Direct Access Number — **F328**
Program ⇒ Special ⇒ Crane/Hoist Settings	Parameter Type — **Selection List**
	Factory Default — **Off**
This parameter enables the **Light-Load High-Speed** function by selecting an operating mode. The **Light-Load High-Speed** function accelerates the output frequency of the ASD from the programmed speed to the setting established in F330.	Changeable During Run — **Yes**

This parameter may be disabled.

Enabling the **Light-Load High-Speed** function requires that an operating mode be selected here, and that the criteria of parameters F331 – F333 be met.

Settings:

    0 — Off
    1 — Auto Speed (F-Motor: Up, R-Generator:Down)
    2 — Auto Speed (F-Generator: Down, R-Motor:Up)
    3 — F330 Setting (F-Motor: Up, R-Generator:Down)
    4 — F330 Setting (F-Generator: Down, R-Motor:Up)

Light-Load High-Speed Learning Function	Direct Access Number — **F329**
Program ⇒ Special ⇒ Crane/Hoist Settings	Parameter Type — **Selection List**
	Factory Default — **Off**
The **Light-Load High-Speed** function accelerates the output frequency of the ASD from the programmed speed to the setting established in F330 and is primarily used with **Crane/Hoist** functions.	Changeable During Run — **No**

During **Light-Load High-Speed** operation with this parameter enabled, parameters **Panel Torque Bias** (F343), **Creep Frequency** (F346), and the **Creep Time** (F347) are set to a standard set of light-load profile values. Application-specific adjustments may be required.

Note: *This function should be setup with a light load only.*

Settings:

    0 — Off
    1 — Forward/Reverse
    2 — Forward Only

Automatic Light-Load High-Speed Operation Frequency

Program ⇒ Special ⇒ Crane/Hoist Settings

This parameter establishes the speed to which the ASD will ramp when operating in the **Light-Load High-Speed** mode.

Direct Access Number — F330

Parameter Type — **Numerical**

Factory Default — **60.00**

Changeable During Run — **No**

Minimum — 30.00

Maximum — Upper-Limit (F012)

Units — Hz

Light-Load High-Speed Operation Switching Lower-Limit Frequency

Program ⇒ Special ⇒ Crane/Hoist Settings

This parameter sets an output frequency threshold that, once surpassed, allows the **Light-Load High-Speed** function to be used.

The **Light-Load High-Speed** function may be used if the frequency threshold set at this parameter and the following conditions are met:

1) **Light-Load High-Speed Operation Enable** is configured at F328.

2) The output torque is less than the setting established in F335 when reaching the frequency setting here.

Direct Access Number — F331

Parameter Type — **Numerical**

Factory Default — **40.00**

Changeable During Run — **Yes**

Minimum — 30.0

Maximum — Upper-Limit (F012)

Units — Hz

Light-Load High-Speed Operation Load Wait Time

Program ⇒ Special ⇒ Crane/Hoist Settings

This parameter determines the length of time that the load requirement must meet the **Light-Load High-Speed** criteria before the **Light-Load High-Speed Enable** (F328) is recognized.

Once recognized, the timer setting of F333 must expire to engage the Light-Load High-Speed function.

Direct Access Number — F332

Parameter Type — **Numerical**

Factory Default — **0.5**

Changeable During Run — **Yes**

Minimum — 0.0

Maximum — 10.0

Units — Seconds

Light-Load High-Speed Operation Detection Time

Program ⇒ Special ⇒ Crane/Hoist Settings

After the time setting of F332 times out, this parameter determines the length of time that the **Light-Load High-Speed** criteria must be met until the **Light-Load High-Speed** function engages.

Direct Access Number — F333

Parameter Type — **Numerical**

Factory Default — **1.0**

Changeable During Run — **Yes**

Minimum — 0.0

Maximum — 10.0

Units — Seconds

Light-Load High-Speed Operation Heavy-Load Detection Time

Program ⇒ Special ⇒ Crane/Hoist Settings

While operating in the **Light-Load High-Speed** mode, this parameter determines the length of time that a load exceeding the **Light-Load High-Speed** operation criteria may exist before the **Light-Load High-Speed** mode is terminated and normal operation resumes.

Direct Access Number — F334

Parameter Type — **Numerical**

Factory Default — **0.5**

Changeable During Run — **Yes**

Minimum — 0.0

Maximum — 10.0

Units — Seconds

Switching Load Torque During Power Running	Direct Access Number — **F335**
Program ⇒ Special ⇒ Crane/Hoist Settings	Parameter Type — **Numerical**
	Factory Default — **50.00**
During power running, this parameter establishes the threshold torque level that is used to determine if the **Light-Load High-Speed** (F328) operation may engage or remain engaged if active.	Changeable During Run — **No**
	Minimum — -250.00
	Maximum — +250.00
If the **Light-Load High-Speed** operation is terminated normal operation resumes.	Units — %

Note: *Power running may be during forward, reverse, acceleration, or deceleration, but not during regeneration.*

Heavy-Load Torque During Power Running	Direct Access Number — **F336**
Program ⇒ Special ⇒ Crane/Hoist Settings	Parameter Type — **Numerical**
	Factory Default — **100.00**
During power running, this parameter establishes the threshold torque level that is used to determine if the **Light-Load High-Speed** (F328) operation may engage or remain engaged if active.	Changeable During Run — **Yes**
	Minimum — -250.00
	Maximum — +250.00
If the **Light-Load High-Speed** operation is terminated normal operation resumes.	Units — %

Heavy-Load Torque During Constant Power Running	Direct Access Number — **F337**
Program ⇒ Special ⇒ Crane/Hoist Settings	Parameter Type — **Numerical**
	Factory Default — **50.00**
During constant power running, this parameter establishes the threshold torque level that is used to determine if the **Light-Load High-Speed** (F328) operation may engage or remain engaged if active.	Changeable During Run — **Yes**
	Minimum — -250.00
	Maximum — +250.00
If the **Light-Load High-Speed** operation is terminated normal operation resumes.	Units — %

Switching Load Torque During Regenerative Braking	Direct Access Number — **F338**
Program ⇒ Special ⇒ Crane/Hoist Settings	Parameter Type — **Numerical**
	Factory Default — **50.00**
During regenerative braking, this parameter establishes the threshold torque level that is used to determine if the **Light-Load High-Speed** (F328) operation may engage or remain engaged if active.	Changeable During Run — **Yes**
	Minimum — -250.00
	Maximum — +250.00
If the **Light-Load High-Speed** operation is terminated normal operation resumes.	Units — %

Braking Mode Selection	Direct Access Number — **F341**
Program ⇒ Torque ⇒ Torque Control	Parameter Type — **Selection List**
	Factory Default — **Disabled**
This parameter is primarily used with lifting systems to allow for enough torque to be produced after receiving a **Run** command before releasing the brake. Without this feature the load would drop for a period once the brake was released.	Changeable During Run — **Yes**

This parameter enables this function by setting the system operating mode.

Settings:

    0 — Disabled
    1 — Forward Direction
    2 — Reverse Direction
    3 — Same Direction

Torque Bias Input Selection

Program ⇒ Torque ⇒ Torque Control

Once enabled at parameter F341, this parameter sets the source of the input signal that will set the torque level used to provide the **Braking Mode Selection** function of parameter F341.

Settings:

    0 — Disabled
    1 — V/I
    2 — RR
    3 — RX
    4 — EOI (Keypad)
    5 — RS485 2-Wire
    6 — RS485 4-Wire
    7 — Communication Option Board
    8 — RX2 Option (AI1)

Direct Access Number —   F342
Parameter Type — **Selection List**
Factory Default — **Disabled**
Changeable During Run — **Yes**

Panel Torque Bias

Program ⇒ Torque ⇒ Torque Control

Once enabled at parameter F341, this parameter establishes the torque bias setting to which the setting of F342 will either add to or subtract from to produce the final torque value used to carry out the **Braking Mode Selection** function of parameter F341.

Direct Access Number —   F343
Parameter Type — **Numerical**
Factory Default — **100.00**
Changeable During Run — **Yes**
Minimum — -250.00
Maximum — +250.00
Units — %

Panel Torque Gain

Program ⇒ Torque ⇒ Torque Control

Once enabled at parameter F341, this parameter sets the sensitivity of the torque control source selected at F342 for the **Braking Mode Selection** function of parameter F341.

Direct Access Number —   F344
Parameter Type — **Numerical**
Factory Default — **100.00**
Changeable During Run — **Yes**
Minimum — 0.00
Maximum — 100.00
Units — %

Release Time

Program ⇒ Torque ⇒ Torque Control

Once enabled at parameter F341, this parameter sets the time that the brake will hold after the requirements of the **Braking Mode Selection** function of parameter F341 have been met.

Direct Access Number —   F345
Parameter Type — **Numerical**
Factory Default — **0.05**
Changeable During Run — **Yes**
Minimum — 0.00
Maximum — 2.50
Units — Seconds

Creeping Frequency

Program ⇒ Torque ⇒ Torque Control

Once enabled at parameter F341, and while running, upon receiving a **Stop** command this parameter sets an output frequency to be provided for the duration of the time setting of parameter F347.

Direct Access Number —   F346
Parameter Type — **Numerical**
Factory Default — **3.00**
Changeable During Run — **Yes**
Minimum — F240 Setting
Maximum — 20.0
Units — Hz

Creeping Time	**Direct Access Number — F347**

Creeping Time

Program ⇒ Torque ⇒ Torque Control

Once the **Creep** function of F346 is activated, this parameter determines the duration of activation of the **Creep** function.

Direct Access Number —   F347

Parameter Type — **Numerical**

Factory Default — **0.10**

Changeable During Run — **Yes**

Minimum — 0.0

Maximum — 2.50

Units — Seconds

Braking Time Learning Function

Program ⇒ Torque ⇒ Torque Control

This parameter is used to establish approximate settings for parameters F343, F345, F346, and F347.

Note: Setting this parameter should be done using a light load only.

Set this parameter to **Brake Signal Learning**. Provide a Run command. The aforementioned parameters will receive approximate values. Application-specific adjustments may be required when finished.

Settings:

> 0 — Disabled
> 1 — Enabled

Direct Access Number —   F348

Parameter Type — **Selection List**

Factory Default — **Disabled**

Changeable During Run — **Yes**

Accel/Decel Suspend

Program ⇒ Fundamental ⇒ Accel/Decel 1 Settings

To maintain a constant speed setting while running, this parameter may be used to suspend speed changes for a user-set length of time.

The **Accel/Decel Suspend** function is enabled by setting this parameter to either **Terminal Board Input** or to F350 – F353.

Selecting **Terminal Board Input** at this parameter requires that a discrete input terminal be set to **Dwell Signal** (see Table 5 on pg. 234 for a listing of available settings). Upon activation of the **Dwell Signal** terminal the output frequency remains at the at-activation speed for the duration of the activation. When deactivated the programmed accel or decel ramp resumes.

Selecting F350 – F353 at this parameter requires that the acceleration and/or the deceleration **Suspend Frequency** and **Suspend Time** settings be completed at F350, F351, F352, and F353. Upon reaching the frequency setting of F350 (Accel) or F352 (Decel), the Accel/Decel ramp will cease and the output frequency will hold at the threshold frequency setting for the time setting of F351 for acceleration or F353 for deceleration.

Settings:

> 0 — Off
> 1 — F350 – F353 Settings
> 2 — Terminal Board Input

Direct Access Number —   F349

Parameter Type — **Selection List**

Factory Default — **Off**

Changeable During Run — **Yes**

Acceleration Suspend Frequency	**Direct Access Number — F350**
Program ⇒ Fundamental ⇒ Accel/Decel 1 Settings	Parameter Type — **Numerical**
	Factory Default — **0.00**
When **Enabled** at F349, this parameter is used to set the frequency at which the **Acceleration Suspend** function will activate.	Changeable During Run — **Yes**
During acceleration, this parameter sets the frequency at which acceleration will stop and the motor will run at the setting of this parameter for the time setting of F351.	Minimum — 0.00
	Maximum — **Max. Freq.** (F011)
	Units — Hz
Acceleration Suspend Time	**Direct Access Number — F351**
Program ⇒ Fundamental ⇒ Accel/Decel 1 Settings	Parameter Type — **Numerical**
	Factory Default — **0.0**
When **Enabled** at F349, this parameter is used to set the duration of activation of the **Acceleration Suspend** function when initiated by reaching the **Acceleration Suspend Frequency** setting (F350).	Changeable During Run — **Yes**
	Minimum — 0.0
Once this parameter times out the acceleration rate will resume from the point of suspension.	Maximum — 10.0
	Units — Seconds
Deceleration Suspend Frequency	**Direct Access Number — F352**
Program ⇒ Fundamental ⇒ Accel/Decel 1 Settings	Parameter Type — **Numerical**
	Factory Default — **0.00**
When **Enabled** at F349, this parameter is used to set the frequency at which the **Deceleration Suspend** function will activate.	Changeable During Run — **Yes**
During deceleration, this parameter sets the frequency at which deceleration will stop and the motor will run at the setting of this parameter for the time setting of F353.	Minimum — 0.00
	Maximum — **Max. Freq.** (F011)
	Units — Hz
Deceleration Suspend Time	**Direct Access Number — F353**
Program ⇒ Fundamental ⇒ Accel/Decel 1 Settings	Parameter Type — **Numerical**
	Factory Default — **0.0**
When **Enabled** at F349, this parameter is used to set the duration of activation of the **Deceleration Suspend** function when initiated by reaching the **Deceleration Suspend Frequency** setting (F352).	Changeable During Run — **Yes**
	Minimum — 0.0
Once this parameter times out the deceleration rate will resume from the point of suspension.	Maximum — 10.0
	Units — Seconds

Commercial Power/ASD Output Switching

Program ⇒ Terminal ⇒ Line Power Switching

This parameter **Enables/Disables** the **Commercial Power/ASD Output Switching** function.

When enabled, the system may be set up to discontinue using the output of the drive and to switch to the commercial power in the event that 1) a trip is incurred, 2) a user-set frequency is reached, or 3) if initiated by a discrete input terminal.

Once set up with the proper switching frequency and hold times, the system will switch to commercial power upon reaching the F355 frequency criterion.

Switching may also be accomplished manually by activating the discrete input terminal **Commercial Power ASD Switching**. Terminal activation forces the ASD output speed to accelerate to the F355 switching frequency, resulting in the ASD-to-commercial power switching.

Deactivation of the discrete input terminal starts the hold-time counter setting (F356) for ASD-to-commercial power switching. Once timed out the motor resumes normal commercial power operation.

Settings:

    0 — Off
    1 — Switch at Signal Input and Trip
    2 — Switch at Signal Input with Switching Frequency
    3 — Switch at Signal Input and Trip with Switching Frequency

Switching Setup Requirements

    F354 — Enable the switching function.

    F355 — Set the switching frequency.

    F356 — (Speed) Hold -time before applying ASD output after the switching criteria has been met.

    F357 — (Speed) Hold -time before applying commercial power after the switching criteria has been met.

    F358 — (Speed) Hold -time of applying commercial power after the switching criteria has been met.

    Set a discrete input terminal to **Commercial Power ASD Switching**.

    Set **OUT1** and **OUT2** to **Commercial Power/ASD Switching 1** and **2**, respectively.

Note: *Ensure that the switching directions are the same and that F311 is set to **Permit All**.*

Note: *The **OUT1** and **OUT2** outputs assigned to **Commercial Power/ASD Switching Output** are used to actuate the re-routing contactors.*
Direct Access Number — F354

Parameter Type — **Selection List**

Factory Default — **Off**

Changeable During Run — **No**

Commercial Power/ASD Switching Frequency	**Direct Access Number — F355**
	Parameter Type — **Numerical**
Program ⇒ Terminal ⇒ Line Power Switching	Factory Default — **60.00**
When enabled at F354 and with a properly configured discrete output terminal, this parameter sets the frequency at which the **At Frequency Powerline Switching** function engages.	Changeable During Run — **Yes**
	Minimum — 0.00
The **At Frequency Powerline Switching** function commands the system to discontinue using the output of the drive and to switch to commercial power once reaching the frequency set here.	Maximum — **Max. Freq. (F011)**
	Units — Hz
See parameter F354 for more information on this setting.	

ASD Side-Switching Wait Time	**Direct Access Number — F356**
	Parameter Type — **Numerical**
Program ⇒ Terminal ⇒ Line Power Switching	Factory Default — **(ASD-Dependent)**
This parameter determines the amount of time that the drive will wait before outputting a signal to the motor once the switch-to-drive-output criteria has been met.	Changeable During Run — **Yes**
	Minimum — 0.10
	Maximum — 10.00
See parameter F354 for more information on this setting.	Units — Seconds

Commercial Power Switching Wait Time	**Direct Access Number — F357**
	Parameter Type — **Numerical**
Program ⇒ Terminal ⇒ Line Power Switching	Factory Default — **0.62**
This parameter determines the amount of time that the drive will wait before allowing commercial power to be applied to the motor once the switch-to-commercial-power criteria has been met.	Changeable During Run — **Yes**
	Minimum — **(ASD-Dependent)**
	Maximum — 10.00
See parameter F354 for more information on this setting.	Units — Seconds

Commercial Power Switching Freq. Hold Time	**Direct Access Number — F358**
	Parameter Type — **Numerical**
Program ⇒ Terminal ⇒ Line Power Switching	Factory Default — **2.00**
This parameter determines the amount of time that the connection to commercial power is maintained once the switch-to-drive-output criteria has been met.	Changeable During Run — **Yes**
	Minimum — 0.10
	Maximum — 10.00
See parameter F354 for more information on this setting.	Units — Seconds

PID Control Switching	**Direct Access Number — F359**
	Parameter Type — **Selection List**
Program ⇒ Feedback ⇒ Feedback Settings	Factory Default — **PID Off**
This parameter is used to set the PID control mode.	Changeable During Run — **No**

Selecting **Process PID** uses the upper and lower-limit settings of parameters F367 and F368.

Selecting **Speed PID** uses the upper and lower-limit settings of parameters F370 and F371.

Settings:

    0 — PID Off
    1 — Process PID
    2 — Speed PID
    3 — Easy Positioning PID (Not Used with the H9 ASD)

PID Feedback Signal

Program ⇒ Feedback ⇒ Feedback Settings

This parameter **Enables/Disables PID** feedback control. When enabled, this parameter determines the source of the motor control feedback.

Settings:

    0 — PID Control Disabled
    1 — V/I
    2 — RR
    3 — RX
    4 — RX2 Option (AI1)
    5 — Option V/I (AI2)
    6 — PG Feedback Option

Proportional-Integral-Derivative (PID) — A closed-loop control technique that seeks error minimization by reacting to three values: One that is proportional to the error, one that is representative of the error, and one that is representative of the rate of change of the error.

Direct Access Number —   F360

Parameter Type — **Selection List**

Factory Default — **PID Control Disabled**

Changeable During Run — **Yes**

PID Feedback Delay Filter

Program ⇒ Feedback ⇒ Feedback Settings

This parameter determines the delay in the ASD output response to the motor control feedback signal signal source is selected at F360).

Direct Access Number —   F361

Parameter Type — **Numerical**

Factory Default — **0.1**

Changeable During Run — **Yes**

Minimum — 0.0

Maximum — 25.0

PID Feedback Proportional (P) Gain

Program ⇒ Feedback ⇒ Feedback Settings

This parameter determines the degree that the **Proportional** function affects the output signal. The larger the value entered here, the quicker the drive responds to changes in feedback.

Direct Access Number —   F362

Parameter Type — **Numerical**

Factory Default — **0.10**

Changeable During Run — **Yes**

Minimum — 0.01

Maximum — 100.0

PID Feedback Integral (I) Gain

Program ⇒ Feedback ⇒ Feedback Settings

This parameter determines the degree that the **Integral** function affects the output signal. The smaller the value here, the more pronounced the effect of the integral function on the output signal.

Direct Access Number —   F363

Parameter Type — **Numerical**

Factory Default — **0.10**

Changeable During Run — **Yes**

Minimum — 0.01

Maximum — 100.00

PID Deviation Upper-Limit

Program ⇒ Feedback ⇒ Feedback Settings

This parameter determines the maximum amount that the feedback may increase the output signal.

Direct Access Number —   F364

Parameter Type — **Numerical**

Factory Default — **60.00**

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — 60.00

Units — Hz

PID Deviation Lower-Limit	**Direct Access Number — F365**
Program ⇒ Feedback ⇒ Feedback Settings	Parameter Type — **Numerical**
	Factory Default — **60.00**
This parameter determines the maximum amount that the feedback may decrease the output signal.	Changeable During Run — **Yes**
	Minimum — 0.00
	Maximum — 60.00
	Units — Hz

PID Feedback Differential (D) Gain	**Direct Access Number — F366**
Program ⇒ Feedback ⇒ Feedback Settings	Parameter Type — **Numerical**
	Factory Default — **0.00**
This parameter determines the degree that the **Differential** function affects the output signal. The larger the value entered here, the more pronounced the affect of the differential function for a given feedback signal level.	Changeable During Run — **Yes**
	Minimum — 0.00
	Maximum — 2.55

Process Upper-Limit	**Direct Access Number — F367**
Program ⇒ Feedback ⇒ Feedback Settings	Parameter Type — **Numerical**
	Factory Default — **60.00**
Selecting **Process PID** at parameter F359 allows for this parameter setting to function as the **Upper-Limit** while operating in the **PID Control** mode.	Changeable During Run — **No**
	Minimum — **Lower-Limit** (F013)
	Maximum — **Upper-Limit** (F012)
	Units — Hz

Process Lower-Limit	**Direct Access Number — F368**
Program ⇒ Feedback ⇒ Feedback Settings	Parameter Type — **Numerical**
	Factory Default — **0.00**
Selecting **Process PID** at parameter F359 allows for this parameter setting to function as the **Lower-Limit** while operating in the **PID Control** mode.	Changeable During Run — **No**
	Minimum — **Lower-Limit** (F013)
	Maximum — **Upper-Limit** (F012)
	Units — Hz

PID Control Wait Time	**Direct Access Number — F369**
Program ⇒ Feedback ⇒ Feedback Settings	Parameter Type — **Numerical**
	Factory Default — **0**
This parameter is used to delay the start of PID control at start up. During the wait time set here, the ASD will follow the frequency control input of the process value and the feedback input will be ignored until this setting times out. At which time the PID setup assumes control.	Changeable During Run — **Yes**
	Minimum — 0
	Maximum — 2400
	Units — Seconds

PID Output Upper-Limit	**Direct Access Number — F370**
Program ⇒ Feedback ⇒ Feedback Settings	Parameter Type — **Numerical**
	Factory Default — **60.00**
Selecting **Speed PID** at parameter F359 allows for this parameter setting to function as the **Upper-Limit** while operating in the **PID Control** mode.	Changeable During Run — **No**
	Minimum — **Lower-Limit** (F013)
	Maximum — **Upper-Limit** (F012)
	Units — Hz

PID Output Lower-Limit

Program ⇒ Feedback ⇒ Feedback Settings

Selecting **Speed PID** at parameter F359 allows for this parameter setting to function as the **Lower-Limit** while operating in the **PID Control** mode.

Direct Access Number — F371

Parameter Type — **Numerical**

Factory Default — **4.00**

Changeable During Run — **Yes**

Minimum — **Lower-Limit** (F013)

Maximum — **Upper-Limit** (F012)

Units — Hz

Process Increasing Rate

Program ⇒ Feedback ⇒ Feedback Settings

This parameter is used to limit the rate that the output of the ASD may increase for a given difference in the speed reference and the PID feedback value.

Direct Access Number — F372

Parameter Type — **Numerical**

Factory Default — **10.0**

Changeable During Run — **Yes**

Minimum — 0.1

Maximum — 600.0

Units — Seconds

Process Decreasing Rate

Program ⇒ Feedback ⇒ Feedback Settings

This parameter is used to limit the rate that the output of the ASD may decrease for a given difference in the speed reference and the PID feedback value.

Direct Access Number — F373

Parameter Type — **Numerical**

Factory Default — **10.0**

Changeable During Run — **Yes**

Minimum — 0.1

Maximum — 600.0

Units — Seconds

Number of PG Input Pulses

Program ⇒ Feedback ⇒ PG Settings

This parameter is used to set the number of pulses output from a shaft-mounted encoder that is used to indicate one revolution of rotation (360°) of the motor or of the motor-driven equipment.

Direct Access Number — F375

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

Changeable During Run — **No**

Minimum — 12

Maximum — 9999

Number of PG Input Phases

Program ⇒ Feedback ⇒ PG Settings

This parameter determines the type of information that is supplied by the phase encoder.

Settings:

    1 — Single Phase
    2 — Two Phase

Direct Access Number — F376

Parameter Type — **Selection List**

Factory Default — **(ASD-Dependent)**

Changeable During Run — **Yes**

| **PG Disconnection Detection** | **Direct Access Number — F377** |

Program ⇒ Feedback ⇒ PG Settings

This parameter **Enables/Disables** the system's monitoring of the PG connection status when using encoders with line driver outputs.

Note: *The PG Vector Feedback Board option is required to use this feature.*

Settings:

   0 — Disabled
   1 — Enabled with Filter
   3 — Enabled (Detect momentary power fail)

Direct Access Number — F377
Parameter Type — **Selection List**
Factory Default — **(ASD-Dependent)**
Changeable During Run — **Yes**

Simple Positioning Completion Range

Program ⇒ Feedback ⇒ PG Settings

While operating in the **Positioning Control** mode, this parameter sets the range of accuracy for a **Stop** command initiated via the terminal board.

If the setting is too low the stop may be too abrupt.

Direct Access Number — F381
Parameter Type — **Numerical**
Factory Default — **100**
Changeable During Run — **Yes**
Minimum — 1
Maximum — 4000

Autotuning 1

Program ⇒ Motor ⇒ Vector Motor Model

This parameter sets the **Autotune** command status.

Selecting **Reset Motor Defaults** for this parameter sets parameters F410, F411, F412, and F413 to the factory default settings.

If selecting **Autotune on Run Command**, **Autotune Initiated by Input Terminal**, or **Autotune of Detail Parameters** for this parameter set the **Base Frequency**, **Base Frequency Voltage**, and the **Motor Rated Revolutions** to the nameplated values of the motor to achieve the best possible **Autotune** precision.

Settings:

   0 — Autotune Disabled
   1 — Reset Motor Defaults
   2 — Enable Autotune on Run Command
   3 — Autotuning by Input Terminal Signal (see Table 5 on pg. 234)
   4 — Motor Constant Auto Calculation

Direct Access Number — F400
Parameter Type — **Selection List**
Factory Default — **Autotune Disabled**
Changeable During Run — **No**

Slip Frequency Gain

Program ⇒ Motor ⇒ Vector Motor Model

This parameter provides a degree of slip compensation for a given load. A higher setting here decreases the slip allowed for a given load/ASD output ratio.

Direct Access Number — F401
Parameter Type — **Numerical**
Factory Default — **70**
Changeable During Run — **Yes**
Minimum — 0
Maximum — 150
Units — %

Autotuning 2	Direct Access Number — **F402**
Program ⇒ Motor ⇒ Vector Motor Model	Parameter Type — **Selection List**
	Factory Default — **Off**
This parameter introduces a thermal element into the autotuning equation and is used to automatically adjust the **Autotune** parameter values as a function of increases in the temperature of the motor.	Changeable During Run — **No**
Settings:	

0 — Off
   1 — Self-Cooled Motor Tuning
   2 — Forced Air Cooled Motor Tuning	

Motor Rated Capacity	Direct Access Number — **F405**
Program ⇒ Motor ⇒ Vector Motor Model	Parameter Type — **Numerical**
	Factory Default — **11.0**
This parameter is used to set the (nameplated) rated capacity of the motor being used.	Changeable During Run — **Yes**
	Minimum — 0.1
	Maximum — 500.00
	Units — kW
Motor Rated Current	Direct Access Number — **F406**
Program ⇒ Motor ⇒ Vector Motor Model	Parameter Type — **Numerical**
	Factory Default — **20.3**
This parameter is used to set the (nameplated) current rating of the motor being used.	Changeable During Run — **Yes**
	Minimum — 0.1
	Maximum — 2000.0
	Units — Amps
Motor Rated RPM	Direct Access Number — **F407**
Program ⇒ Motor ⇒ Vector Motor Model	Parameter Type — **Numerical**
	Factory Default — **1730**
This parameter is used input the (nameplated) rated speed of the motor.	Changeable During Run — **Yes**
	Minimum — 100
	Maximum — 60000
	Units — RPM
Base Frequency Voltage 1	Direct Access Number — **F409**
Program ⇒ Vector ⇒ Vector Motor Model	Parameter Type — **Numerical**
	Factory Default — **(ASD-Dependent)**
The **Motor 1 Base Frequency Voltage 1** is the **Motor 1** output voltage at the **Base Frequency** (F014). Regardless of the programmed value, the output voltage cannot be higher than the input voltage.	Changeable During Run — **Yes**
	Minimum — 50.0
The actual output voltage will be influenced by the input voltage of the ASD and the **Supply Voltage Correction** setting (F307).	Maximum — 660.0
	Units — Volts

Motor Constant 1 (Torque Boost)	**Direct Access Number —** **F410**

Program $\Rightarrow$ Motor $\Rightarrow$ Vector Motor Model

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

This parameter sets the primary resistance of the motor. Increasing this value can prevent a drop in the torque of the motor at low speeds. Increasing this value excessively can result in nuisance overload tripping.

Changeable During Run — **Yes**

Minimum — 0.0

Maximum — 30.0

Units — %

Motor Constant 2 (No-Load Current)	**Direct Access Number —** **F411**

Program $\Rightarrow$ Motor $\Rightarrow$ Vector Motor Model

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

This parameter is used to set the current level required to excite the motor. Specifying a value that is too high for this parameter may result in hunting (erratic motor operation).

Changeable During Run — **No**

Minimum — 10

Maximum — 90

Units — %

Motor Constant 3 (Leak Inductance)	**Direct Access Number —** **F412**

Program $\Rightarrow$ Motor $\Rightarrow$ Vector Motor Model

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

This parameter is used to set the leakage inductance of the motor.

A larger setting here results in higher output torque at high speeds.

Changeable During Run — **Yes**

Minimum — 0

Maximum — 200

Units — %

Motor Constant 4 (Rated Slip)	**Direct Access Number —** **F413**

Program $\Rightarrow$ Motor $\Rightarrow$ Vector Motor Model

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

This parameter is used to set the secondary resistance of the motor.

An increase in this parameter setting results in an increase of compensation for motor slip.

Changeable During Run — **Yes**

Minimum — 0.01

Minimum — 25.00

Units — %

Exciting Strengthening Coefficient	**Direct Access Number —** **F415**

Program $\Rightarrow$ Special $\Rightarrow$ Special Parameters

Parameter Type — **Numerical**

Factory Default — **100**

This parameter is used to increase the magnetic flux of the motor at low-speed. This feature is useful when increased torque at low speeds is required.

Changeable During Run — **Yes**

Minimum — 100

Maximum — 130

Units — %

Stall Prevention Factor 1

Program ⇒ Protection ⇒ Stall

This parameter is to be adjusted in the event that the motor stalls when operated above the base frequency.

If a momentary heavy load occurs the motor may stall before the load current reaches the stall prevention level setting of F601.

A drop in the supply voltage may cause fluctuations of the load current or may cause motor vibration. A gradual adjustment of this parameter may alleviate this condition.

Start with a setting of 85 at these parameters and gradually adjust them from there one at a time until the desired results are produced.

Adjustments to this parameter may increase the load current of the motor and subsequently warrant an adjustment at the **Motor Overload Protection Level** setting.

Direct Access Number —   F416

Parameter Type — **Numerical**

Factory Default — **100**

Changeable During Run — **No**

Minimum — 10

Maximum — 250

Torque Command Selection

Program ⇒ Torque ⇒ Torque Control

When operating in the **Torque Control** mode, this parameter allows the user to select the source of the torque command signal.

Settings:

    1 — V/I
    2 — RR
    3 — RX
    4 — EOI (Keypad) (F725 Setting)
    5 — RS485 2-Wire
    6 — RS485 4-Wire
    7 — Communication Option Board
    8 — RX2 Option (AI1)

Direct Access Number —   F420

Parameter Type — **Selection List**

Factory Default — **RX**

Changeable During Run — **Yes**

Tension Torque Bias Input

Program ⇒ Torque ⇒ Torque Control

This parameter **Enables/Disables** the **Tension Torque Bias** input function.

This feature is enabled by selecting a **Tension Torque Bias** input signal source.

Settings:

    0 — Disabled
    1 — V/I
    2 — RR
    3 — RX
    4 — EOI (Keypad)
    5 — RS485 2-Wire
    6 — RS485 4-Wire
    7 — Communication Option Board
    8 — RX2 Option (AI1)

Direct Access Number —   F423

Parameter Type — **Selection List**

Factory Default — **Disabled**

Changeable During Run — **Yes**

Load Sharing Gain Input

Program ⇒ Torque ⇒ Torque Control

This parameter **Enables/Disables** the **Load Sharing Gain** input function.

This feature is enabled by selecting a **Load Sharing Gain** input signal source.

Settings:

    0 — Disabled
    1 — V/I
    2 — RR
    3 — RX
    4 — EOI (Keypad)
    5 — RS485 2-Wire
    6 — RS485 4-Wire
    7 — Communication Option Board
    8 — RX2 Option (AI1)

Direct Access Number —   F424

Parameter Type — **Selection List**

Factory Default — **Disabled**

Changeable During Run — **Yes**

Forward Speed Limit Input

Program ⇒ Torque ⇒ Torque Speed Limiting

This parameter **Enables/Disables** the **Forward Speed Limit Input** control function. When enabled and operating in the **Torque Control** mode, the forward speed limit is controlled by the input selected here.

If **Setting** is selected, the value set at F426 is used as the **Forward Speed Limit** input.

Settings:

    0 — Disabled
    1 — V/I
    2 — RR
    3 — RX
    4 — F426 (Setting)

Direct Access Number —   F425

Parameter Type — **Selection List**

Factory Default — **Disabled**

Changeable During Run — **Yes**

Forward Speed Limit Level

Program ⇒ Torque ⇒ Torque Control

This parameter provides a value to be used as the **Forward Speed Limit** setting if F426 is selected at F425.

Direct Access Number —   F426

Parameter Type — **Numerical**

Factory Default — **80.0**

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — **Upper-Limit** (F012)

Units — Hz

Reverse Speed Limit Input

Program ⇒ Torque ⇒ Torque Control

This parameter **Enables/Disables** the **Reverse Speed Limit Input** control function. When enabled and operating in the **Torque Control** mode, the reverse speed limit is controlled by the terminal selected here. If **Setting** is selected, the value set at F428 is used as the **Reverse Speed Limit** input.

Settings:

    0 — Disabled
    1 — V/I
    2 — RR
    3 — RX
    4 — Setting (F428)

Direct Access Number —   **F427**
Parameter Type — **Selection List**
Factory Default — **Disabled**
Changeable During Run — **Yes**

Reverse Speed Limit Input Level

Program ⇒ Torque ⇒ Torque Control

This parameter provides a value to be used as the **Reverse Speed Limit** setting if **Setting** is selected at F427.

Direct Access Number —   **F428**
Parameter Type — **Numerical**
Factory Default — **80.0**
Changeable During Run — **Yes**
Minimum — 0.00
Maximum — **Upper-Limit** (F012)
Units — Hz

Speed Limit (torque=0) Center Value Reference

Program ⇒ Torque ⇒ Torque Speed Limiting

The system has the ability to limit the amount that the speed may vary as a function of a changing load while operating in the **Torque Control** mode. This parameter sets the input terminal that will be used to control the allowable speed variance.

Settings:

    0 — Disabled
    1 — V/I
    2 — RR
    3 — RX
    4 — F431 Setting

Direct Access Number —   **F430**
Parameter Type — **Selection List**
Factory Default — **Disabled**
Changeable During Run — **Yes**

Speed Limit (torque=0) Center Value

Program ⇒ Torque ⇒ Torque Speed Limiting

The system has the ability to limit the amount that the speed may vary as a function of a changing load while operating in the **Torque Control** mode. This parameter sets the targeted speed. The plus-or-minus value (range) for this setting may be set at F432.

Direct Access Number —   **F431**
Parameter Type — **Numerical**
Factory Default — **0.00**
Changeable During Run — **Yes**
Minimum — 0.00
Maximum — **Max. Freq.** (F011)
Units — Hz

Speed Limit (torque=0) Band

Program ⇒ Torque ⇒ Torque Speed Limiting

The system has the ability to limit the amount that the speed may vary as a function of a changing load while operating in the **Torque Control** mode. This parameter sets a plus-or-minus value (range) for the **Speed Limit Torque Level** (F431).

Direct Access Number —   F432

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — **Max. Freq.** (F011)

Units — Hz

Rotation in Specified Direction ONLY

Program ⇒ Torque ⇒ Torque Speed Limiting

This parameter **Enables/Disables** the **Forward Run** or **Reverse Run** mode.

If either direction is disabled, commands received for the disabled direction will not be recognized.

If both directions are disabled, the received direction command will determine the direction of the motor rotation.

Settings

   0 — Disabled
   1 — Enabled

Direct Access Number —   F435

Parameter Type — **Selection List**

Factory Default — **Disabled**

Changeable During Run — **No**

Power Running Torque Limit 1

Program ⇒ Torque ⇒ Torque Limit Settings

This parameter determines the source of the control signal for the positive torque limit setting.

If **Setting** is selected, the value set at F441 is used as the **Power Running Torque Limit 1** input.

Settings:

   1 — V/I
   2 — RR
   3 — RX
   4 — F441 (Setting)

Direct Access Number —   F440

Parameter Type — **Selection List**

Factory Default —**F441 Setting**

Changeable During Run — **Yes**

Power Running Torque Limit 1 Level

Program ⇒ Torque ⇒ Torque Limit Settings

This parameter provides a value for the **Power Running Torque Limit 1** setting if F441 is selected at parameter F440.

This value provides the positive torque upper-limit for the 1 motor.

Direct Access Number —   F441

Parameter Type — **Numerical**

Factory Default — **250.0 (Disabled)**

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — 250.0 (Disabled)

Units — %

Regenerative Braking Torque Limit 1

Program ⇒ Torque ⇒ Torque Limit Settings

This parameter determines the source of the **Regenerative Torque Limit** control signal.

If **Setting** is selected, the value set at F443 is used for this parameter.

Settings:
    1 — V/I
    2 — RR
    3 — RX
    4 — F443 (Setting)

Direct Access Number —	**F442**
Parameter Type —	**Selection List**
Factory Default —	F443 **Setting**
Changeable During Run —	**Yes**

Regenerative Braking Torque Limit 1 Level

Program ⇒ Torque ⇒ Torque Limit Settings

This parameter provides a value to be used as the **Regeneration Torque Limit 1** if F443 is selected at parameter F442.

Set this parameter to **250%** to disable this function.

Direct Access Number —	**F443**
Parameter Type —	**Numerical**
Factory Default —	**250.0 (Disabled)**
Changeable During Run —	**Yes**
Minimum —	0.00
Maximum —	249.9
Units —	%

Power Running Torque Limit 2 Level

Program ⇒ Torque ⇒ Manual Torque Limit Settings

This parameter is used to set the positive torque upper-limit for the 2 motor profile when multiple motors are controlled by a single drive or when a single motor is to be controlled by multiple profiles.

Direct Access Number —	**F444**
Parameter Type —	**Numerical**
Factory Default —	**250.0 (Disabled)**
Changeable During Run —	**Yes**
Minimum —	0.00
Maximum —	250.0 (Disabled)
Units —	%

Regenerative Braking Torque Limit 2 Level

Program ⇒ Torque ⇒ Manual Torque Limit Settings

This parameter is used to set the negative torque upper-limit for the 2 motor profile when multiple motors are controlled by a single drive or when a single motor is to be controlled by multiple profiles.

Direct Access Number —	**F445**
Parameter Type —	**Numerical**
Factory Default —	**250.0 (Disabled)**
Changeable During Run —	**Yes**
Minimum —	0.00
Maximum —	250.0 (Disabled)
Units —	%

Power Running Torque Limit 3 Level

Program ⇒ Torque ⇒ Manual Torque Limit Settings

This parameter is used to set the positive torque upper-limit for the 3 motor profile when multiple motors are controlled by a single drive or when a single motor is to be controlled by multiple profiles.

Direct Access Number —	**F446**
Parameter Type —	**Numerical**
Factory Default —	**250.0 (Disabled)**
Changeable During Run —	**Yes**
Minimum —	0.00
Maximum —	250.0 (Disabled)
Units —	%

Regenerative Braking Torque Limit 3 Level Program ⇒ Torque ⇒ Manual Torque Limit Settings This parameter is used to set the negative torque upper-limit for the 3 motor profile when multiple motors are controlled by a single drive or when a single motor is to be controlled by multiple profiles.	**Direct Access Number — F447** Parameter Type — **Numerical** Factory Default — **250.0 (Disabled)** Changeable During Run — **Yes** Minimum — 0.00 Maximum — 250.0 (Disabled) Units — %
Power Running Torque Limit 4 Level Program ⇒ Torque ⇒ Manual Torque Limit Settings This parameter is used to set the positive torque upper-limit for the 4 motor profile when multiple motors are controlled by a single drive or when a single motor is to be controlled by multiple profiles.	**Direct Access Number — F448** Parameter Type — **Numerical** Factory Default — **250.0 (Disabled)** Changeable During Run — **Yes** Minimum — 0.00 Maximum — 250.0 (Disabled) Units — %
Regenerative Braking Torque Limit 4 Level Program ⇒ Torque ⇒ Manual Torque Limit Settings This parameter is used to set the negative torque upper-limit for the 4 motor profile when multiple motors are controlled by a single drive or when a single motor is to be controlled by multiple profiles.	**Direct Access Number — F449** Parameter Type — **Numerical** Factory Default — **250.0 (Disabled)** Changeable During Run — **Yes** Minimum — 0.00 Maximum — 250.0 (Disabled) Units — %

Accel/Decel Operation After Torque Limit
 	
Program ⇒ Torque ⇒ Torque Limit Settings
 	
In a Crane/Hoist application that is operating using a mechanical brake, this parameter is used to minimize the delay between the brake release and the output torque reaching a level that can sustain the load.
 	
This setting may reference time or the operating speed of the motor.
 	
Settings:
    0 — In Sync with Accel/Decel
    1 — In Sync with Minimum Time
	Direct Access Number — F451
	Parameter Type — **Selection List**
	Factory Default — **In Sync with Accel/ Decel**
	Changeable During Run — **Yes**

Power Running Stall Continuous Trip Detection Time Program ⇒ Protection ⇒ Stall This parameter is used to extend the **Over-Voltage Stall** (F305) and the **Over-Current Stall** (F017) time settings.	**Direct Access Number — F452** Parameter Type — **Numerical** Factory Default — **0.0** Changeable During Run — **Yes** Minimum — 0.0 Maximum — 1.0 Units — Seconds

Stall Prevention During Regeneration	Direct Access Number — **F453**

Program ⇒ Protection ⇒ Stall

This function of this parameter is to disable the **Over-Voltage Stall** (F305) and the **Over-Current Stall** (F017) function during regeneration <u>only</u>.

Application-specific conditions may occur that warrant disabling the **Stall** function during regeneration.

Settings:

   0 — Disabled (Stall During Regenerative Braking)
   1 — Enabled (No Stall During Regenerative Braking)

Parameter Type — **Selection List**
Factory Default — **Enabled**
Changeable During Run — **Yes**

Current Control Proportional Gain	Direct Access Number — **F458**

Program ⇒ Feedback ⇒ PG Settings

This parameter sets the sensitivity of the drive when monitoring the output current to control speed.

The larger the value entered here, the more sensitive the drive is to changes in the received feedback.

Parameter Type — **Numerical**
Factory Default — **(ASD-Dependent)**
Changeable During Run — **No**
Minimum — 0.0
Maximum — 100.0

Speed Loop Proportional Gain	Direct Access Number — **F460**

Program ⇒ Feedback ⇒ PG Settings

During closed-loop operation, this parameter sets the response sensitivity of the drive when monitoring the output speed for control.

The larger the value entered here, the larger the change in the output speed for a given received feedback signal.

Parameter Type — **Numerical**
Factory Default — **(ASD-Dependent)**
Changeable During Run — **No**
Minimum — 1
Maximum — 9999

Speed Loop Stabilization Coefficient	Direct Access Number — **F461**

Program ⇒ Feedback ⇒ PG Settings

During closed-loop operation, this parameter sets the response sensitivity of the drive when monitoring the output speed for control.

The larger the value entered here, the quicker the response to changes in the received feedback.

Parameter Type — **Numerical**
Factory Default — **100**
Changeable During Run — **Yes**
Minimum — 1
Maximum — 9999

Load Moment of Inertia 1	Direct Access Number — **F462**

Program ⇒ Feedback ⇒ PG Setting**s**

This parameter is used for calculating accel/decel torque when compensating for load inertia while operating in the **Drooping Control** mode.

Parameter Type — **Numerical**
Factory Default — **35**
Changeable During Run — **Yes**
Minimum — 0
Maximum — 100

Second Speed Loop Proportional Gain	Direct Access Number — **F463**

Program ⇒ Feedback ⇒ PG Settings

During closed-loop operation, this parameter sets the sensitivity of the drive when monitoring the output speed for control.

The larger the value entered here, the more sensitive the drive is to changes in the received feedback.

Parameter Type — **Numerical**
Factory Default — **(ASD-Dependent)**
Changeable During Run — **No**
Minimum — 1
Maximum — 9999

Second Speed Loop Stabilization Coefficient

Program ⇒ Feedback ⇒ PG Settings

During closed-loop operation, this parameter sets the response sensitivity of the drive when monitoring the output speed for control.

The larger the value entered here, the quicker the response to changes in the received feedback.

Direct Access Number — F464

Parameter Type — **Numerical**

Factory Default — **1**

Changeable During Run — **Yes**

Minimum — 1

Maximum — 9999

Load Moment of Inertia 2

Program ⇒ Feedback ⇒ PG Settings

This parameter is used for calculating accel/decel torque when compensating for load inertia while operating in the **Drooping Control** mode.

Direct Access Number — F465

Parameter Type — **Numerical**

Factory Default — **35**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 100

Speed PID Switching Frequency

Program ⇒ Feedback ⇒ Feedback Settings

While running, this parameter establishes the threshold speed setting that is used to determine if PID control may engage or remain engaged if active.

Direct Access Number — F466

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — **Max. Freq. (F011)**

Units — Hz

V/I Input Bias

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to fine-tune the bias of the **V/I** input terminals.

Note: *See note on pg. 44 for more information on the V/I terminal.*

This setting may be used to ensure that the zero level of the input source (pot, pressure transducer, flow meter, etc.) is also the zero level setting of the ASD system.

This is accomplished by setting the input source to zero and adjusting this setting to provide an output of zero from the ASD.

Direct Access Number — F470

Parameter Type — **Numerical**

Factory Default — **127**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 255

V/I Input Gain

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to fine tune the gain of the **V/I** input terminals.

Note: *See note on pg. 44 for more information on the V/I terminal.*

This setting may be used to ensure that the 100% level of the input source (pot, pressure transducer, flow meter, etc.) is also the 100% level setting of the ASD system.

This is accomplished by setting the input source to 100% and adjusting this setting to provide an output of 100% from the ASD.

Direct Access Number — F471

Parameter Type — **Numerical**

Factory Default — **129**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 255

RR Input Bias

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to fine tune the bias of the **RR** input terminal when this terminal is used as the control input while operating in the **Speed Control** mode or the **Torque Control** mode.

This setting may be used to ensure that the zero level of the input source (pot, pressure transducer, flow meter, etc.) is also the zero level setting of the ASD system.

This is accomplished by setting the input source to zero and adjusting this setting to provide an output of zero from the ASD.

Direct Access Number — F472

Parameter Type — **Numerical**

Factory Default — **128**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 255

RR Input Gain

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to fine tune the gain of the **RR** input terminal when this terminal is used as the control input while operating in the **Speed Control** mode or the **Torque Control** mode.

This setting may be used to ensure that the 100% level of the input source (pot, pressure transducer, flow meter, etc.) is also the 100% level setting of the ASD system.

This is accomplished by setting the input source to 100% and adjusting this setting to provide an output of 100% from the ASD.

Direct Access Number — F473

Parameter Type — **Numerical**

Factory Default — **154**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 255

RX Input Bias

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to fine tune the bias of the **RX** input terminal when this terminal is used as the control input while operating in the **Speed Control** mode or the **Torque Control** mode.

This setting may be used to ensure that the zero level of the input source (pot, pressure transducer, flow meter, etc.) is also the zero level setting of the ASD system.

This is accomplished by setting the input source to zero and adjusting this setting to provide an output of zero from the ASD.

Direct Access Number — F474

Parameter Type — **Numerical**

Factory Default — **127**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 255

RX Input Gain

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to fine tune the gain of the **RX** input terminal when this terminal is used as the control input while operating in the **Speed Control** mode or the **Torque Control** mode.

This setting may be used to ensure that the 100% level of the input source (pot, pressure transducer, flow meter, etc.) is also the 100% level setting of the ASD system.

This is accomplished by setting the input source to 100% and adjusting this setting to provide an output of 100% from the ASD.

Direct Access Number — F475

Parameter Type — **Numerical**

Factory Default — **127**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 255

RX2 (AI1) Input Bias

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to fine tune the bias of the **RX2** (AI1) input terminal when this terminal is used as the control input while operating in the **Speed Control** mode or the **Torque Control** mode.

This setting may be used to ensure that the zero level of the input source (pot, pressure transducer, flow meter, etc.) is also the zero level setting of the ASD system.

This is accomplished by setting the input source to zero and adjusting this setting to provide a zero output from the ASD.

Direct Access Number —   F476

Parameter Type — **Numerical**

Factory Default — **128**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 255

RX2 (AI1) Input Gain

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to fine tune the gain of the **RX2** (AI1) input terminal when this terminal is used as the control input while operating in the **Speed Control** mode or the **Torque Control** mode.

This setting may be used to ensure that the 100% level of the input source (pot, pressure transducer, flow meter, etc.) is also the 100% level setting of the ASD system.

This is accomplished by setting the input source to 100% and adjusting this setting to provide an output of 100% from the ASD.

Direct Access Number —   F477

Parameter Type — **Numerical**

Factory Default — **128**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 255

AI2 (Option V/I) Input Bias

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to fine tune the gain of the **Optional AI2** input terminal when this terminal is used as the control input while operating in the **Speed Control** mode or the **Torque Control** mode.

This setting may be used to ensure that the 100% level of the input source (pot, pressure transducer, flow meter, etc.) is also the 100% level setting of the ASD system.

This is accomplished by setting the input source to 100% and adjusting this setting to provide an output of 100% from the ASD.

Direct Access Number —   F478

Parameter Type — **Numerical**

Factory Default — **128**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 255

AI2 (Option V/I) Input Gain

Program ⇒ Frequency ⇒ Speed Reference Setpoints

This parameter is used to fine tune the gain of the **Optional AI2** input terminal when this terminal is used as the control input while operating in the **Speed Control** mode or the **Torque Control** mode.

This setting may be used to ensure that the 100% level of the input source (pot, pressure transducer, flow meter, etc.) is also the 100% level setting of the ASD system.

This is accomplished by setting the input source to 100% and adjusting this setting to provide an output of 100% from the ASD.

Direct Access Number —   F479

Parameter Type — **Numerical**

Factory Default — **128**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 255

Permanent Magnet (PM) Motor Constant 1

Program ⇒ Motor ⇒ PM Motor

This parameter is used with synchronous motor applications only.

Contact the TIC Customer Support Center for information on this parameter.

Direct Access Number —   F498

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 100

Units — %

Permanent Magnet (PM) Motor Constant 2

Program ⇒ Motor ⇒ PM Motor

This parameter is used with synchronous motor applications only.

Contact the TIC Customer Support Center for information on this parameter.

Direct Access Number —   F499

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 100

Units — %

Acceleration Time 2

Program ⇒ Special ⇒ Acc/Dec 1 – 4 Settings

This parameter specifies the time in seconds for the output of the ASD to go from 0.0 Hz to the **Maximum Frequency** for the **2 Acceleration** profile. The Accel/Decel pattern may be set using F502. The minimum Accel/Decel time may be set using F508.

This setting is also used to determine the acceleration rate of the **UP/DOWN Frequency Functions**.

Note: *An acceleration time shorter than the load will allow may cause nuisance tripping and mechanical stress to loads. **Automatic Accel/Decel**, **Stall**, and **Ridethrough** settings may lengthen the acceleration times.*

Direct Access Number —   F500

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

Changeable During Run — **Yes**

Minimum — 0.1

Maximum — 6000.0

Units — Seconds

Deceleration Time 2

Program ⇒ Fundamental ⇒ Accel/Decel 1 Settings

This parameter specifies the time in seconds for the output of the ASD to go from the **Maximum Frequency** to 0.0 Hz for the **2 Deceleration** profile. The Accel/Decel pattern may be set using F502. The minimum Accel/Decel time may be set using F508.

This setting is also used to determine the deceleration rate of the **UP/DOWN Frequency Functions**.

Note: *A deceleration time shorter than the load will allow may cause nuisance tripping and mechanical stress to loads. **Automatic Accel/Decel**, **Stall**, and **Ridethrough** settings may lengthen the deceleration times.*

Direct Access Number —   F501

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

Changeable During Run — **Yes**

Minimum — 0.1

Maximum — 6000

Units — Seconds

Acc/Dec Pattern 1

Program ⇒ Special ⇒ Accel/Decel 1 – 4 Settings

This parameter enables a user-selected preprogrammed output profile that controls the acceleration and deceleration pattern for the **1 Accel/Decel** parameter.

Settings:

   0 — Linear
   1 — S-Pattern 1
   2 — S-Pattern 2

The figures below provide a profile of the available accel/decel patterns.

Direct Access Number —   **F502**

Parameter Type — **Selection List**

Factory Default — **Linear**

Changeable During Run — **Yes**

Linear acceleration and deceleration is the default pattern and is used on most applications.

Linear Acceleration/Deceleration
S-pattern 1 is used for applications that require quick acceleration and deceleration. This setting is also popular for applications that require shock absorption at the start of acceleration or deceleration.

S-Pattern Acceleration/Deceleration 1
S-pattern 2 decreases the rate of change above the base frequency for acceleration and deceleration.

S-Pattern Acceleration/Deceleration 2
Acc/Dec Pattern 2

Program ⇒ Special ⇒ Accel/Decel 1 – 4 Settings

This parameter enables a user-selected preprogrammed output profile that controls the acceleration and deceleration pattern for the **2 Accel/Decel** parameter.

Settings:

    0 — Linear
    1 — S-Pattern 1
    2 — S-Pattern 2

Direct Access Number — F503

Parameter Type — **Selection List**

Factory Default — **Linear**

Changeable During Run — **Yes**

Acc/Dec Pattern 1 – 4

Program ⇒ Special ⇒ Acc/Dec Special

Four Acceleration times and four Deceleration times may be set up and run individually. **Accel/Decel Time 1 – 4** may be selected using this parameter setting or switched via threshold frequencies, or by discrete input terminal.

This parameter is used to select one of the four configured accel/decel profiles to be used.

Settings:

    1 — Acc/Dec 1
    2 — Acc/Dec 2
    3 — Acc/Dec 3
    4 — Acc/Dec 4

Each Accel/Decel selection is comprised of an **Acceleration Time**, **Deceleration Time**, and a **Pattern** selection. Selection 1, 2, and 3 have a **Switching Frequency** setting. The **Switching Frequency** is used as a threshold frequency that, once reached, the ASD switches to the next higher **Acc/Dec** selection (i.e., 1 to 2, 2 to 3, or 3 to 4). **Switching Frequency** settings are also used during deceleration. A switching frequency setting is not required for **Acc/Dec 4**.

Acc/Dec 1 is set up using parameters F009 (Acc Time), F010 (Dec Time), F502 (Pattern), and F505 (Switching Frequency).

Acc/Dec 2 is set up using parameters F500 (Acc Time), F501 (Dec Time), F503 (Pattern), and F513 (Switching Frequency).

Acc/Dec 3 is set up using parameters F510 (Acc Time), F511 (Dec Time), F512 (Pattern), and F517 (Switching Frequency).

Acc/Dec 4 is set up using parameters F514 (Acc Time), and F515 (Dec Time), F516 (Pattern).

This parameter (F504) is used to manually select **Acc/Dec 1 – 4**.

To switch using the **Terminal Board**, assign the functions **Acc/Dec Switching 1** and **Acc/Dec Switching 2** to two discrete input terminals. Activation combinations of the two terminals result in the **Acc/Dec 1 – 4** selections as shown in Table 4.

Figure 30 shows the setup requirements and the resulting output frequency response when using **Switching Frequency** settings to control the **Acc/Dec** response of the ASD output.

While operating using **S-Pattern 1** the system performance may be further enhanced by the adjustment of parameters F506 – F509. These settings provide for upper and lower **Acc/Dec** limit adjustments. These settings are used to extend or shorten the upper or lower **Acc/Dec** curve.

Note: *If operating from the **Local** mode, press **Esc** from the **Frequency Command** screen to access this parameter.*

Accel/Decel Switching Frequency 1

Program ⇒ Special ⇒ Accel/Decel Special

This parameter sets the frequency at which the acceleration control is switched from the **Accel 1** profile to the **Accel 2** profile during a multiple-acceleration profile configuration.

Direct Access Number — F504

Parameter Type — **Selection List**

Factory Default — **1**

Changeable During Run — **Yes**

Table 4. Using combinations of discrete terminal activations Accel/Decel profiles 1 – 4 may be selected.

S-Pattern Acceleration Lower-Limit Adjustment

Program ⇒ Special ⇒ Accel/Decel Special

During an **S-Pattern 1** or **2** sequence, this parameter settings modifies the acceleration rate for the lower part of the acceleration curve by the percentage set here.

This function is commonly used with transportation and lifting applications.

See parameter F502 on pg. 165 for more information on this setting.

Direct Access Number —   **F506**
Parameter Type — **Numerical**
Factory Default — **10**
Changeable During Run — **Yes**
Minimum — 0
Maximum — 50
Units — %

S-Pattern Acceleration Upper-Limit Adjustment

Program ⇒ Special ⇒ Accel/Decel Special

During an **S-Pattern 1** or **2** sequence, this parameter settings modifies the acceleration rate for the upper part of the acceleration curve by the percentage set here.

This function is commonly used with transportation and lifting applications.

See parameter F502 on pg. 165 for more information on this setting.

Direct Access Number —   **F507**
Parameter Type — **Numerical**
Factory Default — **10**
Changeable During Run — **Yes**
Minimum — 0
Maximum — 50
Units — %

S-Pattern Deceleration Lower-Limit Adjustment

Program ⇒ Special ⇒ Accel/Decel Special

During an **S-Pattern 1** or **2** sequence, this parameter settings modifies the deceleration rate for the lower part of the deceleration curve by the percentage set here.

This function is commonly used with transportation and lifting applications.

See parameter F502 on pg. 165 for more information on this setting.

Direct Access Number —   **F508**
Parameter Type — **Numerical**
Factory Default — **10**
Changeable During Run — **Yes**
Minimum — 0
Maximum — 50
Units — %

S-Pattern Deceleration Upper-Limit Adjustment

Program ⇒ Special ⇒ Accel/Decel Special

During an **S-Pattern 1** or **2** sequence, this parameter settings modifies the deceleration rate for the upper part of the deceleration curve by the percentage set here.

This function is commonly used with transportation and lifting applications.

See parameter F502 on pg. 165 for more information on this setting.

Direct Access Number —   **F509**
Parameter Type — **Numerical**
Factory Default — **10**
Changeable During Run — **Yes**
Minimum — 0
Maximum — 50
Units — %

Acceleration Time 3

Program ⇒ Special ⇒ Accel/Decel 1 – 4 Settings

This parameter specifies the time in seconds for the output of the ASD to go from 0.0 Hz to the **Maximum Frequency** for the **3 Acceleration** profile. The Accel/Decel pattern may be set using F502. The minimum Accel/Decel time may be set using F508.

Note: *An acceleration time shorter than the load will allow may cause nuisance tripping and mechanical stress to loads. **Automatic Accel/Decel**, **Stall**, and **Ridethrough** settings may lengthen the acceleration times.*

Direct Access Number —   **F510**
Parameter Type — **Numerical**
Factory Default — **(ASD-Dependent)**
Changeable During Run — **Yes**
Minimum — 0.1
Maximum — 6000
Units — Seconds

Deceleration Time 3

Program ⇒ Special ⇒ Accel/Decel 1 – 4 Settings

This parameter specifies the time in seconds for the output of the ASD to go from the **Maximum Frequency** to 0.0 Hz for the **3 Deceleration** profile.

The Accel/Decel pattern may be set using F502. The minimum Accel/Decel time may be set using F508.

Note: *A deceleration time shorter than the load will allow may cause nuisance tripping and mechanical stress to loads. **Automatic Accel/Decel**, **Stall**, and **Ridethrough** settings may lengthen the deceleration times.*

Direct Access Number — F511

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

Minimum — 0.1

Maximum — 6000

Units — Seconds

Acceleration/Deceleration Pattern 3

Program ⇒ Special ⇒ Accel/Decel 1 – 4 Settings

This parameter enables a user-selected preprogrammed output profile that controls the acceleration and deceleration pattern for the **3 Accel/Decel** parameter.

Settings:

    0 — Linear
    1 — S-Pattern 1
    2 — S-Pattern 2

Direct Access Number — F512

Parameter Type — **Selection List**

Factory Default — **Linear**

Changeable During Run — **Yes**

Acceleration/Deceleration Switching Frequency 2

Program ⇒ Special ⇒ Accel/Decel Special

This parameter sets the frequency at which the acceleration control is switched from the **Accel 2** profile to the **Accel 3** profile during a multiple-acceleration profile configuration.

Direct Access Number — F513

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — **Max. Freq. (F011)**

Units — Hz

Acceleration Time 4

Program ⇒ Special ⇒ Accel/Decel 1 – 4 Settings

This parameter specifies the time in seconds for the output of the ASD to go from 0.0 Hz to the **Maximum Frequency** for the **4 Acceleration** profile. The Accel/Decel pattern may be set using F502. The minimum Accel/Decel time may be set using F508.

Note: *An acceleration time shorter than the load will allow may cause nuisance tripping and mechanical stress to loads. **Automatic Accel/Decel**, **Stall**, and **Ridethrough** settings may lengthen the acceleration times.*

Direct Access Number — F514

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

Changeable During Run — **Yes**

Minimum — 0.1

Maximum — 6000

Units — Seconds

Deceleration Time 4

Program ⇒ Special ⇒ Accel/Decel 1 – 4 Settings

This parameter specifies the time in seconds for the output of the ASD to go from the **Maximum Frequency** to 0.0 Hz for the **4 Deceleration** profile. The Accel/Decel pattern may be set using F502. The minimum Accel/Decel time may be set using F508.

Note: *A deceleration time shorter than the load will allow may cause nuisance tripping and mechanical stress to loads.* **Automatic Accel/Decel**, **Stall**, *and* **Ridethrough** *settings may lengthen the deceleration times.*

Direct Access Number — F515

Parameter Type — **Numerical**

Factory Default — **(ASD-Dependent)**

Changeable During Run — **Yes**

Minimum — 0.1

Maximum — 6000

Units — Seconds

Acceleration/Deceleration Pattern 4

Program ⇒ Special ⇒ Accel/Decel 1 – 4 Settings

This parameter enables a user-selected preprogrammed output profile that controls the acceleration and deceleration pattern for the **4 Accel/Decel** parameter.

Settings:

     0 — Linear
     1 — S-Pattern 1
     2 — S-Pattern 2

Direct Access Number — F516

Parameter Type — **Selection List**

Factory Default — **Linear**

Changeable During Run — **Yes**

Acceleration/Deceleration Switching Frequency 3

Program ⇒ Special ⇒ Accel/Decel Special

This parameter sets the frequency at which the acceleration control is switched from the **Accel 3** profile to the **Accel 4** profile during a multiple-acceleration profile configuration.

Direct Access Number — F517

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — **Max. Freq.** (F011)

Units — Hz

Pattern Operation Selection

Program ⇒ Pattern Run ⇒ Pattern Run

Pattern Run operation is enabled by selecting **Seconds** or **Minutes** as a unit of measure for the **Operation Time** setting for the selected **Preset Speeds**.

See Parameter F523 for more information on **Selections** and **Group Speeds** setup.

Settings:

     0 — Disabled
     1 — Enabled (Units in Seconds)
     2 — Enabled (Units in Minutes)

Direct Access Number — F520

Parameter Type — **Selection List**

Factory Default — **Disabled**

Changeable During Run — **No**

Pattern Operation Mode

Program ⇒ Pattern Run ⇒ Pattern Run

This parameter sets the start condition of subsequent **Pattern Runs** after the initial **Pattern Run** has been terminated or has completed its programming.

Settings:

     0 — Reset After Stop
     1 — Continue After Stop

Direct Access Number — F521

Parameter Type — **Selection List**

Factory Default — **Reset After Stop**

Changeable During Run — **No**

Pattern 1 Repeat

Program ⇒ Pattern Run ⇒ Pattern Run

This parameter sets the number of times to repeat the **Pattern Group 1**.

Settings:

  1 = Once Then Stop
  2 – 254 = Number of Repeats
  255 = Infinite (Forever)

Direct Access Number —   F522

Parameter Type — **Numerical**

Factory Default — **255 (Infinite)**

Changeable During Run — **No**

Minimum — 1

Maximum — 255 (Infinite)

Units — Repetitions

Pattern Group 1 Selection 1

Program ⇒ Pattern Run ⇒ Speeds

Groups of configured **Preset Speeds** may be selected and run from this screen. The execution of grouped **Preset Speeds** in this manner is called a **Pattern Run**.

One to eight user-selected **Preset Speeds** may be run sequentially for a user-set number of repetitions. The group of user-selected **Preset Speeds** is called a **Pattern Group**. The **Pattern Run** function executes the user-set **Pattern Group**.

Pattern Group 1 is comprised of up to 8 **Selections** with each **Selection** being 1 of 15 possible **Preset Speed** settings. **Skip** may be selected to ignore a **Selection**.

This parameter allows the user to choose one configured **Preset Speed** that is to be used as **Selection 1** (of 8) for **Pattern Group 1**. See F018 for information on configuring the individual **Preset Speeds**. Parameters F524 – F530 may be setup for subsequent **Selections 2** – **8**.

One **Preset Speed** number (1 – 15) or **Skip** is selected for **Selection 1** (F523). The number of times to repeat **Pattern Group 1** is selected at F522. Set this value to **255** to run forever.

Setup **Pattern Group 2** at F531 – F539 if more **Preset Speed** entries are required.

Pattern Run Setup (for Pattern Group 1)

1. From Program ⇒ Pattern Run ⇒ **Speeds**, select the **Preset Speeds** that are to be used as the **Pattern Group 1** set of **Selections**. Select a speed from the 1 – 15 configured presets; 1 speed number per **Selection**. Set any unused **Selections** to **Skip**.

2. From Program ⇒ Pattern Run ⇒ Pattern Run ⇒ **Pattern Operation Selection**, enable the **Pattern Run** mode of operation by selecting **Seconds** or **Minutes** as the unit of measure for the **Operation Time** setting.

3. From Program ⇒ Pattern Run ⇒ **Operation Time**, set the run-time for each **Preset Speed** selected in step 1.

4. Configure two unused discrete input terminals for **Pattern Operation Group 1** and **Pattern Operation Trigger Signal**.

Note: *Activation of the **Pattern Operation Group 1** discrete input terminal is required to enable **Pattern Group 1** for use. Activation of the **Pattern Operation Trigger Signal** discrete input terminal starts the **Pattern Group 1** pattern run.*

5. From Program ⇒ Pattern Run ⇒ Pattern Run ⇒ **Pattern 1 Repeat**, set to the number of times that **Pattern Group 1** is to be run. Set to **255** to run forever.

6. From Program ⇒ Pattern Run ⇒ Pattern Run ⇒ **Pattern Operation Mode**, set the end-of-pattern command to **Reset** or **Continue**.

7. From the **Remote** mode (**Local/Remote** light is off), initiate a **Run** command (i.e., **F** and/or **R** terminal **On**).

8. Connect the **Pattern Operation Group 1** input terminal to **CC**.

9. Connect the **Pattern Operation Trigger Signal** input terminal to **CC** and the **Pattern Run** will start and continue as programmed.

10. Open the **Pattern Operation Trigger Signal** connection to **CC** to stop the **Pattern Run** before its conclusion if required.

Direct Access Number —   **F523**

Parameter Type — **Selection List**

Factory Default — **Skip**

Changeable During Run — **No**

Minimum — Skip

Maximum — 15

Units — Preset Speed Number

Preset Speed Number (vertical label at left of table)

Pattern Group 1 Selection 2

Program ⇒ Pattern Run ⇒ Speeds

This parameter allows the user to select 1 of 15 configured **Preset Speeds** as the number **2 Selection** to be included in **Pattern Group 1**.

Skip may be selected to ignore this **Selection**.

Setting

   0 — Skip

   1 – 15 Preset Speed Number

See F523 for more information on this parameter.

Direct Access Number —   **F524**

Parameter Type — **Selection List**

Factory Default — **Skip**

Changeable During Run — **No**

Pattern Group 1 Selection 3

Program ⇒ Pattern Run ⇒ Speeds

This parameter allows the user to select 1 of 15 configured **Preset Speeds** as the number **3 Selection** to be included in **Pattern Group 1**.

Skip may be selected to ignore this **Selection**.

Setting

   0 — Skip

   1 – 15 Preset Speed Number

See F523 for more information on this parameter.

Direct Access Number —   **F525**

Parameter Type — **Selection List**

Factory Default — **Skip**

Changeable During Run — **No**

Pattern Group 1 Selection 4

Program ⇒ Pattern Run ⇒ Speeds

This parameter allows the user to select 1 of 15 configured **Preset Speeds** as the number **4 Selection** to be included in **Pattern Group 1**.

Skip may be selected to ignore this **Selection**.

Setting

   0 — Skip

   1 – 15 Preset Speed Number

See F523 for more information on this parameter.

Direct Access Number —   **F526**

Parameter Type — **Selection List**

Factory Default — **Skip**

Changeable During Run — **No**

Pattern Group 1 Selection 5

Program ⇒ Pattern Run ⇒ Speeds

This parameter allows the user to select 1 of 15 configured **Preset Speeds** as the number **5 Selection** to be included in **Pattern Group 1**.

Skip may be selected to ignore this **Selection**.

Setting

   0 — Skip

   1 – 15 Preset Speed Number

See F523 for more information on this parameter.

Direct Access Number —   **F527**

Parameter Type — **Selection List**

Factory Default — **Skip**

Changeable During Run — **No**

Pattern Group 1 Selection 6	**Direct Access Number — F528**
Program ⇒ Pattern Run ⇒ Speeds	Parameter Type — **Selection List**
	Factory Default — **Skip**
This parameter allows the user to select 1 of 15 configured **Preset Speeds** as the number **6 Selection** to be included in **Pattern Group 1**.	Changeable During Run — **No**

Skip may be selected to ignore this **Selection**.

Setting

   0 — Skip

   1 – 15 Preset Speed Number

See F523 for more information on this parameter.

Pattern Group 1 Selection 7	**Direct Access Number — F529**
Program ⇒ Pattern Run ⇒ Speeds	Parameter Type — **Selection List**
	Factory Default — **Skip**
This parameter allows the user to select 1 of 15 configured **Preset Speeds** as the number **7 Selection** to be included in **Pattern Group 1**.	Changeable During Run — **No**

Skip may be selected to ignore this **Selection**.

Setting

   0 — Skip

   1 – 15 Preset Speed Number

See F523 for more information on this parameter.

Pattern Group 1 Selection 8	**Direct Access Number — F530**
Program ⇒ Pattern Run ⇒ Speeds	Parameter Type — **Numerical**
	Factory Default — **Skip**
This parameter allows the user to select 1 of 15 configured **Preset Speeds** as the number **8 Selection** to be included in **Pattern Group 1**.	Changeable During Run — **No**

Skip may be selected to ignore this **Selection**.

Setting

   0 — Skip

   1 – 15 Preset Speed Number

See F523 for more information on this parameter.

Pattern 2 Repeat	**Direct Access Number — F531**
Program ⇒ Pattern Run ⇒ Pattern Run	Parameter Type — **Numerical**
	Factory Default — **255 (Infinite)**
This parameter sets the number of times to repeat the **Pattern Group 2**.	Changeable During Run — **No**
	Minimum — 1
	Maximum — 255 (Infinite)
	Units — Repetitions

Pattern Group 2 Selection 1	**Direct Access Number — F532**

Program ⇒ Pattern Run ⇒ Speeds

Parameter Type — **Selection List**

Factory Default — **Skip**

This parameter allows the user to select 1 of 15 configured **Preset Speeds** as the number **1** selection to be included in the **Group 2 Selection**.

Changeable During Run — **No**

Skip may be selected to ignore this **Selection**.

Setting

   0 — Skip

   1 – 15 Preset Speed Number

See F523 for more information on this parameter.

Pattern Group 2 Selection 2	**Direct Access Number — F533**

Program ⇒ Pattern Run ⇒ Speeds

Parameter Type — **Selection List**

Factory Default — **Skip**

This parameter allows the user to select 1 of 15 configured **Preset Speeds** as the number **2** selection to be included in the **Group 2 Selection**.

Changeable During Run — **No**

Skip may be selected to ignore this **Selection**.

Setting

   0 — Skip

   1 – 15 Preset Speed Number

See F523 for more information on this parameter.

Pattern Group 2 Selection 3	**Direct Access Number — F534**

Program ⇒ Pattern Run ⇒ Speeds

Parameter Type — **Selection List**

Factory Default — **Skip**

This parameter allows the user to select 1 of 15 configured **Preset Speeds** as the number **3** selection to be included in the **Group 2 Selection**.

Changeable During Run — **No**

Skip may be selected to ignore this **Selection**.

Setting

   0 — Skip

   1 – 15 Preset Speed Number

See F523 for more information on this parameter.

Pattern Group 2 Selection 4	**Direct Access Number — F535**

Program ⇒ Pattern Run ⇒ Speeds

Parameter Type — **Selection List**

Factory Default — **Skip**

This parameter allows the user to select 1 of 15 configured **Preset Speeds** as the number **4** selection to be included in the **Group 2 Selection**.

Changeable During Run — **No**

Skip may be selected to ignore this **Selection**.

Setting

   0 — Skip

   1 – 15 Preset Speed Number

See F523 for more information on this parameter.

Pattern Group 2 Selection 5

Program ⇒ Pattern Run ⇒ Speeds

This parameter allows the user to select 1 of 15 configured **Preset Speeds** as the number **5** selection to be included in the **Group 2 Selection**.

Skip may be selected to ignore this **Selection**.

Setting

   0 — Skip

   1 – 15 Preset Speed Number

See F523 for more information on this parameter.

Direct Access Number — F536

Parameter Type — **Selection List**

Factory Default — **Skip**

Changeable During Run — **No**

Pattern Group 2 Selection 6

Program ⇒ Pattern Run ⇒ Speeds

This parameter allows the user to select 1 of 15 configured **Preset Speeds** as the number **6** selection to be included in the **Group 2 Selection**.

Skip may be selected to ignore this **Selection**.

Setting

   0 — Skip

   1 – 15 Preset Speed Number

See F523 for more information on this parameter.

Direct Access Number — F537

Parameter Type — **Selection List**

Factory Default — **Skip**

Changeable During Run — **No**

Pattern Group 2 Selection 7

Program ⇒ Pattern Run ⇒ Speeds

This parameter allows the user to select 1 of 15 configured **Preset Speeds** as the number **7** selection to be included in the **Group 2 Selection**.

Skip may be selected to ignore this **Selection**.

Setting

   0 — Skip

   1 – 15 Preset Speed Number

See F523 for more information on this parameter.

Direct Access Number — F538

Parameter Type — **Selection List**

Factory Default — **Skip**

Changeable During Run — **No**

Pattern Group 2 Selection 8

Program ⇒ Pattern Run ⇒ Speeds

This parameter allows the user to select 1 of 15 configured **Preset Speeds** as the number **8** selection to be included in the **Group 2 Selection**.

Skip may be selected to ignore this **Selection**.

Setting

   0 — Skip

   1 – 15 Preset Speed Number

See F523 for more information on this parameter.

Direct Access Number — F539

Parameter Type — **Selection List**

Factory Default — **Skip**

Changeable During Run — **No**

Speed 1 Operation Time	**Direct Access Number —** **F540**
Program ⇒ Pattern Run ⇒ Operation Time	Parameter Type — **Numerical**
	Factory Default — **5.0**
This parameter sets the run-time for **Preset Speed 1**.	Changeable During Run — **Yes**
This time is effective when used with **Group Speeds** and non-**Group Speeds**.	Minimum — 0.1
If the **Auto-Restart** function is activated, the search time required for the **Auto-Restart** function will be subtracted from the **Operation Time** setting; resulting in a shorter run time.	Maximum — 6000.0
	Units — F520 Setting
Speed 2 Operation Time	**Direct Access Number —** **F541**
Program ⇒ Pattern Run ⇒ Operation Time	Parameter Type — **Numerical**
	Factory Default — **5.0**
This parameter sets the run-time for **Preset Speed 2**.	Changeable During Run — **Yes**
This time is effective when used with **Group Speeds** and non-**Group Speeds**.	Minimum — 0.1
If the **Auto-Restart** function is activated, the search time required for the **Auto-Restart** function will be subtracted from the **Operation Time** setting; resulting in a shorter run time.	Maximum — 6000.0
	Units — F520 Setting
Speed 3 Operation Time	**Direct Access Number —** **F542**
Program ⇒ Pattern Run ⇒ Operation Time	Parameter Type — **Numerical**
	Factory Default — **5.0**
This parameter sets the run-time for **Preset Speed 3**.	Changeable During Run — **Yes**
This time is effective when used with **Group Speeds** and non-**Group Speeds**.	Minimum — 0.1
If the **Auto-Restart** function is activated, the search time required for the **Auto-Restart** function will be subtracted from the **Operation Time** setting; resulting in a shorter run time.	Maximum — 6000.0
	Units — F520 Setting
Speed 4 Operation Time	**Direct Access Number —** **F543**
Program ⇒ Pattern Run ⇒ Operation Time	Parameter Type — **Numerical**
	Factory Default — **5.0**
This parameter sets the run-time for **Preset Speed 4**.	Changeable During Run — **Yes**
This time is effective when used with **Group Speeds** and non-**Group Speeds**.	Minimum — 0.1
If the **Auto-Restart** function is activated, the search time required for the **Auto-Restart** function will be subtracted from the **Operation Time** setting; resulting in a shorter run time.	Maximum — 6000.0
	Units — F520 Setting
Speed 5 Operation Time	**Direct Access Number —** **F544**
Program ⇒ Pattern Run ⇒ Operation Time	Parameter Type — **Numerical**
	Factory Default — **5.0**
This parameter sets the run-time for **Preset Speed 5**.	Changeable During Run — **Yes**
This time is effective when used with **Group Speeds** and non-**Group Speeds**.	Minimum — 0.1
If the **Auto-Restart** function is activated, the search time required for the **Auto-Restart** function will be subtracted from the **Operation Time** setting; resulting in a shorter run time.	Maximum — 6000.0
	Units — F520 Setting
Speed 6 Operation Time	**Direct Access Number —** **F545**
Program ⇒ Pattern Run ⇒ Operation Time	Parameter Type — **Numerical**
	Factory Default — **5.0**
This parameter sets the run-time for **Preset Speed 6**.	Changeable During Run — **Yes**
This time is effective when used with **Group Speeds** and non-**Group Speeds**.	Minimum — 0.1
If the **Auto-Restart** function is activated, the search time required for the **Auto-Restart** function will be subtracted from the **Operation Time** setting; resulting in a shorter run time.	Maximum — 6000.0
	Units — F520 Setting

Speed 7 Operation Time	**Direct Access Number — F546**
Program ⇒ Pattern Run ⇒ Operation Time	Parameter Type — **Numerical**
	Factory Default — **5.0**
This parameter sets the run-time for **Preset Speed 7**.	Changeable During Run — **Yes**
This time is effective when used with **Group Speeds** and non-**Group Speeds**.	Minimum — 0.1
If the **Auto-Restart** function is activated, the search time required for the **Auto-Restart** function will be subtracted from the **Operation Time** setting; resulting in a shorter run time.	Maximum — 6000.0
	Units — F520 Setting

Speed 8 Operation Time	**Direct Access Number — F547**
Program ⇒ Pattern Run ⇒ Operation Time	Parameter Type — **Numerical**
	Factory Default — **5.0**
This parameter sets the run-time for **Preset Speed 8**.	Changeable During Run — **Yes**
This time is effective when used with **Group Speeds** and non-**Group Speeds**.	Minimum — 0.1
If the **Auto-Restart** function is activated, the search time required for the **Auto-Restart** function will be subtracted from the **Operation Time** setting; resulting in a shorter run time.	Maximum — 6000.0
	Units — F520 Setting

Speed 9 Operation Time	**Direct Access Number — F548**
Program ⇒ Pattern Run ⇒ Operation Time	Parameter Type — **Numerical**
	Factory Default — **5.0**
This parameter sets the run-time for **Preset Speed 9**	Changeable During Run — **Yes**
This time is effective when used with **Group Speeds** and non-**Group Speeds**.	Minimum — 0.1
If the **Auto-Restart** function is activated, the search time required for the **Auto-Restart** function will be subtracted from the **Operation Time** setting; resulting in a shorter run time.	Maximum — 6000.0
	Units — F520 Setting

Speed 10 Operation Time	**Direct Access Number — F549**
Program ⇒ Pattern Run ⇒ Operation Time	Parameter Type — **Numerical**
	Factory Default — **5.0**
This parameter sets the run-time for **Preset Speed 10**	Changeable During Run — **Yes**
This time is effective when used with **Group Speeds** and non-**Group Speeds**.	Minimum — 0.1
If the **Auto-Restart** function is activated, the search time required for the **Auto-Restart** function will be subtracted from the **Operation Time** setting; resulting in a shorter run time.	Maximum — 6000.0
	Units — F520 Setting

Speed 11 Operation Time	**Direct Access Number — F550**
Program ⇒ Pattern Run ⇒ Operation Time	Parameter Type — **Numerical**
	Factory Default — **5.0**
This parameter sets the run-time for **Preset Speed 11**	Changeable During Run — **Yes**
This time is effective when used with **Group Speeds** and non-**Group Speeds**.	Minimum — 0.1
If the **Auto-Restart** function is activated, the search time required for the **Auto-Restart** function will be subtracted from the **Operation Time** setting; resulting in a shorter run time.	Maximum — 6000.0
	Units — F520 Setting

Speed 12 Operation Time	**Direct Access Number — F551**
Program ⇒ Pattern Run ⇒ Operation Time	Parameter Type — **Numerical**
	Factory Default — **5.0**
This parameter sets the run-time for **Preset Speed 12**	Changeable During Run — **Yes**
This time is effective when used with **Group Speeds** and non-**Group Speeds**.	Minimum — 0.1
If the **Auto-Restart** function is activated, the search time required for the **Auto-Restart** function will be subtracted from the **Operation Time** setting; resulting in a shorter run time.	Maximum — 6000.0
	Units — F520 Setting

Speed 13 Operation Time	**Direct Access Number — F552**
Program ⇒ Pattern Run ⇒ Operation Time	Parameter Type — **Numerical**
	Factory Default — **5.0**
This parameter sets the run-time for **Preset Speed 13**.	Changeable During Run — **Yes**
This time is effective when used with **Group Speeds** and non-**Group Speeds**.	Minimum — 0.1
If the **Auto-Restart** function is activated, the search time required for the **Auto-Restart** function will be subtracted from the **Operation Time** setting; resulting in a shorter run time.	Maximum — 6000.0
	Units — F520 Setting

Speed 14 Operation Time	**Direct Access Number — F553**
Program ⇒ Pattern Run ⇒ Operation Time	Parameter Type — **Numerical**
	Factory Default — **5.0**
This parameter sets the run-time for **Preset Speed 14**.	Changeable During Run — **Yes**
This time is effective when used with **Group Speeds** and non-**Group Speeds**.	Minimum — 0.1
If the **Auto-Restart** function is activated, the search time required for the **Auto-Restart** function will be subtracted from the **Operation Time** setting; resulting in a shorter run time.	Maximum — 6000.0
	Units — F520 Setting

Speed 15 Operation Time	**Direct Access Number — F554**
Program ⇒ Pattern Run ⇒ Operation Time	Parameter Type — **Numerical**
	Factory Default — **5.0**
This parameter sets the run-time for **Preset Speed 15**.	Changeable During Run — **Yes**
This time is effective when used with **Group Speeds** and non-**Group Speeds**.	Minimum — 0.1
If the **Auto-Restart** function is activated, the search time required for the **Auto-Restart** function will be subtracted from the **Operation Time** setting; resulting in a shorter run time.	Maximum — 6000.0
	Units — F520 Setting

Preset Speed Operation Mode	**Direct Access Number — F560**
Program ⇒ Pattern Run ⇒ Operation Mode	Parameter Type — **Selection List**
	Factory Default — **Disabled**
This parameter is used to set the **Preset Speed** operating mode.	Changeable During Run — **No**
Select **Disabled** at this parameter to use the speed command only for **Preset Speed** operation.	
Select **Enabled** at this parameter to apply the control settings of F561 – F575 to the associated **Preset Speed** while operating in the **Preset Speed** mode.	

Settings:

   0 — Disabled (Preset Speed Only)
   1 — Enabled (Full Preset Speed Mode)

Preset Speed 1 Operation Mode

Program ⇒ Pattern Run ⇒ Operation Mode

This parameter is enabled at F560 and is used to set the speed, torque, and direction of **Preset Speed 1**.

This screen is comprised of 4 fields that are labeled as follows: **Direction**, **Acc/Dec Group**, **V/f Group**, and **Torque Limit Group**. Scroll to the field of interest and press the scroll knob (Enter). Using the scroll knob, set the value and press the scroll knob (Enter).

Parameters F562 – F575 are used to set the functions listed here for **Preset Speeds 2 – 15**.

When using communications write the appropriate byte to location F561 as indicated below.

Settings:

    0 — Forward Run
    1 — Reverse Run
    2 — Accel/Decel Switching 1
    4 — Accel/Decel Switching 2
    8 — V/f Switching Signal 1
    16 — V/f Switching Signal 2
    32 — Torque Limit Switching Signal 1
    64 — Torque Limit Switching Signal 2

Direct Access Number — F561

Parameter Type — **Selection List**

Factory Default — **Forward Run**

Changeable During Run — **No**

Writing the following data to location F561 via communications results in:
Forward Run, A/D SW 2, V/f SW 3, Torque Lim SW 4.

	Torque Limit Switch 2		V/f Switch		A/D Switch		F/R
	1	1	1	0	0	1	0
	64	32	16	8	4	2	1

    00=T-Lim 1   00=V/f 1   00=A/D 1   0=F
    01=T-Lim 2   01=V/f 2   01=A/D 2   1=R
    10=T-Lim 3   10=V/f 3   10=A/D 3
    11=T-Lim 4   11=V/f 4   11=A/D 4
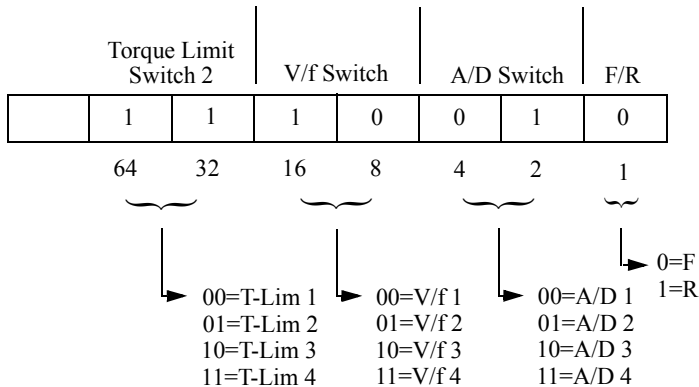

Preset Speed 2 Operation Mode

Program ⇒ Pattern Run ⇒ Operation Mode

Same as **Preset Speed 1 Operation Mode** (see F561).

Direct Access Number — F562

Parameter Type — **Selection List**

Factory Default — **Forward Run**

Changeable During Run — **No**

Preset Speed 3 Operation Mode

Program ⇒ Pattern Run ⇒ Operation Mode

Same as **Preset Speed 1 Operation Mode** (see F561).

Direct Access Number — F563

Parameter Type — **Selection List**

Factory Default — **Forward Run**

Changeable During Run — **No**

Preset Speed 4 Operation Mode

Program ⇒ Pattern Run ⇒ Operation Mode

Same as **Preset Speed 1 Operation Mode** (see F561).

Direct Access Number —   F564

Parameter Type — **Selection List**

Factory Default — **Forward Run**

Changeable During Run — **No**

Preset Speed 5 Operation Mode

Program ⇒ Pattern Run ⇒ Operation Mode

Same as **Preset Speed 1 Operation Mode** (see F561).

Direct Access Number —   F565

Parameter Type — **Selection List**

Factory Default — **Forward Run**

Changeable During Run — **No**

Preset Speed 6 Operation Mode

Program ⇒ Pattern Run ⇒ Operation Mode

Same as **Preset Speed 1 Operation Mode** (see F561).

Direct Access Number —   F566

Parameter Type — **Selection List**

Factory Default — **Forward Run**

Changeable During Run — **No**

Preset Speed 7 Operation Mode

Program ⇒ Pattern Run ⇒ Operation Mode

Same as **Preset Speed 1 Operation Mode** (see F561).

Direct Access Number —   F567

Parameter Type — **Selection List**

Factory Default — **Forward Run**

Changeable During Run — **No**

Preset Speed 8 Operation Mode

Program ⇒ Pattern Run ⇒ Operation Mode

Same as **Preset Speed 1 Operation Mode** (see F561).

Direct Access Number —   F568

Parameter Type — **Selection List**

Factory Default — **Forward Run**

Changeable During Run — **No**

Preset Speed 9 Operation Mode

Program ⇒ Pattern Run ⇒ Operation Mode

Same as **Preset Speed 1 Operation Mode** (see F561).

Direct Access Number —   F569

Parameter Type — **Selection List**

Factory Default — **Forward Run**

Changeable During Run — **No**

Preset Speed 10 Operation Mode

Program ⇒ Pattern Run ⇒ Operation Mode

Same as **Preset Speed 1 Operation Mode** (see F561).

Direct Access Number —   F570

Parameter Type — **Selection List**

Factory Default — **Forward Run**

Changeable During Run — **No**

Preset Speed 11 Operation Mode

Program ⇒ Pattern Run ⇒ Operation Mode

Same as **Preset Speed 1 Operation Mode** (see F561).

Direct Access Number —   F571

Parameter Type — **Selection List**

Factory Default — **Forward Run**

Changeable During Run — **No**

Preset Speed 12 Operation Mode

Program ⇒ Pattern Run ⇒ Operation Mode

Same as **Preset Speed 1 Operation Mode** (see F561).

Direct Access Number —   F572

Parameter Type — **Selection List**

Factory Default — **Forward Run**

Changeable During Run — **No**

Preset Speed 13 Operation Mode

Program ⇒ Pattern Run ⇒ Operation Mode

Same as **Preset Speed 1 Operation Mode** (see F561).

Direct Access Number —   F573

Parameter Type — **Selection List**

Factory Default — **Forward Run**

Changeable During Run — **No**

Preset Speed 14 Operation Mode

Program ⇒ Pattern Run ⇒ Operation Mode

Same as **Preset Speed 1 Operation Mode** (see F561).

Direct Access Number —	**F574**
Parameter Type — **Selection List**	
Factory Default — **Forward Run**	
Changeable During Run — **No**	

Preset Speed 15 Operation Mode

Program ⇒ Pattern Run ⇒ Operation Mode

Same as **Preset Speed 1 Operation Mode** (see F561).

Direct Access Number —	**F575**
Parameter Type — **Selection List**	
Factory Default — **Forward Run**	
Changeable During Run — **No**	

Motor Overload Protection Level 1

Program ⇒ Fundamental ⇒ Motor Set 1

This parameter specifies the motor overload current level for **Motor Set** 1. This value is entered as either a percentage of the full load rating of the ASD or as a percentage of the FLA of the motor.

The unit of measurement for this parameter may be set to **A/V** (Amps) or it may be set as a percentage of the ASD rating. The nameplated FLA of the motor may be entered directly when **Amps** is selected as the unit of measurement (see F701 to change the display unit).

Motor Overload Protection Level 1 settings will be displayed in **Amps** if the **EOI** display units are set to **A/V** rather than %.

Direct Access Number —	**F600**
Parameter Type — **Numerical**	
Factory Default — **100**	
Changeable During Run — **Yes**	
Minimum — 10	
Maximum — 100.0	
Units — %	

Stall Prevention Level

Program ⇒ Protection ⇒ Stall

This parameter specifies the output current level at which the output frequency is reduced in an attempt to prevent a trip. The over-current level is entered as a percentage of the maximum rating of the drive.

Note: *The **Motor Overload Protection** parameter must enabled at F017 to use this feature.*

Direct Access Number —	**F601**
Parameter Type — **Numerical**	
Factory Default — **(ASD-Dependent)**	
Changeable During Run — **Yes**	
Minimum — 10	
Maximum — 165	
Units — %	

Retain Trip Record at Power Down

Program ⇒ Protection ⇒ Trip Settings

This parameter **Enables/Disables** the **Trip Record Retention** setting. When enabled, this feature logs the trip event and retains the trip information when the system powers down. The trip information may be viewed from the (Program ⇒ Utilities ⇒) **Trip History** screen or the **Monitor** screen.

When disabled, the trip information will be cleared when the system powers down.

Settings:

  0 — Disabled
  1 — Enabled

Direct Access Number —	**F602**
Parameter Type — **Selection List**	
Factory Default — **Disabled**	
Changeable During Run — **Yes**	

Emergency Off Mode Settings

Program ⇒ Protection ⇒ Emergency Off Settings

This parameter determines the method used to stop the motor in the event that an **Emergency Off** command is received and the system is configured to use this feature.

This setting may also be associated with the **FL** terminals to allow the **FL** relay to change states when an **EOFF** condition occurs by setting the **FL** terminal to **Fault FL (all)** (see F132).

Note: *A supplemental emergency stopping system should be used with the ASD. Emergency stopping should not be a task of the ASD alone.*

Settings:

    0 — Coast Stop
    1 — Deceleration Stop
    2 — DC Injection Braking Stop
    3 — Deceleration Stop (Decel 4 setting; F515)

Direct Access Number — F603
Parameter Type — **Selection List**
Factory Default — **Coast Stop**
Changeable During Run — **No**

Emergency Off DC Injection Application Time

Program ⇒ Protection ⇒ Emergency Off Settings

When **DC Injection** is selected at F603 this parameter determines the time that the **DC Injection Braking** is applied to the motor.

Direct Access Number — F604
Parameter Type — **Numerical**
Factory Default — **1.0**
Changeable During Run — **Yes**
Minimum — 0.0
Maximum — 20.0
Units — Seconds

ASD Output Phase Failure Detection

Program ⇒ Protection ⇒ Phase Loss

This parameter **Enables/Disables** the monitoring of each phase of the 3-phase output signal (U, V, or W) of the ASD. If either line is missing, inactive, or not of the specified level for one second or more, the ASD incurs a trip.

Note: *Autotune checks for phase failures regardless of this setting.*

Settings:

    0 — Disabled (No Detection)
    1 — Enabled (Run at Startup and Retry)
    2 — Enabled (Every Run Command and Retry)
    3 — Enabled (During Run)
    4 — Enabled (At Startup and During Run)
    5 — Enabled (Detects an ALL-PHASE Failure ONLY - Will Not Trip, Restarts At Reconnect)

Direct Access Number — F605
Parameter Type — **Selection List**
Factory Default — **Disabled**
Changeable During Run — **No**

Overload Reduction Starting Frequency

Program ⇒ Protection ⇒ Overload

This parameter is primarily used with V/f motors. It is used to reduce the starting frequency at which the **Overload Reduction** function begins and is useful during extremely low-speed motor operation.

During very low-speed operation the cooling efficiency of the motor decreases. Lowering the start frequency of the **Overload Reduction** function aides in minimizing the generated heat and precluding an **Overload** trip.

This function is useful in loads such as fans, pumps, and blowers that have the square reduction torque characteristic.

Set parameter F607 to the desired **Overload Time Limit**.

Direct Access Number —	**F606**
Parameter Type — **Numerical**	
Factory Default — **6.00**	
Changeable During Run — **Yes**	
Minimum — 0.00	
Maximum — 30.00	
Units — Hz	

Motor 150% Overload Time Limit

Program ⇒ Protection ⇒ Overload

This parameter establishes a time that the motor may operate at 150% of its rated current before tripping. This setting applies the time/150% reference to the individual settings of each motor (e.g., this setting references 150% of the F600 setting for the 1 motor).

The unit will trip sooner than the time entered here if the overload is greater than 150%.

Direct Access Number —	**F607**
Parameter Type — **Numerical**	
Factory Default — **300**	
Changeable During Run — **Yes**	
Minimum — 10	
Maximum — 2400	
Units — Seconds	

ASD Input Phase Failure Detection

Program ⇒ Protection ⇒ Phase Loss

This parameter enables the 3-phase input power phase loss detection feature. A loss of either input phase (R, S, or T) results in a trip.

Settings:

   0 — Disabled
   1 — Enabled

Direct Access Number —	**F608**
Parameter Type — **Selection List**	
Factory Default — **Enabled**	
Changeable During Run — **No**	

Low-Current Detection Current Hysteresis Width

Program ⇒ Protection ⇒ Low-Current Settings

During a momentary low-current condition, this parameter provides a current threshold level to which the low-current condition must return within the time setting of F612 or a **Low-Current Trip** will be incurred.

Direct Access Number —	**F609**
Parameter Type — **Numerical**	
Factory Default — **10**	
Changeable During Run — **Yes**	
Minimum — 1	
Maximum — 20	
Units — %	

Low-Current Trip

Program ⇒ Protection ⇒ Low-Current Settings

This parameter **Enables/Disables** the low-current trip feature.

When enabled, the drive will trip on a low-current fault if the output current of the drive falls below the level defined at F611 and remains there for the time set at F612.

Settings:

   0 — Disabled
   1 — Enabled

Direct Access Number —	**F610**
Parameter Type — **Selection List**	
Factory Default — **Disabled**	
Changeable During Run — **No**	

Low-Current Detection Threshold

Program ⇒ Protection ⇒ Low-Current Settings

With the **Low-Current Trip** (F610) parameter is enabled, this function sets the low-current trip threshold.

The threshold value is entered as a percentage of the maximum rating of the drive.

Direct Access Number — F611

Parameter Type — **Numerical**

Factory Default — **0**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 100

Units — %

Low-Current Trip Threshold Time

Program ⇒ Protection ⇒ Low-current Settings

With the **Low-Current Trip** (F610) parameter is enabled, this function sets the time that the low-current condition must exist to cause a trip.

Direct Access Number — F612

Parameter Type — **Numerical**

Factory Default — **0**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 255

Units — Seconds

Short Circuit Detection At Start

Program ⇒ Protection ⇒ Special Protection Parameters

This parameter determines when the system will perform an **Output Short Circuit** test.

Note: *Selection 3 is recommended for high-speed motor applications. Because of the low impedance of high-speed motors the standard-pulse setting may result in a motor malfunction.*

Settings:

0 — Every Start (Standard Pulse)
1 — Power On or Reset (Standard Pulse)
2 — Every Start (Short Pulse)
3 — Power On or Reset (Short Pulse)

Direct Access Number — F613

Parameter Type — **Selection List**

Factory Default — **Every Start** (Standard Pulse)

Changeable During Run — **No**

Over-Torque Trip

Program ⇒ Protection ⇒ Over-Torque Parameters

This parameter **Enables/Disables** the **Over-Torque Tripping** function.

When enabled, the ASD trips if an output torque value greater than the setting of F616 or F617 exists for a time longer than the setting of F618.

When disabled, the ASD does not trip due to over-torque conditions.

Note: *A discrete output terminal may be activated when an over-torque alarm occurs if so configured (see F130).*

Settings:

0 — Disabled
1 — Enabled

Direct Access Number — F615

Parameter Type — **Selection List**

Factory Default — **Disabled**

Changeable During Run — **No**

Over-Torque Detection Level (Positive Torque)

Program ⇒ Protection ⇒ Over-Torque Parameters

This parameter sets the torque threshold level that is used as a setpoint for over-torque tripping during positive torque. This setting is a percentage of the maximum rated torque of the drive.

This function is enabled at F615.

Direct Access Number —	**F616**
Parameter Type —	**Numerical**
Factory Default —	**200.00**
Changeable During Run —	**No**
Minimum —	0.00
Maximum —	250.00
Units —	%

Over-Torque Detection Level (Negative Torque)

Program ⇒ Protection ⇒ Over-Torque Parameters

This parameter sets the torque threshold level that is used as a setpoint for over-torque tripping during negative torque (regen). This setting is a percentage of the maximum rated torque of the drive.

This function is enabled at F615.

Direct Access Number —	**F617**
Parameter Type —	**Numerical**
Factory Default —	**200.00**
Changeable During Run —	**No**
Minimum —	0.00
Maximum —	250.00
Units —	%

Over-Torque Detection Time

Program ⇒ Protection ⇒ Over-Torque Parameters

This parameter sets the amount of time that the over-torque condition may exceed the tripping threshold level set at F616 and F617 before a trip occurs.

This function is enabled at F615.

Direct Access Number —	**F618**
Parameter Type —	**Numerical**
Factory Default —	**0.50**
Changeable During Run —	**No**
Minimum —	0.00
Maximum —	10.0
Units —	Seconds

Over-Torque Detection Hysteresis

Program ⇒ Protection ⇒ Over-Torque Parameters

During a momentary over-torque condition, this parameter provides a torque threshold level to which the over-torque condition must return within the time setting of F618 or an **Over-Torque Trip** will be incurred.

Direct Access Number —	**F619**
Parameter Type —	**Numerical**
Factory Default —	**10.00**
Changeable During Run —	**Yes**
Minimum —	0.00
Maximum —	100.00
Units —	%

Cooling Fan Control

Program ⇒ Protection ⇒ Special Protection Parameters

This parameter sets the cooling fan run-time command.

Settings:

    0 — Automatic
    1 — Always On

Direct Access Number —	**F620**
Parameter Type —	**Selection List**
Factory Default —	**Automatic**
Changeable During Run —	**Yes**

Cumulative Operation Time Alarm

Program ⇒ Protection ⇒ Special Protection Parameters

This parameter sets a run-time value that, once exceeded, closes a discrete output contact. The output signal may be used to control external equipment or used to engage a brake.

Associate the **Total-Operation-Hours Alarm** setting of Table 8 on pg. 239 to a discrete output contactor.

Note: *The time displayed is 1/10th of the actual time (0.1 hr. = 1.0 hr.).*

Direct Access Number —	**F621**
Parameter Type —	**Numerical**
Factory Default —	**610.0**
Changeable During Run —	**Yes**
Minimum —	0.0
Maximum —	999.9
Units —	Hours (X 10)

Abnormal Speed Detection Time Program ⇒ Protection ⇒ Abnormal Speed Settings This parameter sets the time that an over-speed condition must exist to cause a trip. This parameter functions in conjunction with the settings of F623 and F624.	**Direct Access Number —** **F622** Parameter Type — **Numerical** Factory Default — **0.01** Changeable During Run — **Yes** Minimum — 0.01 Maximum — 100.00 Units — Seconds
Over-Speed Detection Frequency Upper Band Program ⇒ Protection ⇒ Abnormal Speed Settings This parameter sets the upper level of the **Base Frequency** range that, once exceeded, will cause an **Over-Speed Detected** alert. This parameter functions in conjunction with the settings of F622 and F624.	**Direct Access Number —** **F623** Parameter Type — **Numerical** Factory Default — **0.00 (Disabled)** Changeable During Run — **Yes** Minimum — 0.0 (Disabled) Maximum — 30.00 Units — Hz
Over-Speed Detection Frequency Lower Band Program ⇒ Protection ⇒ Abnormal Speed Settings This parameter sets the lower level of the **Base Frequency** range that, once the output speed falls below this setting, will cause a **Speed Drop Detected** alert. This parameter functions in conjunction with the settings of F622 and F623.	**Direct Access Number —** **F624** Parameter Type — **Numerical** Factory Default — **0.00 (Disabled)** Changeable During Run — **Yes** Minimum — 0.00 (Disabled) Maximum — 30.00 Units — Hz
Over-Voltage Limit Operation Level Program ⇒ Protection ⇒ Stall This parameter sets the upper DC bus voltage threshold that, once exceeded, will cause an **Over-Voltage Stall**. An **Over-Voltage Stall** increases the output frequency of the drive during deceleration for a specified time in an attempt to prevent an **Over-Voltage Trip**. If the over-voltage condition persists for over 4 mS, an **Over-Voltage Trip** will be incurred. This parameter is enabled at F305. *Note:* *This parameter setting may increase deceleration times.*	**Direct Access Number —** **F626** Parameter Type — **Numerical** Factory Default — **(ASD-Dependent)** Changeable During Run — **Yes** Minimum — 100 Maximum — 150 Units — %

Under-Voltage Trip
 	
Program ⇒ Protection ⇒ Under-Voltage/Ridethrough
 	
This parameter **Enables/Disables** the **Under-Voltage Trip** function.
 	
With this parameter **Enabled**, the ASD will trip if the under-voltage condition persists for a time greater than the F628 setting.
 	
A user-selected contact may be actuated if so configured.
 	
If **Disabled** the ASD will stop and not trip; the **FL** contact is not activated.
 	
Settings:
 	
    0 — Disabled
    1 — Enabled
	Direct Access Number — **F627**
	Parameter Type — **Selection List**
	Factory Default — **Disabled**
	Changeable During Run — **No**

Under-Voltage Trip Detection Time	Direct Access Number — **F628**
Program ⇒ Protection ⇒ Under-Voltage/Ridethrough	Parameter Type — **Numerical**
	Factory Default — **0.03**
This parameter sets the time that the under-voltage condition must exist to cause an **Under-Voltage Trip**.	Changeable During Run — **No**
	Minimum — 0.01
This parameter is enabled at F627.	Maximum — 10.00
	Units — Seconds

Regenerative Power Ridethrough Control Level	Direct Access Number — **F629**
Program ⇒ Protection ⇒ Under-Voltage/Ridethrough	Parameter Type — **Numerical**
	Factory Default — **(ASD-Dependent)**
This parameter is activated during regeneration. It is used to set the low end of the DC bus voltage threshold that, once the bus voltage drops below this setting, activates the setting of F302 (Ridethrough Mode).	Changeable During Run — **No**
	Minimum — 55
	Maximum — 100
Activation may be the result of a momentary power loss or an excessive load on the bus voltage.	Units — %

During a **Ridethrough**, regenerative energy is used to maintain the control circuitry settings for the duration of the **Ridethrough**; it is not used to drive the motor.

The motor(s) of the system are stopped and then restarted automatically or may continue seamlessly if so configured.

See F302 for more information on this parameter.

Note: This parameter setting may increase deceleration times.

Brake Answer Wait Time	Direct Access Number — **F630**
Program ⇒ Protection ⇒ Special Protection Parameters	Parameter Type — **Numerical**
	Factory Default — **0.0 (Disabled)**
This parameter is used in conjunction with the discrete input terminal setting **Brake Answerback Input** (see Table 5 on pg. 234 for more information on this feature).	Changeable During Run — **Yes**
	Minimum — 0.0 (Disabled)
	Maximum — 10.0
After activating the discrete input terminal **Braking Request**, the setting of this parameter starts a count-down timer in which 1) a **Brake Answerback Input** response must be received or 2) the brake must release before the timer expires.	Units — Seconds

Should this timer setting expire before the **Brake Answerback Input** is returned or the brake releases, a **Brake Fault** (E-11) is incurred. Otherwise, the brake releases and normal motor operations resume.

ASD Overload	Direct Access Number — **F631**
Program ⇒ Protection ⇒ Overload	Parameter Type — **Selection List**
	Factory Default — **Thermal Detection + Overload**
This parameter is used to protect the ASD from an over-current condition. The standard overload rating of the H9 ASD is 120% operation for 60 seconds.	Changeable During Run — **No**

This setting allows for the overload protection to be switched from the standard overload detection means (Thermal Detection <u>and</u> Overload) to thermal detection only.

Settings:

    0 — Thermal Detection + Overload
    1 — Thermal Detection Only

The **Thermal Detection Only** selection is used when multiple devices are installed horizontally as described on pg. 15.

V/I Analog Input Broken Wire Detection Level

Program ⇒ Terminal ⇒ Input Special Functions

This parameter is enabled by providing a non-zero value here. This function monitors the **V/I** input signal and if the **V/I** input signal falls below the level specified here and remains there for a period of 0.3 seconds or more a trip will be incurred (E-18).

This value is entered as 0% to 100% of the **V/I** input signal range.

Direct Access Number — F633

Parameter Type — **Numerical**

Factory Default — **0 (Disabled)**

Changeable During Run — **No**

Minimum — 1

Maximum — 100

Units — %

Annual Average Ambient Temperature

Program ⇒ Special ⇒ Special Parameters

This parameter is used in conjunction with a discrete output terminal setting to notify the operator of the remaining useful life of critical components of the ASD system.

With a discrete output terminal set to **Part Replacement Alarm** (see Table 8 on pg. 239) and the calculation derived from the parameter setting, maintenance scheduling may be enhanced.

Settings:

    1 — Under 10° C (50° F)
    2 — Under 20° C (68° F)
    3 — Under 30° C (86° F)
    4 — Under 40° C (104° F)
    5 — Under 50° C (122° F)
    6 — Under 60° C (140° F)

Direct Access Number — F634

Parameter Type — **Selection List**

Factory Default — **Under 30°**

Changeable During Run — **No**

Rush Relay Current Activation Time

Program ⇒ Special ⇒ Special Parameters⇒ Rush Relay Current Activation Time

At system startup, this parameter sets a time-delay for the start of the **Rush Relay** activation in an attempt to allow the DC bus voltage to reach the normal operating level before outputting a signal to the motor.

Direct Access Number — F635

Parameter Type — **Numerical**

Factory Default — **0.0**

Changeable During Run — **No**

Minimum — 0.0

Maximum — 2.5

Units — Seconds

PTC1 Thermal Selection

Program ⇒ Special ⇒ Special Parameters⇒ PTC1 Thermal Selection

This parameter **Enables/Disables** the optional external thermal detection circuit of the **Expansion IO Card Option 1**. A thermistor is connected from **TH1+** to **TH1-** of **TB3** on the **Expansion IO Card Option 1**.

Should the thermistor resistance reading fall below 50Ω because of an over-temperature condition or exceed 3000Ω because of an open circuit an **External Thermal Fault** (OH2) will be incurred.

Note: *While this parameter is **Enabled**, the system cannot be restarted until the thermistor value recovers to the level of 1.8 kΩ from an over-temperature condition. An **Auto-Restart** will not be initiated subsequent to an **External Thermal Trip (OH2)**. A manual restart will be required in the event of an **OH2** trip.*

Settings:

    0 — Disabled
    1 — Detect Disconnect

Direct Access Number — F637

Parameter Type — **Selection List**

Factory Default — **Disabled**

Changeable During Run — **No**

PTC2 Thermal Selection

Program ⇒ Special ⇒ Special Parameters⇒ PTC2 Thermal Selection

This parameter **Enables/Disables** the optional external thermal detection circuit of the **Expansion IO Card Option 2**. A thermistor is connected from **TH1+** to **TH1-** of **TB4** on the **Expansion IO Card Option 2**.

Should the thermistor resistance reading fall below 50Ω because of an over-temperature condition or exceed 3000Ω because of an open circuit an **External Thermal Fault** (OH2) will be incurred.

Note: *While this parameter is **Enabled**, the system cannot be restarted until the thermistor value recovers to the level of 1.8 kΩ from an over-temperature condition. An **Auto-Restart** will not be initiated subsequent to an **External Thermal Trip** (OH2). A manual restart will be required in the event of an **OH2** trip.*

Settings:

   0 — Disabled
   1 — Detect Disconnect

Direct Access Number —   **F638**
Parameter Type — S**election List**
Factory Default — **Disabled**
Changeable During Run — **No**

Braking Resistance Overload Time (10x rated torque)

Program ⇒ Protection ⇒ Dynamic Braking

This parameter sets the time that the braking resistor is allowed to sustain and overload condition before a trip is incurred.

This feature is useful for applications that have a fluctuating load or for loads that require a long deceleration time.

Direct Access Number —   **F639**
Parameter Type — **Numerical**
Factory Default — **5.0**
Changeable During Run — **No**
Minimum — 0.1
Maximum — 600.0
Units — Seconds

Step-Out Current Detection Level

Program ⇒ Motor ⇒ PM Motor

This parameter is used with synchronous motor applications only.

Contact the TIC Customer Support Center for information on this parameter.

Direct Access Number —   **F640**
Parameter Type — **Numerical**
Factory Default — **100**
Changeable During Run — **Yes**
Minimum — 10
Maximum — 150
Units — %

Step-Out Current Detection Time

Program ⇒ Motor ⇒ PM Motor

This parameter is used with synchronous motor applications only.

Contact the TIC Customer Support Center for information on this parameter.

Direct Access Number —   **F641**
Parameter Type — **Numerical**
Factory Default — **00**
Changeable During Run — **Yes**
Minimum — 0.00
Maximum — 25.0
Units — Seconds

Adding Input Selection

Program ⇒ Feedback ⇒ Override Control

This parameter **Enables/Disables** the feature that allows for the external adjustment of the **Output Frequency**.

Selecting either of the input methods listed enables this feature. The selected input is used as a modifier of the programmed **Output Frequency**.

Settings:

  0 — Disabled
  1 — V/I
  2 — RR
  3 — RX
  4 — EOI (Keypad)
  5 — RS485 (2-Wire)
  6 — RS485 (4-Wire)
  7 — Communication Option Board
  8 — RX2 Option (AI1)
  9 — Option V/I
  10 — UP/DOWN Frequency (Terminal Board)
  11 — Pulse Input (Option)
  12 — Pulse Input (Motor CPU)
  13 — Binary/BCD Input (Option)

Direct Access Number — F660
Parameter Type — **Selection List**
Factory Default — **Disabled**
Changeable During Run — **Yes**

Multiplying Input Selection

Program ⇒ Feedback ⇒ Override Control

This parameter **Enables/Disables** the feature that allows for the external adjustment of the commanded frequency.

Selecting either of the input methods listed enables this feature. The selected input is used as a multiplier of the commanded frequency.

If **Setting** (F729) is selected, the % value entered at parameter F729 is used as the multiplier of the commanded frequency.

Settings:

  0 — Disabled
  1 — V/I
  2 — RR
  3 — RX
  4 — Setting (F729)
  5 — RX2 Option (AI1)

Direct Access Number — F661
Parameter Type — **Selection List**
Factory Default — **Disabled**
Changeable During Run — **No**

AM Output Terminal Function

Program ⇒ Terminal ⇒ Analog Output Terminals

This parameter is used to set the output function of the **AM** analog output terminal. The **AM** analog output terminal produces an output current that is proportional to the magnitude of the function assigned to this terminal. The available assignments for this output terminal are listed in Table 6 on pg. 237.

Note: *To read **current** at this terminal connect a 100 – 500Ω resistor from the **AM** (+) terminal through the series Ammeter to the **CC** (-) terminal.*

AM Terminal Setup Parameters
F670 — Set AM Function
F671 — Calibrate AM Terminal
F685 — Output Response Polarity Selection
F686 — Set Zero Level

Direct Access Number — F670

Parameter Type — **Selection List**

Factory Default — **Output Current**

Changeable During Run — **Yes**

AM Output Terminal Adjustment

Program ⇒ Terminal ⇒ Analog Output Terminals

This parameter is used to calibrate the **AM** analog output.

To calibrate the **AM** analog output, connect an ammeter as described at parameter F670.

With the drive is running at a known value (e.g., output frequency), adjust this parameter until the associated function of parameter F670 produces the desired DC level output at the **AM** output terminal.

See F670 for more information on this setting.

Direct Access Number — F671

Parameter Type — **Numerical**

Factory Default — **512**

Changeable During Run — **Yes**

Minimum — 1

Maximum — 1280

MON1 Terminal Meter Selection

Program ⇒ Terminal ⇒ Analog Output Terminals

This parameter is used to set the output function of the **MON1** analog output terminal. The available assignments for this output terminal are listed in Table 6 on pg. 237.

The **MON1** analog output terminal produces an output voltage or current that is proportional to the magnitude of the function assigned to this terminal.

Note: *The **Expansion IO Card Option 2** option board (P/N ETB004Z) is required to use this terminal.*

See the **Expansion IO Card Option 2** instruction manual (P/N 58686) for more information on the function of this terminal.

MON1 Terminal Setup Parameters

F672 — MON1 Output Function
F673 — MON1 Terminal Meter Adjustment
F688 — MON1 Voltage/Current Output Switching
F689 — MON1 Output Gradient Characteristic
F690 — MON1 Bias Adjustment Set Zero Level

Direct Access Number — F672

Parameter Type — **Selection List**

Factory Default — **Output Voltage**

Changeable During Run — **Yes**

MON1 Terminal Adjustment

Program ⇒ Terminal ⇒ Analog Output Terminals

This parameter is used to set the gain of the **MON1** output terminal and is used in conjunction with the settings of parameter F672.

See parameter F672 for more information on this setting.

Direct Access Number — **F673**
Parameter Type — **Numerical**
Factory Default — **512**
Changeable During Run — **Yes**
Minimum — 1
Maximum — 1280

MON2 Terminal Meter Selection

Program ⇒ Terminal ⇒ Analog Output Terminals

This parameter is used to set the output function of the **MON2** analog output terminal. The available assignments for this output terminal are listed in Table 6 on pg. 237.

The **MON2** analog output terminal produces an output voltage or current that is proportional to the magnitude of the function assigned to this terminal.

Note: *The **Expansion IO Card Option 2** option board (P/N ETB004Z) is required to use this terminal.*

See the **Expansion IO Card Option 2** instruction manual (P/N 58686) for more information on the function of this terminal.

MON2 Terminal Setup Parameters

    F674 — MON2 Output Function
    F675 — MON2 Terminal Meter Adjustment
    F691 — MON2 Voltage/Current Output Switching
    F692 — MON2 Output Gradient Characteristic
    F693 — MON2 Bias Adjustment Set Zero Level

Direct Access Number — **F674**
Parameter Type — **Selection List**
Factory Default — **Output Frequency**
Changeable During Run — **Yes**

MON2 Terminal Adjustment

Program ⇒ Terminal ⇒ Analog Output Terminals

This parameter is used to set the gain of the **MON2** output terminal and is used in conjunction with the settings of parameter F674.

See parameter F674 for more information on this setting.

Direct Access Number — **F675**
Parameter Type — **Numerical**
Factory Default — **512**
Changeable During Run — **Yes**
Minimum — 1
Maximum — 1280

FP Terminal Assignment

Program ⇒ Terminal ⇒ Analog Output Terminals

This parameter sets the functionality of the **FP** output terminal to any one of the user-selectable functions listed in Table 6 on pg. 237 and is enabled at parameter F669.

As the assigned function changes in magnitude or frequency, the pulse count of the **FP** output terminal pulse train changes in direct proportion to changes in the assigned function.

Note: *The duty cycle of the output pulse train remains at 65 ±5.0 μS.*

This parameter is used in conjunction with parameter F677.

Direct Access Number — **F676**
Parameter Type — **Selection List**
Factory Default — **Output Frequency**
Changeable During Run — **Yes**

Pulse Output Frequency	**Direct Access Number — F677**
Program ⇒ Terminal ⇒ Analog Output Terminals	Parameter Type — **Numerical**
	Factory Default — **3.84**
This parameter scales the **FP** output terminal by setting the pulses-per-second output signal of the **FP** terminal.	Changeable During Run — **Yes**
	Minimum — 1.00
See F676 for more information on this parameter.	Maximum — 43.20
	Units — Pulses/Second

FM Voltage/Current Output Switching	**Direct Access Number — F681**
Program ⇒ Terminal ⇒ Analog Output Terminals	Parameter Type — **Selection List**
	Factory Default — **0–10V**
This parameter is used to select the type of output signal provided at the **FM** terminal (i.e., voltage or current).	Changeable During Run — **No**
The output voltage and current range is 0 – 10 VDC and 0 – 20 mA, respectively.	
See F005 for more information on this setting.	

Settings:

    0 — 0 – 10 V
    1 — 0 – 20 mA

FM Output Gradient Characteristic	**Direct Access Number — F682**
Program ⇒ Terminal ⇒ Analog Output Terminals	Parameter Type — **Selection List**
	Factory Default — **Plus**
This parameter sets the output response polarity of the **FM** output terminal. The **FM** output terminal response may be set to respond inversely (-) or directly (+) to the input signal.	Changeable During Run — **Yes**
See F005 for more information on this setting.	

Settings:

    0 — Minus (Negative Gradient)
    1 — Plus (Positive Gradient)

FM Bias Adjustment	**Direct Access Number — F683**
Program ⇒ Terminal ⇒ Analog Output Terminals	Parameter Type — **Numerical**
	Factory Default — **0.0**
This parameter setting is used to ensure that a zero-level input signal produces a zero-level output at the **FM** terminal.	Changeable During Run — **Yes**
Set the function of F005 to zero and then set this parameter to zero for proper operation.	Minimum — -10.0
	Maximum — +100.0
See F005 for more information on this setting.	Units — %

AM Output Gradient Characteristic	**Direct Access Number — F685**
Program ⇒ Terminal ⇒ Analog Output Terminals	Parameter Type — **Selection List**
	Factory Default — **Plus**
This parameter sets the output response polarity of the **AM** output terminal.	Changeable During Run — **Yes**
The **AM** output terminal response may be set to respond inversely (-) or directly (+) to the input signal.	
See F670 for more information on this setting.	

Settings:

    0 — Minus (Negative Gradient)
    1 — Plus (Positive Gradient)

AM Bias Adjustment

Program ⇒ Terminal ⇒ Analog Output Terminals

This parameter setting is used to ensure that a zero-level input signal produces a zero-level output at the **AM** terminal.

Set the function set at F670 to zero and then set this parameter to zero for proper operation.

See F670 for more information on this setting.

Direct Access Number — F686

Parameter Type — **Numerical**

Factory Default — **0.0**

Changeable During Run — **Yes**

Minimum — -10.0

Maximum — +100.0

Units — %

MON 1 Voltage/Current Output Switching

Program ⇒ Terminal ⇒ Analog Output Terminals

This parameter is used to set the output signal type of the **MON1** output terminal.

Settings

    0 — -10 V – +10 V
    1 — 0 – 10 V
    2 — 0 – 20 mA

Direct Access Number — F688

Parameter Type — **Selection List**

Factory Default — **0 – 10V**

Changeable During Run — **Yes**

MON 1 Output Gradient Characteristic

Program ⇒ Terminal ⇒ Analog Output Terminals

This parameter sets the output response polarity of the **MON1** output terminal. The **MON1** output terminal response may be set to respond inversely (-) or directly (+) to the input signal.

See parameter F672 for more information on this setting.

Settings:

    0 — Minus (Negative Gradient)
    1 — Plus (Positive Gradient)

Direct Access Number — F689

Parameter Type — **Selection List**

Factory Default — **Plus**

Changeable During Run — **Yes**

MON 1 Bias Adjustment

Program ⇒ Terminal ⇒ Analog Output Terminals

This parameter setting is used to ensure that a zero-level input signal produces a zero-level output at the **MON1** terminal.

Set the assigned function of parameter F672 to zero and then set this parameter to a zero output.

See parameter F672 for more information on this setting.

Direct Access Number — F690

Parameter Type — **Numerical**

Factory Default — **0.0**

Changeable During Run — **Yes**

Minimum — -10.0

Maximum — 100.0

Units — %

MON 2 Voltage/Current Output Switching

Program ⇒ Terminal ⇒ Analog Output Terminals

This parameter is used to set the output signal type of the **MON2** output terminal.

See parameter F674 for more information on this setting.

Settings

    0 — -10 V – +10 V
    1 — 0 – 10 V
    2 — 0 – 20 mA

Direct Access Number — F691

Parameter Type — **Selection List**

Factory Default — **0 – 10V**

Changeable During Run — **Yes**

MON 2 Output Gradient Characteristic

Program ⇒ Terminal ⇒ Analog Output Terminals

This parameter sets the output response polarity of the **MON2** output terminal. The **MON2** output terminal response may be set to respond inversely (-) or directly (+) to the input signal.

See parameter F672 for more information on this setting.

Settings:

    0 — Minus (Negative Gradient)
    1 — Plus (Positive Gradient)

Direct Access Number —   **F692**
Parameter Type — **Selection List**
Factory Default — **Plus**
Changeable During Run — **Yes**

MON 2 Bias Adjustment

Program ⇒ Terminal ⇒ Analog Output Terminals

This parameter setting is used to ensure that a zero-level input signal produces a zero-level output at the **MON2** terminal.

Set the assigned function of parameter F674 to zero and then set this parameter to a zero output.

See parameter F674 for more information on this setting.

Direct Access Number —   **F693**
Parameter Type — **Numerical**
Factory Default — **0.0**
Changeable During Run — **Yes**
Minimum — -10.0
Maximum — 100.0
Units — %

Parameter Write Lock Out

Program ⇒ Utilities ⇒ Prohibition

This parameter **Enables/Disables** the **Run** and **Stop** keys.

Settings:

    0 — Enabled
    1 — Disabled

Direct Access Number —   **F700**
Parameter Type — **Selection List**
Factory Default — **Enabled**
Changeable During Run — **Yes**

Display Units for Voltage and Current

Program ⇒ Utilities ⇒ Display Parameters

This parameter sets the unit of measurement for current and voltage values displayed on the EOI.

Settings:

    0 — %
    1 — A/V

Direct Access Number —   **F701**
Parameter Type — **Selection List**
Factory Default — %
Changeable During Run — **Yes**

Display Unit Multiplication Factor

Program ⇒ Utilities ⇒ Display Parameters

This parameter provides a multiplier for the displayed speed value shown on the EOI of the ASD.

This parameter may be used to display the rate that a commodity is being processed by the driven load in process units (i.e., units/time).

Example: *An output frequency of 100 Hz would be displayed as 50 Hz if using a multiplier of 0.5 for this parameter.*

Note: *PID frequency-limiting parameters are not affected by this setting (i.e., F364, F365, F367, and F368).*

Direct Access Number —   **F702**
Parameter Type — **Numerical**
Factory Default — **0.00 (OFF)**
Changeable During Run — **Yes**
Minimum — 0.00
Maximum — 200.00

Display Unit Selection

Program ⇒ Utilities ⇒ Display Parameters

This parameter is used in conjunction with F702 to set the method in which the frequency is displayed on the EOI.

The multiplier setting of F702 will be applied to the display of all frequencies if all frequencies are selected at this parameter.

The multiplier setting of F702 will be applied to parameters F364, F365, F367, and F368 ONLY if **PID Process Data** is selected at this parameter.

Settings:

    0 — All Frequencies
    1 — PID Process Data

Direct Access Number — F703
Parameter Type — **Selection List**
Factory Default — **All Frequencies**
Changeable During Run — **Yes**

Display Gradient Characteristic

Program ⇒ Utilities ⇒ Display Parameters

The ASD-displayed response to output speed changes will be displayed as directly proportional or inversely proportional as a function of this parameter setting.

Selecting **Negative Gradient** displays an increased output speed as going more negative.

Selecting **Positive Gradient** displays an increased output speed as going more positive.

Settings:

    0 — Minus (Negative Gradient)
    1 — Plus (Positive Gradient)

Direct Access Number — F705
Parameter Type — **Selection List**
Factory Default — **Plus**
Changeable During Run — **Yes**

Display Bias

Program ⇒ Utilities ⇒ Display Parameters

In conjunction with the setting of F702, this parameter sets the bias of the EOI speed display.

The frequency entered here will be multiplied by the setting of F702 and then displayed as the zero value on the EOI.

Direct Access Number — F706
Parameter Type — **Numerical**
Factory Default — **0.00**
Changeable During Run — **Yes**
Minimum — 0.00
Maximum — **Max. Freq.** (F011)
Units — Hz

Change Step Selection 1

Program ⇒ Utilities ⇒ Display Parameters

In conjunction with the parameter setting of F708, this parameter sets the amount that the output speed will increase or decrease for each speed command change entered from the EOI using the **Rotary Encoder**.

Direct Access Number — F707
Parameter Type — **Numerical**
Factory Default — **0.00**
Changeable During Run — **Yes**
Minimum — 0.00
Maximum — **Max. Freq.** (F011)
Units — Hz

Change Step Selection 2

Program ⇒ Utilities ⇒ Display Parameters

The parameter is used to modify the degree that the setting of F707 affects the output speed changes that are input from the EOI using the **Rotary Encoder**.

Selecting a zero value here disables this parameter and the resulting non-zero value of parameter setting F707 is output from the ASD.

Selecting a non-zero value here provides a dividend that will be used in the following equation resulting in the actual output frequency applied to the motor.

$$OutputFrequencyDisplayed = InternallyCommandedFrequency \times \frac{F708}{F707}$$

Direct Access Number — F708

Parameter Type — **Numerical**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 255

Operation Command Clear Selection When ST Off

Program ⇒ Special ⇒ Operation Panel Parameters

Upon deactivation of the **ST** terminal while operating in the **Local** mode, the ASD output to the motor will cease— this parameter setting is used to allow for the reactivation of the motor without user intervention upon the reactivation of the **ST** terminal.

Upon reactivation of the **ST** terminal in this condition the ASD will resume the Run condition and the motor will start (1 — Retain Run Command).

This feature may be **Disabled** and the Run command must be re-initiated by the user for ASD operation (0 — Clear Panel Run Command).

Direct Access Number — F719

Parameter Type — **Selection List**

Factory Default — **Retain Panel Run Command**

Changeable During Run — **Yes**

⚠ DANGER

WHEN ENABLED THE ASD WILL RESUME THE RUN CONDITION WHEN THE ST TERMINAL IS REACTIVATED.

Settings:

   0 — Clear Panel Run Command
   1 — Retain Panel Run Command

Panel Stop Pattern

Program ⇒ Special ⇒ Operation Panel Parameters

While operating in the **Local** mode this parameter determines the method used to stop the motor when the stop command is issued via the EOI.

The **Decel Stop** setting enables the **Dynamic Braking** system that is setup at F304 or the **DC Injection Braking** system that is setup at F250, F251, and F252.

The **Coast Stop** setting allows the motor to stop at the rate allowed by the inertia of the load.

Settings:

   0 — Deceleration Stop
   1 — Coast Stop

Note: *The **Stop Pattern** setting has no effect on the **Emergency Off** settings of F603. This parameter may also be accessed by pressing the **ESC** key from the **Frequency Command** screen.*

Direct Access Number — F721

Parameter Type — **Selection List**

Factory Default — **Deceleration Stop**

Changeable During Run — **Yes**

Panel Torque Command

Program ⇒ Special ⇒ Operation Panel Parameters

This function is not used with the H9 ASD.

The **Torque Command** selection is performed at F420.

Direct Access Number — F725

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **Yes**

Minimum — -250.00

Maximum — +250.00

Panel Tension Torque Bias

Program ⇒ Special ⇒ Operation Panel Parameters

This function is not used with the H9 ASD.

The **Tension Torque Bias** selection is performed at **F423.**

Direct Access Number — F727

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **Yes**

Minimum — -250.00

Maximum — +250.00

Units — %

Panel Load Sharing Gain

Program ⇒ Special ⇒ Operation Panel Parameters

This function is not used with the H9 ASD.

The **Load Sharing Gain** selection is performed at F424.

Direct Access Number — F728

Parameter Type — **Numerical**

Factory Default — **100.00**

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — 250.00

Units — %

Panel Override Multiplication Gain

Program ⇒ Special ⇒ Operation Panel Parameters

This parameter provides a value to be used in the event that **Setting** (F729) is selected for the **Frequency Override Multiplying Input** (F661).

Direct Access Number — F729

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **Yes**

Minimum — -100.00

Maximum — 100.00

Units — %

Panel Frequency Lock Out

Program ⇒ Special ⇒ Operation Panel Parameters

This parameter is model-specific and has no function on the H9 ASD system.

Settings:

   0 — Unlocked
   1 — Locked

Direct Access Number — F730

Parameter Type — **Selection List**

Factory Default — **Unlocked**

Changeable During Run — **Yes**

Panel Emergency Off Lock Out

Program ⇒ Special ⇒ Operation Panel Parameters

This parameter is model-specific and has no function on the H9 ASD system.

Settings:

   0 — Unlocked
   1 — Locked

Direct Access Number — F734

Parameter Type — **Selection List**

Factory Default — **Unlocked**

Changeable During Run — **No**

Panel Reset Lock Out

Program ⇒ Special ⇒ Operation Panel Parameters

This parameter is model-specific and has no function on the H9 ASD system.

Settings:

   0 — Unlocked
   1 — Locked

Direct Access Number — **F735**

Parameter Type — **Selection List**

Factory Default — **Unlocked**

Changeable During Run — **Yes**

Command Mode/Frequency Mode Change Lock Out

Program ⇒ Utilities ⇒ Prohibition

This parameter is model-specific and has no function on the H9 ASD system.

Settings:

   0 — Unlocked
   1 — Locked

Direct Access Number — **F736**

Parameter Type — **Selection List**

Factory Default — **Locked**

Changeable During Run — **Yes**

Lock Out All Keys

Program ⇒ Utilities ⇒ Prohibition

This parameter is model-specific and has no function on the H9 ASD system.

Settings:

   0 — Unlocked
   1 — Locked

Direct Access Number — **F737**

Parameter Type — **Selection List**

Factory Default — **Unlocked**

Changeable During Run — **Yes**

Trace Selection

Program ⇒ Utilities ⇒ Trace

In conjunction with parameter F741 – F745, this parameter is used to monitor and store 4 ASD output waveform data points. The data may be read and stored as a function of a trip (At Trip) or it may be initiated by the activation of a discrete terminal activation (At Trigger).

Set a discrete input terminal to **Trace Back Trigger Signal** and activate the terminal to initiate the **At Trigger** read/store function.

Table 9 on pg. 240 lists the items that may be selected for the data read/store function along with the associated communication number for each selection.

The duration of the read/store cycle for the selected items is set at parameter F741.

To acquire and store the data a communications device and a PC are required. The H9 ASD supports the following communications protocols: RS485 (MODBUS-RTU) Toshiba Protocol, USB Toshiba Protocol, CC-Link, ProfiBus, and DeviceNet (Refer to the manual of each protocol type for more information).

Trace data may be viewed graphically via Program ⇒ Utilities ⇒ **View Trace Data**.

Settings:

   0 — None (Disabled)
   1 — At Trip
   2 — At Trigger

Direct Access Number — **F740**

Parameter Type — **Selection List**

Factory Default — **At Trip**

Changeable During Run — **Yes**

Trace Cycle

Program ⇒ Utilities ⇒ Trace

This parameter sets the record time for the **Trace Data** events selected at F742 – F745.

See F740 for more information on this parameter setting.

Settings:

    0 — 4 mS
    1 — 20 mS
    2 — 100 mS
    3 — 1 Second
    4 — 10 Seconds

Direct Access Number —　F741

Parameter Type — **Selection List**

Factory Default — **100 mS**

Changeable During Run — **Yes**

Trace Data 1

Program ⇒ Utilities ⇒ Trace

This parameter is used to select the **Trace Data 1** item from Table 9 on pg. 240 to be read and stored in accordance with the setup of parameters F740 and F741.

See F740 for more information on this parameter setting.

Direct Access Number —　F742

Parameter Type — **Selection List**

Factory Default — **Output Frequency**

Changeable During Run — **Yes**

Trace Data 2

Program ⇒ Utilities ⇒ Trace

This parameter is used to select the **Trace Data 2** item from Table 9 on pg. 240 to be read and stored in accordance with the setup of parameters F740 and F741.

See F740 for more information on this parameter setting.

Direct Access Number —　F743

Parameter Type — **Selection List**

Factory Default — **Freq. Reference**

Changeable During Run — **Yes**

Trace Data 3

Program ⇒ Utilities ⇒ Trace

This parameter is used to select the **Trace Data 3** item from Table 9 on pg. 240 to be read and stored in accordance with the setup of parameters F740 and F741.

See F740 for more information on this parameter setting.

Direct Access Number —　F744

Parameter Type — **Selection List**

Factory Default — **Output Current**

Changeable During Run — **Yes**

Trace Data 4

Program ⇒ Utilities ⇒ Trace

This parameter is used to select the **Trace Data 4** item from Table 9 on pg. 240 to be read and stored in accordance with the setup of parameters F740 and F741.

See F740 for more information on this parameter setting.

Direct Access Number —　F745

Parameter Type — **Selection List**

Factory Default — **DC Voltage**

Changeable During Run — **Yes**

Baud Rate (RS485 2-Wire)

Program ⇒ Communications ⇒ Communication Settings

This parameter plays a role in the setup of the communications network by establishing the **Baud Rate** of the communications link.

The communications network includes other ASDs and Host/Control computers that monitor the status of the ASD(s), transfers commands, and loads or modifies the parameter settings of the ASD.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Settings:

    0 — 9600
    1 — 19200
    2 — 38400

Direct Access Number — F800

Parameter Type — **Selection List**

Factory Default — **19200**

Changeable During Run — **Yes**

Units — bps

Parity (RS485 2- and 4-Wire)

Program ⇒ Communications ⇒ Communication Settings

This parameter plays a role in the setup of the communications network by establishing the **Parity** setting of the communications link.

The communications network includes other ASDs and Host/Control computers that monitor the status of the ASD(s), transfers commands, and loads or modifies the parameter settings of the ASD.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Settings:

    0 — No Parity
    1 — Even Parity
    2 — Odd Parity

Direct Access Number — F801

Parameter Type — **Selection List**

Factory Default — **Even Parity**

Changeable During Run — **Yes**

ASD Number

Program ⇒ Communications ⇒ Communication Settings

This parameter plays a role in the setup of the communications network by assigning an identification (ID) number to each ASD in the communications network.

The communications network includes other ASDs and Host/Control computers that monitor the status of the ASD(s), transfers commands, and loads or modifies the parameter settings of the ASD.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Direct Access Number — F802

Parameter Type — **Numerical**

Factory Default — **0**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 247

Communications Time-Out Time (RS485 2- and 4-wire)

Program ⇒ Communications ⇒ Communication Settings

This parameter plays a role in the setup of the communications network by setting the time that no activity may exist over the communications link before the link is severed (Time Out).

The communications network includes other ASDs and Host/Control computers that monitor the status of the ASD(s), transfers commands, and loads or modifies the parameter settings of the ASD.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Direct Access Number — F803

Parameter Type — **Numerical**

Factory Default — **0 (Off)**

Changeable During Run — **Yes**

Minimum — 0 (Off)

Maximum — 100

Units — Seconds

Communications Time-Out Action (RS485 2- and 4-wire)

Program ⇒ Communications ⇒ Communication Settings

This parameter plays a role in the setup of the communications network by determining the action to be taken in the event of a time-out (Time-Out Action).

The communications network includes other ASDs and Host/Control computers that monitor the status of the ASD(s), transfers commands, and loads or modifies the parameter settings of the drive.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Settings:

(Settings Are For 2-Wire/4-Wire)

    0 — No Action/No Action
    1 — Alarm/No Action
    2 — Trip/No Action
    3 — No Action/Alarm
    4 — Alarm/Alarm
    5 — Trip/Alarm
    6 — No Action/Trip
    7 — Alarm/Trip
    8 — Trip/Trip

Direct Access Number —   **F804**
Parameter Type — **Selection List**
Factory Default — **Trip/Trip**
Changeable During Run — **Yes**

Send Wait Time (RS485 2-wire)

Program ⇒ Communications ⇒ Communication Settings

This parameter sets the **RS485** (2-wire) response delay time.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Direct Access Number —   **F805**
Parameter Type — **Numerical**
Factory Default — **0.00**
Changeable During Run — **Yes**
Minimum — 0.00
Maximum — 2.00
Units — Seconds

ASD-to-ASD Communications (RS485 2-wire)

Program ⇒ Communications ⇒ Communication Settings

The function of this parameter is 2-fold:

1) In a Master/Follower configuration and while communicating via RS485 2-wire, this parameter sets the ASD as the Master or the Follower.

2) This parameter determines the function of the ASD while operating as the Master or the Follower. If operating as the Master ASD, an output parameter of the Master ASD is used to control the Follower ASDs and is set here.

If operating as a Follower ASD, the ASD response if an error is incurred is set here.

Note: *Select a Follower function here if F826 is configured as a **Master Output** controller for any other ASD in the system. Otherwise, an **EOI** failure will result.*

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Settings:

  0 — Follower (Decel Stop If Error Detected)
  1 — Follower (Continues Operation If Error Detected)
  2 — Follower (Emergency Off If Error Detected)
  3 — Master (Frequency Command)
  4 — Master (Output Frequency)
  5 — Master (Torque Reference)
  6 — Master (Torque Command)

Direct Access Number —   **F806**
Parameter Type — Selection List
Factory Default — Follower (Decel Stop)
Changeable During Run — Yes

RS485 2-Wire Protocol Selection

Program ⇒ Communications ⇒ Communication Reference Adjust

This parameter sets the **RS485** (2-wire) communications protocol.

Settings:

  0 — Toshiba
  1 — Modbus

Direct Access Number —   **F807**
Parameter Type — Selection List
Factory Default — Toshiba
Changeable During Run — Yes

Frequency Point Selection

Program ⇒ Communications ⇒ Communication Reference Adjust

This parameter is used to set the communications reference for scaling.

See F811 — F814 for more information on this setting.

Note: *Scaling the communications signal is not required for all applications.*

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Settings:

  0 — Disabled
  1 — RS485 (2-Wire — NOT USED)
  2 — RS485 (4-Wire)
  3 — Communication Card

Direct Access Number —   **F810**
Parameter Type — Selection List
Factory Default — Disabled
Changeable During Run — Yes

Point 1 Setting

Program ⇒ Communications ⇒ Communication Reference Adjust

When enabled at F810, this parameter is used to allow the user to set the gain and bias of the speed control input to the drive when the speed control signal is received via the source selected at F810.

Gain and Bias Settings

When operating in the **Speed Control** mode and using one of the control sources from **Settings** above, the settings that determine the gain and bias properties of the input signal are:

- **Communications Reference Speed Setpoint 1** (frequency) (F812),
- the communications input signal value that represents **Communications Reference Speed Setpoint 1** (frequency): F811,
- **Communications Reference Speed Setpoint 2** (frequency) (F814), and
- the communications input signal value that represents **Communications Reference Speed Setpoint 2** (frequency): F813.

Once set, as the input signal value changes, the output frequency of the drive will vary in accordance with the above settings.

This parameter sets the **Communications Reference** input value that represents **Communications Reference Speed Setpoint 1** (frequency). This value is entered as 0 to 100% of the **Communications Reference** input value range.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Direct Access Number — **F811**

Parameter Type — **Numerical**

Factory Default — **0**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 100

Units — %
Point 1 Frequency

Program ⇒ Communications ⇒ Communication Reference Adjust

This parameter is used to set the gain and bias of the **Communications Reference** speed control input.

See F811 for more information on this setting.

This parameter sets **Communications Reference Speed Setpoint 1**.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Direct Access Number — **F812**

Parameter Type — **Numerical**

Factory Default — **0.00**

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — **Max. Freq. (F011)**

Units — Hz

Point 2 Setting

Program ⇒ Communications ⇒ Communication Reference Adjust

This parameter is used to set the gain and bias of the **Communications Reference** speed control input.

See F811 for more information on this setting.

This parameter sets the **Communications Reference** input value that represents **Communications Reference Speed Setpoint 2** (frequency). This value is entered as 0 to 100% of the **Communications Reference** input value range.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Direct Access Number — **F813**

Parameter Type — **Numerical**

Factory Default — **100**

Changeable During Run — **Yes**

Minimum — 0

Maximum — 100

Units — %

Point 2 Frequency

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Reference Adjust

This parameter is used to set the gain and bias of the **Communications Reference** speed control input.

See F811 for more information on this setting.

This parameter sets the **Communications Reference Speed Setpoint 2**.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Direct Access Number — F814

Parameter Type — **Numerical**

Factory Default — **60.00**

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — **Max. Freq. (**F011**)**

Units — Hz

Baud Rate (RS485)

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings

This parameter sets the RSRS485 baud rate.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Settings:

    0 — 9600 bps
    1 — 19200 bps
    2 — 38400 bps

Direct Access Number — F820

Parameter Type — **Selection List**

Factory Default — **19200**

Changeable During Run — **Yes**

RS485 Send Wait Time (RS485)

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings

This parameter sets the **RS485** response delay time.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Direct Access Number — F825

Parameter Type — **Numerical**

Factory Default — 0.00

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — 2.00

Units — Seconds

ASD-to-ASD Communications (RS485)

Program ⇒ Communications ⇒ Communication Settings

The function of this parameter is 2-fold:

1) In a Master/Follower configuration and while communicating via RS485 4-wire, this parameter sets the ASD as the Master or the Follower.

2) This parameter determines the function of the ASD while operating as the Master or the Follower. If operating as the Master ASD, an output parameter of the Master ASD is used to control the Follower ASDs and is set here. If operating as a Follower ASD, the ASD response if an error is incurred is set here.

Note: *Select a Follower function here if F806 is configured as a **Master Output** controller for any other ASD in the system. Otherwise, an **EOI** failure will result.*

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Settings:

0 — Follower (Decel Stop if Error Detected)
1 — Follower (Continues Operation if Error Detected)
2 — Follower (Emergency Off if Error Detected)
3 — Master (Frequency Command)
4 — Master (Output Frequency)
5 — Master (Torque Reference)
6 — Master (Output Torque)

Direct Access Number — F826
Parameter Type — **Selection List**
Factory Default — **Follower (Decel Stop)**
Changeable During Run — **Yes**

RS485 Protocol Selection (TSB/ModBus)

Program ⇒ Communications ⇒ Communication Settings

This parameter sets the communications protocol for ASD-to-ASD communications.

Settings:

0 — Toshiba
1 — Modbus

Direct Access Number — F829
Parameter Type — **Selection List**
Factory Default — **Toshiba**
Changeable During Run — **Yes**

Communications Option (DeviceNet/Profibus) Setting 1

Program ⇒ Communications ⇒ Communication Settings

While using the DeviceNet/Profibus communications protocol, this parameter allows the user to select the read and write information communicated between the ASD and the Host.

Read information may include the ASD fault status, ASD speed, ASD MAC ID, etc. Write information may include Enable/Disable DeviceNet commands, Forward run, ACC/DEC command, etc.

See the **DeviceNet Option Instruction Manual** (P/N 58683) for more information on this parameter.

Settings:

0 – 7

Direct Access Number — F830
Parameter Type — **Selection List**
Factory Default — **0**
Changeable During Run — **Yes**

Communications Option (DeviceNet/Profibus) Setting 2

Program ⇒ Communications ⇒ Communication Settings

While using the DeviceNet/Profibus communications protocol, parameters
F831 – F836 allow the user to select the ASD memory location that holds the
Command/Frequency/Monitoring instructions to be applied to the ASD for
Communications Option Settings 2 – 7, respectively.

See the **DeviceNet Option Instruction Manual** (P/N 58683) for more
information on this parameter.

Settings:

   0 — Disabled
   1 — FA06 (ALCAN Command 1)
   2 — FA23 (ALCAN Command 2)
   3 — FA07 (ALCAN Frequency Command, 0.01 Hz)
   4 — FA33 (Torque Command, 0.01%)
   5 — FA50 (Terminal Output)
   6 — FA51 (Analog Output Data from Comm. [FM])
   7 — FA52 (Analog Output Data from Comm. [AM])
   8 — F601 (Stall Prevention Level, %)
   9 — F441 (Power Running Torque Limit 1 Level, 0.01%)
   10 — F443 (Regen. Braking Torque Limit 1 Level, 0.01%)
   11 — F460 (Speed Loop Proportional Gain)
   12 — F461 (Speed Loop Stabilization Coefficient)

Direct Access Number — **F831**
Parameter Type — **Selection List**
Factory Default — **0000h**
Changeable During Run — **Yes**

Communications Option (DeviceNet/Profibus) Setting 3

Program ⇒ Communications ⇒ Communication Settings

Same as F831. See F831 for information on this parameter

Direct Access Number — **F832**
Parameter Type — **Selection List**
Factory Default — **0000h**
Changeable During Run — **Yes**

Communications Option (DeviceNet/Profibus) Setting 4

Program ⇒ Communications ⇒ Communication Settings

Same as F831. See F831 for information on this parameter

Direct Access Number — **F833**
Parameter Type — **Selection List**
Factory Default — **0000h**
Changeable During Run — **Yes**

Communications Option (DeviceNet/Profibus) Setting 5

Program ⇒ Communications ⇒ Communication Settings

Same as F831. See F831 for information on this parameter

Direct Access Number — **F834**
Parameter Type — **Selection List**
Factory Default — **0000h**
Changeable During Run — **Yes**

Communications Option (DeviceNet/Profibus) Setting 6

Program ⇒ Communications ⇒ Communication Settings

Same as F831. See F831 for information on this parameter

Direct Access Number — **F835**
Parameter Type — **Selection List**
Factory Default — **0000h**
Changeable During Run — **Yes**

Communications Option (DeviceNet/Profibus) Setting 7

Program ⇒ Communications ⇒ Communication Settings

Same as F831. See F831 for information on this parameter

Direct Access Number — **F836**
Parameter Type — **Selection List**
Factory Default — **0000h**
Changeable During Run — **Yes**

Communications Option (DeviceNet/Profibus) Setting 8

Program ⇒ Communications ⇒ Communication Settings

While using the DeviceNet/Profibus communications protocol, parameters F841 – F846 allow the user to select the ASD memory location that holds the Command/Frequency/Monitoring instructions to be applied to the ASD for **Communications Option Settings 8 – 13**, respectively.

See the **DeviceNet Option Instruction Manual** (P/N 58683) for more information on this parameter.

Settings:

   0 — Disabled
   1 — FD01 (ASD Status 1)
   2 — FD00 (Output Frequency, 0.01 Hz)
   3 — FD03 (Output Current, 0.01%)
   4 — FD05 (Output Voltage, 0.01%)
   5 — FC91 (ASD Alarm)
   6 — FD22 (PID Feedback Value, 0.01 Hz)
   7 — FD06 (Input Terminal Status)
   8 — FD07 (Output Terminal Status)
   9 — FE36 (V/I)
  10 — FE35 (RR Input)
  11 — FE37 (RX Input)
  12 — FD04 (Input Voltage [DC Detection], 0.01%)
  13 — FD16 (Real-time Speed Feedback
  14 — FD18 (Torque, 0.01%)
  15 — FE60 (My Monitor)
  16 — FE61 (My Monitor)
  17 — FE62 (My Monitor)
  18 — FE63 (My Monitor)
  19 — F880 (Free Notes)
  20 — FD29 (Input Power, 0.01 kW)
  21 — FD30 (Output Power, 0.01 kW)
  22 — FE14 (Cumulative Operation Time, 0.01=1 Hour)
  23 — FE40 (FM Terminal Output Monitor)
  24 — FE41 (AM Terminal Output Monitor)

Direct Access Number —   **F841**
Parameter Type — **Selection List**
Factory Default — **0000h**
Changeable During Run — **Yes**

Communications Option (DeviceNet/Profibus) Setting 9

Program ⇒ Communications ⇒ Communication Settings

Same as F841. See F841 for information on this parameter.

Direct Access Number —   **F842**
Parameter Type — **Selection List**
Factory Default — **0000h**
Changeable During Run — **Yes**

Communications Option (DeviceNet/Profibus) Setting 10

Program ⇒ Communications ⇒ Communication Settings

Same as F841. See F841 for information on this parameter.

Direct Access Number —   **F843**
Parameter Type — **Selection List**
Factory Default — **0000h**
Changeable During Run — **Yes**

Communications Option (DeviceNet/Profibus) Setting 11

Program ⇒ Communications ⇒ Communication Settings

Same as F841. See F841 for information on this parameter.

Direct Access Number —   **F844**
Parameter Type — **Selection List**
Factory Default — **0000h**
Changeable During Run — **Yes**

Communications Option (DeviceNet/Profibus) Setting 12

Program ⇒ Communications ⇒ Communication Settings

Same as F841. See F841 for information on this parameter.

Direct Access Number — F845

Parameter Type — **Selection List**

Factory Default — **0000h**

Changeable During Run — **Yes**

Communications Option (DeviceNet/Profibus) Setting 13

Program ⇒ Communications ⇒ Communication Settings

Same as F841. See F841 for information on this parameter.

Direct Access Number — F846

Parameter Type — **Selection List**

Factory Default — **0000h**

Changeable During Run — **Yes**

Disconnection Detection Extended Time

Program ⇒ Communications ⇒ Communication Settings

This parameter is used to set the length of time that no communications activity may exist before the communications link is disconnected.

Direct Access Number — F850

Parameter Type — **Numerical**

Factory Default — 0.0

Changeable During Run — **Yes**

Minimum — 0.0

Maximum — 100.0

Units — Seconds

ASD Operation at Disconnect

Program ⇒ Communications ⇒ Communication Settings

This parameter is used to set the H9 ASD action to be carried out in the event of the loss of communications.

Settings:

    0 — Stop and Terminate Communication
    1 — Do Nothing (Continue Programmed Operation)
    2 — Deceleration Stop
    3 — Coast Stop
    4 — Emergency Off
    5 — Preset Speed (Setting of F852)

Direct Access Number — F851

Parameter Type — **Selection List**

Factory Default — **Stop and Terminate Communication**

Changeable During Run — **Yes**

Preset Speed Operation Selection

Program ⇒ Communications ⇒ Communication Settings

This parameter setting is used to set the **Preset Speed** selection to be used if **Preset Speed** is selected at parameter F851.

Settings:

    0 — Disabled
    1 – 15 — Preset Speed Number

Direct Access Number — F852

Parameter Type — **Selection List**

Factory Default — 0 (Disabled)

Changeable During Run — **Yes**

Communications Option Station Address Monitor

Program ⇒ Communications ⇒ Communication Settings

This parameter is used in the setup of the communications network by reading the Media Access Code (MAC) address of the ASD that is connected to a node of the communications system.

The MAC Address is set via DIP switches of the optional device.

See the **DeviceNet Option Instruction Manual** (P/N 58683) for more information on this parameter.

Direct Access Number — F853

Parameter Type — **Selection List**

Factory Default — 0 (Disabled)

Changeable During Run — **Yes**

Minimum — 0

Maximum — 255

Communications Option Speed Switch Monitor DeviceNet/ CC-Link

Program ⇒ Communications ⇒ Communication Settings

This parameter is used in the setup of the communications network by reading the hardware-specific settings of the option card being used with the ASD.

If using the **DEV002Z** Devicenet card, this parameter reads the hardware switch SW300 setting of the Devicenet card. SW300 sets the baud rate and the MAC address of the option card that is connected to a node of the communications system.

See the **DeviceNet Option Instruction Manual** (P/N 58683) for more information on this parameter or see the Instruction manual for the option being used with the H9 ASD.

Direct Access Number — **F854**

Parameter Type — **Hardware Selectable**

Factory Default — **Option-Specific**

Changeable During Run — **No**

Minimum — 0

Maximum — 255

Block Write Data 1

Program ⇒ Communications ⇒ Communication Settings

This parameter plays a role in the setup of the communications network by establishing the type of data to be written to the ASD of the communications link.

The communications network includes other ASDs and Host/Control computers that monitor the status of the ASD(s), transfers commands, and loads or modifies the parameter settings of the ASD.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Settings:

    0 — None
    1 — FA00 (Command 1)
    2 — FA20 (Command 2)
    3 — FA01 (Frequency)
    4 — FA50 (TB Output)
    5 — FA51 (Analog Output)

Direct Access Number — **F870**

Parameter Type — **Selection List**

Factory Default — **None**

Changeable During Run — **Yes**

Block Write Data 2

Program ⇒ Communications ⇒ Communication Settings

This parameter plays a role in the setup of the communications network by establishing the type of data to be written to the ASD of the communications link.

The communications network includes other ASDs and Host/Control computers that monitor the status of the ASD(s), transfers commands, and loads or modifies the parameter settings of the ASD.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Settings:

    0 — None
    1 — FA00 (Command 1)
    2 — FA20 (Command 2)
    3 — FA01 (Frequency)
    4 — FA50 (TB Output)
    5 — FA51 (Analog Output)

Direct Access Number — **F871**

Parameter Type — **Selection List**

Factory Default — **None**

Changeable During Run — **Yes**

Block Read Data 1

Program ⇒ Communications ⇒ Communication Settings

Direct Access Number — **F875**

Parameter Type — **Selection List**

Factory Default — 0 (None)

Changeable During Run — **Yes**

This parameter plays a role in the setup of the communications network by establishing the type of data to be read from the ASD using the communications link.

The communications network includes other ASDs and Host/Control computers that monitor the status of the ASD(s), transfers commands, and loads or modifies the parameter settings of the ASD.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Settings:

    0 — None
    1 — Status Information
    2 — Output Frequency
    3 — Output Current
    4 — Output Voltage
    5 — Alarm Information
    6 — PID Feedback Value
    7 — Input Terminal Status
    8 — Output Terminal Status
    9 — V/I
    10 — RR
    11 — RX
    12 — DC Voltage
    13 — PG Feedback
    14 — Torque
    15 — My Monitor 1
    16 — My Monitor 2
    17 — My Monitor 3
    18 — My Monitor 4
    19 — Free Memo

Block Read Data 2

Program ⇒ Communications ⇒ Communication Settings

Direct Access Number — **F876**

Parameter Type — **Selection List**

Factory Default — None

Changeable During Run — **Yes**

This parameter plays a role in the setup of the communications network by establishing the type of data to be read from the ASD of the communications link.

See parameter F875 for more information on this setting.

Block Read Data 3

Program ⇒ Communications ⇒ Communication Settings

Direct Access Number — **F877**

Parameter Type — **Selection List**

Factory Default — None

Changeable During Run — **Yes**

This parameter plays a role in the setup of the communications network by establishing the type of data to be read from the ASD of the communications link.

See parameter F875 for more information on this setting.

Block Read Data 4	Direct Access Number — **F878**
Program ⇒ Communications ⇒ Communication Settings	Parameter Type — **Selection List**
	Factory Default — None
This parameter plays a role in the setup of the communications network by establishing the type of data to be read from the ASD of the communications link.	Changeable During Run — **Yes**
See parameter F875 for more information on this setting.	

Block Read Data 5	Direct Access Number — **F879**
Program ⇒ Communications ⇒ Communication Settings	Parameter Type — **Selection List**
	Factory Default — None
This parameter plays a role in the setup of the communications network by establishing the type of data to be read from the ASD of the communications link.	Changeable During Run — **Yes**
See parameter F875 for more information on this setting.	

Free Notes	Direct Access Number — **F880**
Program ⇒ Communications ⇒ Communication Settings	Parameter Type — **Numerical**
	Factory Default — **0**
This is an unused parameter that has allocated memory space.	Changeable During Run — **Yes**
The space may be used at the discretion of the user. This space may be used to store information or a note to be transferred using communications.	Minimum — 0
	Maximum — 65534

Network Option Reset Settings	Direct Access Number — **F899**
Program ⇒ Communications ⇒ Communication Settings	Parameter Type — **Selection List**
	Factory Default — **Reset ASD only**
This parameter plays a role in the setup of the communications network by establishing the targets of a Reset command received via the communications link.	Changeable During Run — **Yes**
Settings:	
0 — Reset ASD only 1 — Reset Option Board and ASD	

Input Function Target 1	Direct Access Number — **F900**
Program ⇒ My Function ⇒ My Function Unit 1	Parameter Type — **Selection List**
	Factory Default — **0 (Disabled)**
This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 1** terminal.	Changeable During Run — **Yes**
This setting assigns the function of the programmable **Input Function Target 1** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.	
See F977 for more information on this parameter.	

Input Function Command 1	Direct Access Number — **F901**
Program ⇒ My Function ⇒ My Function Unit 1	Parameter Type — **Selection List**
	Factory Default — 0 (NOP)
This parameter is used to assign a user-selected logical operator to two user-selected **Input Function Target** variables, enable a counter/timer function, or perform a hold/reset function.	
Table 11 on pg. 243 lists the available selections. Their use and selection requirements are described in an example at F977.	

Input Function Target 2	**Direct Access Number — F902**
Program ⇒ My Function ⇒ My Function Unit 1	Parameter Type — **Selection List**
	Factory Default — **0 (Disabled)**
	Changeable During Run — **Yes**

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 2** terminal.

This setting assigns the function of the programmable **Input Function Target 2** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Input Function Command 2	**Direct Access Number — F903**
Program ⇒ My Function ⇒ My Function Unit 1	Parameter Type — **Selection List**
	Factory Default — 0 (NOP)

This parameter is used to assign a user-selected logical operator to two user-selected **Input Function Target** variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg. 243 lists the available selections. Their use and selection requirements are described in an example at F977.

Input Function Target 3	**Direct Access Number — F904**
Program ⇒ My Function ⇒ My Function Unit 1	Parameter Type — **Selection List**
	Factory Default — **0 (Disabled)**
	Changeable During Run — **Yes**

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 3** terminal.

This setting assigns the function of the programmable **Input Function Target 3** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Output Function Assigned	**Direct Access Number — F905**
Program ⇒ My Function ⇒ My Function Unit 1	Parameter Type — **Selection List**
	Factory Default — **0 (Disabled)**
	Changeable During Run — **Yes**

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the **Output Function Assigned** terminal.

This setting assigns the function of the programmable **Output Function Assigned** data location to one of the functions listed in the **Input Setting** field of Table 7 on pg. 238.

Settings:

   0 – 3099

See the **My Function Instruction Manual** (P/N E6581335) and F977 for more information on this parameter.

Input Function Target 1	**Direct Access Number —　F906**
Program ⇒ My Function ⇒ My Function Unit 2	Parameter Type — **Selection List**
	Factory Default — **0 (Disabled)**
This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 1** terminal.	Changeable During Run — **Yes**
This setting assigns the function of the programmable **Input Function Target 1** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.	
See F977 for more information on this parameter.	

Input Function Command 1	**Direct Access Number —　F907**
Program ⇒ My Function ⇒ My Function Unit 2	Parameter Type — **Selection List**
	Factory Default — 0 (NOP)
This parameter is used to assign a user-selected logical operator to two user-selected **Input Function Target** variables, enable a counter/timer function, or perform a hold/reset function.	
Table 11 on pg. 243 lists the available selections. Their use and selection requirements are described in an example at F977.	

Input Function Target 2	**Direct Access Number —　F908**
Program ⇒ My Function ⇒ My Function Unit 2	Parameter Type — **Selection List**
	Factory Default — **0 (Disabled)**
This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 2** terminal.	Changeable During Run — **Yes**
This setting assigns the function of the programmable **Input Function Target 2** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.	
See F977 for more information on this parameter.	

Input Function Command 2	**Direct Access Number —　F909**
Program ⇒ My Function ⇒ My Function Unit 2	Parameter Type — **Selection List**
	Factory Default — 0 (NOP)
This parameter is used to assign a user-selected logical operator to two user-selected **Input Function Target** variables, enable a counter/timer function, or perform a hold/reset function.	
Table 11 on pg. 243 lists the available selections. Their use and selection requirements are described in an example at F977.	

Input Function Target 3	**Direct Access Number —　F910**
Program ⇒ My Function ⇒ My Function Unit 2	Parameter Type — **Selection List**
	Factory Default — **0 (Disabled)**
This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 3** terminal.	Changeable During Run — **Yes**
This setting assigns the function of the programmable **Input Function Target 3** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.	
See F977 for more information on this parameter.	

Output Function Assigned

Program ⇒ My Function ⇒ My Function Unit 2

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the **Output Function Assigned** terminal.

This setting assigns the function of the programmable **Output Function Assigned** data location to one of the functions listed in the **Input Setting** field of Table 8 on pg. 239.

Settings:

    0 – 3099

See the **My Function Instruction Manual** (P/N E6581335) and F977 for more information on this parameter.

Direct Access Number —   F911

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Input Function Target 1

Program ⇒ My Function ⇒ My Function Unit 3

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 1** terminal.

This setting assigns the function of the programmable **Input Function Target 1** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Direct Access Number —   F912

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Input Function Command 1

Program ⇒ My Function ⇒ My Function Unit 3

This parameter is used to assign a user-selected logical operator to two user-selected **Input Function Target** variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg. 243 lists the available selections. Their use and selection requirements are described in an example at F977.

Direct Access Number —   F913

Parameter Type — **Selection List**

Factory Default — 0 (NOP)

Input Function Target 2

Program ⇒ My Function ⇒ My Function Unit 3

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 2** terminal.

This setting assigns the function of the programmable **Input Function Target 2** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Direct Access Number —   F914

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Input Function Command 2

Program ⇒ My Function ⇒ My Function Unit 3

This parameter is used to assign a user-selected logical operator to two user-selected **Input Function Target** variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg. 243 lists the available selections. Their use and selection requirements are described in an example at F977.

Direct Access Number —   F915

Parameter Type — **Selection List**

Factory Default — 0 (NOP)

Input Function Target 3

Program ⇒ My Function ⇒ My Function Unit 3

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 3** terminal.

This setting assigns the function of the programmable **Input Function Target 3** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Direct Access Number — **F916**

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Output Function Assigned

Program ⇒ My Function ⇒ My Function Unit 3

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the **Output Function Assigned** terminal.

This setting assigns the function of the programmable **Output Function Assigned** data location to one of the functions listed in the **Input Setting** field of Table 8 on pg. 239.

Settings:

    0 – 3099

See the **My Function Instruction Manual** (P/N E6581335) and F977 for more information on this parameter.

Direct Access Number — **F917**

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

My Function Percent Data 1

Program ⇒ My Function ⇒ My Function Data

This parameter is used to set the trigger threshold level of the analog signal of the **My Function Percent Data 1**.

The analog signal is selected using the **Input Setting** number from Table 8 on pg. 239.

Once the assigned output value reaches the threshold setting of this parameter the output value is transferred to **My Function Out 1**.

See the **My Function Instruction Manual** (P/N E6581335) and F977 for more information on this parameter.

Direct Access Number — **F918**

Parameter Type — **Numerical**

Factory Default — 0.00

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — 200.00

Units — %

My Function Percent Data 2

Program ⇒ My Function ⇒ My Function Data

This parameter is used to set the trigger threshold level of the analog signal of the **My Function Percent Data 2**.

The analog signal is selected using the **Input Setting** number from Table 8 on pg. 239.

Direct Access Number — **F919**

Parameter Type — **Numerical**

Factory Default — 0.00

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — 200.00

Units — %

My Function Percent Data 3	**Direct Access Number —　F920**
Program ⇒ My Function ⇒ My Function Data	Parameter Type — **Numerical**
	Factory Default — 0.00
This parameter is used to set the trigger threshold level of the analog signal of the **My Function Percent Data 3**.	Changeable During Run — **Yes**
	Minimum — 0.00
The analog signal is selected using the **Input Setting** number from Table 8 on pg. 239.	Maximum — 200.00
	Units — %

My Function Percent Data 4	**Direct Access Number —　F921**
Program ⇒ My Function ⇒ My Function Data	Parameter Type — **Numerical**
	Factory Default — 0.00
This parameter is used to set the trigger threshold level of the analog signal of the **My Function Percent Data 4**.	Changeable During Run — **Yes**
	Minimum — 0.00
The analog signal is selected using the **Input Setting** number from Table 8 on pg. 239.	Maximum — 200.00
	Units — %

My Function Percent Data 5	**Direct Access Number —　F922**
Program ⇒ My Function ⇒ My Function Data	Parameter Type — **Numerical**
	Factory Default — 0.00
This parameter is used to set the trigger threshold level of the analog signal of the **My Function Percent Data 5**.	Changeable During Run — **Yes**
	Minimum — 0.00
The analog signal is selected using the **Input Setting** number from Table 8 on pg. 239.	Maximum — 200.00
	Units — %

My Function Frequency Data 1	**Direct Access Number —　F923**
Program ⇒ My Function ⇒ My Function Data	Parameter Type — **Numerical**
	Factory Default — 0.00
This parameter is used to set the trigger threshold level of the analog signal of the **My Function Frequency Data 1**.	Changeable During Run — **Yes**
	Minimum — 0.00
The analog signal is selected using the **Input Setting** number from Table 8 on pg. 239.	Maximum — 200.00
	Units — %

My Function Frequency Data 2	**Direct Access Number —　F924**
Program ⇒ My Function ⇒ My Function Data	Parameter Type — **Numerical**
	Factory Default — 0.00
This parameter is used to set the trigger threshold level of the analog signal of the **My Function Frequency Data 2**.	Changeable During Run — **Yes**
	Minimum — 0.00
The analog signal is selected using the **Input Setting** number from Table 8 on pg. 239.	Maximum — 200.00
	Units — %

My Function Frequency Data 3	**Direct Access Number —　F925**
Program ⇒ My Function ⇒ My Function Data	Parameter Type — **Numerical**
	Factory Default — 0.00
This parameter is used to set the trigger threshold level of the analog signal of the **My Function Frequency Data 1**.	Changeable During Run — **Yes**
	Minimum — 0.00
The analog signal is selected using the **Input Setting** number from Table 8 on pg. 239.	Maximum — 200.00
	Units — %

My Function Frequency Data 4

Program ⇒ My Function ⇒ My Function Data

This parameter is used to set the trigger threshold level of the analog signal of the **My Function Frequency Data 4**.

The analog signal is selected using the **Input Setting** number from Table 8 on pg. 239.

Direct Access Number — F926

Parameter Type — **Numerical**

Factory Default — 0.00

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — 200.00

Units — %

My Function Frequency Data 5

Program ⇒ My Function ⇒ My Function Data

This parameter is used to set the trigger threshold level of the analog signal of the **My Function Frequency Data 5**.

The analog signal is selected using the **Input Setting** number from Table 8 on pg. 239.

Direct Access Number — F927

Parameter Type — **Numerical**

Factory Default — 0.00

Changeable During Run — **Yes**

Minimum — 0.00

Maximum — 200.00

Units — %

My Function Time Data 1

Program ⇒ My Function ⇒ My Function Data

This parameter is used to set the response delay of the **My Function Time Data 1** terminal.

The applied discrete input signal must be present at the input terminal of the H9 ASD for the time setting here for a system response.

Discrete terminal input activation that does not equal or exceed this setting will be ignored.

Direct Access Number — F928

Parameter Type — **Numerical**

Factory Default — 0.01

Changeable During Run — **Yes**

Minimum — 0.01

Maximum — 600.00

Units — Seconds

My Function Time Data 2

Program ⇒ My Function ⇒ My Function Data

This parameter is used to set the response delay of the **My Function Time Data 2** terminal.

The applied discrete input signal must be present at the input terminal of the H9 ASD for the time setting here for a system response.

Discrete terminal input activation that does not equal or exceed this setting will be ignored.

Direct Access Number — F929

Parameter Type — **Numerical**

Factory Default — 0.01

Changeable During Run — **Yes**

Minimum — 0.01

Maximum — 600.00

Units — Seconds

My Function Time Data 3

Program ⇒ My Function ⇒ My Function Data

This parameter is used to set the response delay of the **My Function Time Data 3** terminal.

The applied discrete input signal must be present at the input terminal of the H9 ASD for the time setting here for a system response.

Discrete terminal input activation that does not equal or exceed this setting will be ignored.

Direct Access Number — F930

Parameter Type — **Numerical**

Factory Default — 0.01

Changeable During Run — **Yes**

Minimum — 0.01

Maximum — 600.00

Units — Seconds

My Function Time Data 4	**Direct Access Number — F931**
Program ⇒ My Function ⇒ My Function Data	Parameter Type — **Numerical**
	Factory Default — 0.01
This parameter is used to set the response delay of the **My Function Time Data 4** terminal.	Changeable During Run — **Yes**
The applied discrete input signal must be present at the input terminal of the H9 ASD for the time setting here for a system response.	Minimum — 0.01
	Maximum — 600.00
Discrete terminal input activation that does not equal or exceed this setting will be ignored.	Units — Seconds

My Function Time Data 5	**Direct Access Number — F932**
Program ⇒ My Function ⇒ My Function Data	Parameter Type — **Numerical**
	Factory Default — 0.01
This parameter is used to set the response delay of the **My Function Time Data 5** terminal.	Changeable During Run — **Yes**
The applied discrete input signal must be present at the input terminal of the H9 ASD for the time setting here for a system response.	Minimum — 0.01
	Maximum — 600.00
Discrete terminal input activation that does not equal or exceed this setting will be ignored.	Units — Seconds

My Function Count Data 1	**Direct Access Number — F933**
Program ⇒ My Function ⇒ My Function Data	Parameter Type — **Numerical**
	Factory Default — 0
This parameter is used to set the pulse-count threshold value used to trigger the discrete output **COUNT1 (ON Timer)**.	Changeable During Run — **Yes**
COUNT1 (ON Timer) outputs a 1 upon reaching the threshold setting of this parameter.	Minimum — 0
	Maximum — 9999
	Units — Pulses

My Function Count Data 2	**Direct Access Number — F934**
Program ⇒ My Function ⇒ My Function Data	Parameter Type — **Numerical**
	Factory Default — 0
This parameter is used to set the pulse-count threshold value used to trigger the discrete output **COUNT2 (ON Timer)**.	Changeable During Run — **Yes**
COUNT2 (ON Timer) outputs a 1 upon reaching the threshold setting at this parameter.	Minimum — 0
	Maximum — 9999
	Units — Pulses

Input Function Target 1	**Direct Access Number — F935**
Program ⇒ My Function ⇒ My Function Unit 4	Parameter Type — **Selection List**
	Factory Default — **0 (Disabled)**
This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 1** terminal.	Changeable During Run — **Yes**

This setting assigns the function of the programmable **Input Function Target 1** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Input Function Command 1

Program ⇒ My Function ⇒ My Function Unit 4

This parameter is used to assign a user-selected logical operator to two user-selected **Input Function Target** variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg. 243 lists the available selections. Their use and selection requirements are described in an example at F977.

Direct Access Number — F936

Parameter Type — **Selection List**

Factory Default — 0 (NOP)

Input Function Target 2

Program ⇒ My Function ⇒ My Function Unit 4

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 2** terminal.

This setting assigns the function of the programmable **Input Function Target 2** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Direct Access Number — F937

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Input Function Command 2

Program ⇒ My Function ⇒ My Function Unit 4

This parameter is used to assign a user-selected logical operator to two user-selected **Input Function Target** variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg. 243 lists the available selections. Their use and selection requirements are described in an example at F977.

Direct Access Number — F938

Parameter Type — **Selection List**

Factory Default — 0 (NOP)

Input Function Target 3

Program ⇒ My Function ⇒ My Function Unit 4

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 3** terminal.

This setting assigns the function of the programmable **Input Function Target 3** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Direct Access Number — F939

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Output Function Assigned

Program ⇒ My Function ⇒ My Function Unit 4

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the **Output Function Assigned** terminal.

This setting assigns the function of the programmable **Output Function Assigned** data location to one of the functions listed in the **Input Setting** field of Table 8 on pg. 239.

Settings:

    0 – 3099

See the **My Function Instruction Manual** (P/N E6581335) and F977 for more information on this parameter.

Direct Access Number — F940

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Input Function Target 1

Program ⇒ My Function ⇒ My Function Unit 5

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 1** terminal.

This setting assigns the function of the programmable **Input Function Target 1** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Direct Access Number — F941

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Input Function Command 1

Program ⇒ My Function ⇒ My Function Unit 5

This parameter is used to assign a user-selected logical operator to two user-selected **Input Function Target** variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg. 243 lists the available selections. Their use and selection requirements are described in an example at F977.

Direct Access Number — F942

Parameter Type — **Selection List**

Factory Default — 0 (NOP)

Input Function Target 2

Program ⇒ My Function ⇒ My Function Unit 5

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 2** terminal.

This setting assigns the function of the programmable **Input Function Target 2** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Direct Access Number — F943

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Input Function Command 2

Program ⇒ My Function ⇒ My Function Unit 5

This parameter is used to assign a user-selected logical operator to two user-selected **Input Function Target** variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg. 243 lists the available selections. Their use and selection requirements are described in an example at F977.

Direct Access Number — F944

Parameter Type — **Selection List**

Factory Default — 0 (NOP)

Input Function Target 3

Program ⇒ My Function ⇒ My Function Unit 5

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 3** terminal.

This setting assigns the function of the programmable **Input Function Target 3** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Direct Access Number — F945

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Output Function Assigned

Program ⇒ My Function ⇒ My Function Unit 5

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the **Output Function Assigned** terminal.

This setting assigns the function of the programmable **Output Function Assigned** data location to one of the functions listed in the **Input Setting** field of Table 8 on pg. 239.

Settings:

  0 – 3099

See the **My Function Instruction Manual** (P/N E6581335) and F977 for more information on this parameter.

Direct Access Number — F946

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Input Function Target 1

Program ⇒ My Function ⇒ My Function Unit 6

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 1** terminal.

This setting assigns the function of the programmable **Input Function Target 1** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Direct Access Number — F947

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Input Function Command 1

Program ⇒ My Function ⇒ My Function Unit 6

This parameter is used to assign a user-selected logical operator to two user-selected **Input Function Target** variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg. 243 lists the available selections. Their use and selection requirements are described in an example at F977.

Direct Access Number — F948

Parameter Type — **Selection List**

Factory Default — 0 (NOP)

Input Function Target 2

Program ⇒ My Function ⇒ My Function Unit 6

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 2** terminal.

This setting assigns the function of the programmable **Input Function Target 2** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Direct Access Number — F949

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Input Function Command 2

Program ⇒ My Function ⇒ My Function Unit 6

This parameter is used to assign a user-selected logical operator to two user-selected **Input Function Target** variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg. 243 lists the available selections. Their use and selection requirements are described in an example at F977.

Direct Access Number — F950

Parameter Type — **Selection List**

Factory Default — 0 (NOP)

Input Function Target 3

Program ⇒ My Function ⇒ My Function Unit 6

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 3** terminal.

This setting assigns the function of the programmable **Input Function Target 3** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Direct Access Number —   F951

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Output Function Assigned

Program ⇒ My Function ⇒ My Function Unit 6

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the **Output Function Assigned** terminal.

This setting assigns the function of the programmable **Output Function Assigned** data location to one of the functions listed in the **Input Setting** field of Table 8 on pg. 239.

Settings:

    0 – 3099

See the **My Function Instruction Manual** (P/N E6581335) and F977 for more information on this parameter.

Direct Access Number —   F952

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Input Function Target 1

Program ⇒ My Function ⇒ My Function Unit 7

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 1** terminal.

This setting assigns the function of the programmable **Input Function Target 1** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Direct Access Number —   F953

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Input Function Command 1

Program ⇒ My Function ⇒ My Function Unit 7

This parameter is used to assign a user-selected logical operator to two user-selected **Input Function Target** variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg. 243 lists the available selections. Their use and selection requirements are described in an example at F977.

Direct Access Number —   F954

Parameter Type — **Selection List**

Factory Default — 0 (NOP)

Input Function Target 2

Program ⇒ My Function ⇒ My Function Unit 7

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 2** terminal.

This setting assigns the function of the programmable **Input Function Target 2** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Direct Access Number —   **F955**

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Input Function Command 2

Program ⇒ My Function ⇒ My Function Unit 7

This parameter is used to assign a user-selected logical operator to two user-selected **Input Function Target** variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg. 243 lists the available selections. Their use and selection requirements are described in an example at F977.

Direct Access Number —   **F956**

Parameter Type — **Selection List**

Factory Default — 0 (NOP)

Input Function Target 3

Program ⇒ My Function ⇒ My Function Unit 7

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Input Function Target 3** terminal.

This setting assigns the function of the programmable **Input Function Target 3** terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Direct Access Number —   **F957**

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Output Function Assigned

Program ⇒ My Function ⇒ My Function Unit 7

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the **Output Function Assigned** terminal.

This setting assigns the function of the programmable **Output Function Assigned** data location to one of the functions listed in the **Input Setting** field of Table 8 on pg. 239.

Settings:

    0 – 3099

See the **My Function Instruction Manual** (P/N E6581335) and F977 for more information on this parameter.

Direct Access Number —   **F958**

Parameter Type — **Selection List**

Factory Default — **0 (Disabled)**

Changeable During Run — **Yes**

Analog Input Function Target 11

Program ⇒ My Function ⇒ My Function Analog

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Analog Input Function Target 11** terminal.

The function selected at F961 may be adjusted using the input analog control signal selected here.

Settings:

    0 — Disabled (None)
    1 — V/I
    2 — RR
    3 — RX
    4 — Optional RX2+, RX2-
    5 — Optional V/I

Direct Access Number —   **F959**

Parameter Type — **Selection List**

Factory Default — 0 (Disabled)

Changeable During Run — **Yes**

Analog Function Assigned Object 11

Program ⇒ My Function ⇒ My Function Analog

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality to which the adjustment of F959 is applied.

Settings:

    0 — Disabled (None)
    1 — Acceleration Rate
    2 — Upper-Limit Frequency
    3 — Acceleration Multiplication Factor
    4 — Deceleration Multiplication Factor
    5 — Manual Torque Boost
    6 — Over-Current Stall (F601)
    7 — Thermal Protection
    8 — Speed Loop Proportional Gain (F460)
    9 — Drooping Gain (F320)
    10 — PID Proportional Gain (F362)

See the **My Function Instruction Manual** (P/N E6581335) for a complete description of the setup requirements and operational information of the **Analog Function Assigned Object** parameter.

Direct Access Number —   **F961**

Parameter Type — **Selection List**

Factory Default — 0 (Disabled)

Changeable During Run — **Yes**

Analog Input Function Target 21

Program ⇒ My Function ⇒ My Function Analog

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality of the programmable **Analog Input Function Target 21** terminal.

The function selected at F964 may be adjusted using the input analog control signal selected here.

Settings:

    0 — Disabled (None)
    1 — V/I
    2 — RR
    3 — RX
    4 — Optional RX2+, RX2-
    5 — Optional V/I

Direct Access Number —   **F962**

Parameter Type — **Selection List**

Factory Default — 0 (Disabled)

Changeable During Run — **Yes**

Analog Function Assigned Object 21

Program ⇒ My Function ⇒ My Function Analog

This parameter plays a role in the setup of the **My Function** feature by selecting the functionality to which the adjustment of F962 is applied.

Settings:

    0 — Disabled (None)
    1 — Acceleration Rate
    2 — Upper-Limit Frequency
    3 — Acceleration Multiplication Factor
    4 — Deceleration Multiplication Factor
    5 — Manual Torque Boost
    6 — Over-Current Stall (F601)
    7 — Thermal Protection
    8 — Speed Loop Proportional Gain (F460)
    9 — Drooping Gain (F320)
    10 — PID Proportional Gain (F362)

See the **My Function Instruction Manual** (P/N E6581335) for a complete description of the setup requirements and operational information of the **Analog Function Assigned Object** parameter.

Direct Access Number — **F964**

Parameter Type — **Selection List**

Factory Default — 0 (Disabled)

Changeable During Run — **Yes**

Monitor Output Function 11

Program ⇒ My Function ⇒ My Function Monitor

This parameter plays a role in the setup of the **My Function** feature by establishing the function that is to be recorded and output as the **Peak**, **Minimum**, or **Average** value as selected at parameter F966.

Select the **Monitor Display Input Setting** number from Table 10 on pg. 241 to output the corresponding function.

Use the Communication Number if operating using communications.

See the **My Function Instruction Manual** (P/N E6581335) for a complete description of the setup requirements and operational information of the **Monitor Output Function** parameter.

Direct Access Number — **F965**

Parameter Type — **Selection List**

Factory Default — 2000

Changeable During Run — **Yes**

Monitor Output Function Command 11

Program ⇒ My Function ⇒ My Function Monitor

This parameter plays a role in the setup of the **My Function** feature by allowing the user to select the **Peak**, **Minimum**, or **Normal** (Avg.) value of the parameter F965 selection to be recorded and output as a monitored function.

Settings:

    0 — Normal
    1 — Peak
    2 — Minimum

See the **My Function Instruction Manual** (P/N E6581335) for a complete description of the setup requirements and operational information of the **Monitor Output Function** parameter.

Direct Access Number — **F966**

Parameter Type — **Selection List**

Factory Default — Normal

Changeable During Run — **Yes**

Monitor Output Function 21

Program ⇒ My Function ⇒ My Function Monitor

This parameter plays a role in the setup of the **My Function** feature by establishing the function that is to be recorded and output as the **Peak**, **Minimum**, or **Average** value as selected at parameter F968.

Select the **Monitor Display Input Setting** number from Table 10 on pg. 241 to output the corresponding function.

Use the Communication Number if operating using communications.

See the **My Function Instruction Manual** (P/N E6581335) for a complete description of the setup requirements and operational information of the **Monitor Output Function** parameter.

Direct Access Number —   F967

Parameter Type — **Selection List**

Factory Default — 2000

Changeable During Run — **Yes**

Monitor Output Function Command 21

Program ⇒ My Function ⇒ My Function Monitor

This parameter plays a role in the setup of the **My Function** feature by allowing the user to select the **Peak**, **Minimum**, or **Normal** (Avg.) value of the parameter F967 selection to be recorded and output as a monitored function.

Settings:

> 0 — Normal
> 1 — Peak
> 2 — Minimum

See the **My Function Instruction Manual** (P/N E6581335) for a complete description of the setup requirements and operational information of the **Monitor Output Function** parameter.

Direct Access Number —   F968

Parameter Type — **Selection List**

Factory Default — Normal

Changeable During Run — **Yes**

Monitor Output Function 31

Program ⇒ My Function ⇒ My Function Monitor

This parameter plays a role in the setup of the **My Function** feature by establishing the function that is to be recorded and output as the **Peak**, **Minimum**, or **Average** value as selected at parameter F970.

Select the **Monitor Display Input Setting** number from Table 10 on pg. 241 to output the corresponding function.

Use the **Communication Number** if operating using communications.

See the **My Function Instruction Manual** (P/N E6581335) for a complete description of the setup requirements and operational information of the **Monitor Output Function** parameter.

Direct Access Number —   F969

Parameter Type — **Selection List**

Factory Default — 2000

Changeable During Run — **Yes**

Monitor Output Function Command 31

Program ⇒ My Function ⇒ My Function Monitor

This parameter plays a role in the setup of the **My Function** feature by allowing the user to select the **Peak**, **Minimum**, or **Normal** (Avg.) value of the parameter F969 selection to be recorded and output as a monitored function.

See the **My Function Instruction Manual** (P/N E6581335) for a complete description of the setup requirements and operational information of the **Monitor Output Function** parameter.

Settings:

　0 — Normal
　1 — Peak
　2 — Minimum

Direct Access Number —　F970

Parameter Type — **Selection List**

Factory Default — Normal

Changeable During Run — **Yes**

Monitor Output Function 41

Program ⇒ My Function ⇒ My Function Monitor

This parameter plays a role in the setup of the **My Function** feature by establishing the function that is to be recorded and output as the **Peak**, **Minimum**, or **Normal** (Avg.) value as selected at parameter F972.

Select the **Monitor Display Input Setting** number from Table 10 on pg. 241 to output the corresponding function.

Use the Communication Number if operating using communications.

See the **My Function Instruction Manual** (P/N E6581335) for a complete description of the setup requirements and operational information of the **Monitor Output Function** parameter.

Direct Access Number —　F971

Parameter Type — **Selection List**

Factory Default — 2000

Changeable During Run — **Yes**

Monitor Output Function Command 41

Program ⇒ My Function ⇒ My Function Monitor

This parameter plays a role in the setup of the **My Function** feature by allowing the user to select the **Peak**, **Minimum**, or **Normal** (Avg.) value of the parameter F971 selection to be recorded and output as a monitored function.

Settings:

　0 — Normal
　1 — Peak
　2 — Minimum

See the **My Function Instruction Manual** (P/N E6581335) for a complete description of the setup requirements and operational information of the **Monitor Output Function** parameter.

Direct Access Number —　F972

Parameter Type — **Selection List**

Factory Default — Normal

Changeable During Run — **Yes**

Virtual Input Terminal 1 Selection

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **Virtual Input Terminal 1**. As a virtual terminal, it exists only in memory and is considered to always be in its **True** (connected to CC) state.

It is often practical to assign a function to this terminal that the user desires to be maintained regardless of external conditions or operations.

This parameter sets the programmable **Virtual Input Terminal 1** terminal to one of the functions that are listed in Table 5 on pg. 234.

In addition, the input terminal must be specified as **Normally Open** or **Normally Closed**.

Direct Access Number —   F973

Parameter Type — **Selection List**

Factory Default — **Unassigned**

Changeable During Run — **No**

Virtual Input Terminal 2 Selection

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **Virtual Input Terminal 2**. As a virtual terminal, it exists only in memory and is considered to always be in its **True** (connected to CC) state.

It is often practical to assign a function to this terminal that the user desires to be maintained regardless of external conditions or operations.

This parameter sets the programmable **Virtual Input Terminal 2** terminal to one of the functions that are listed in Table 5 on pg. 234.

In addition, the input terminal must be specified as **Normally Open** or **Normally Closed**.

Direct Access Number —   F974

Parameter Type — **Selection List**

Factory Default — **Unassigned**

Changeable During Run — **No**

Virtual Input Terminal 3 Selection

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **Virtual Input Terminal 3**. As a virtual terminal, it exists only in memory and is considered to always be in its **True** (connected to CC) state.

It is often practical to assign a function to this terminal that the user desires to be maintained regardless of external conditions or operations.

This parameter sets the programmable **Virtual Input Terminal 3** terminal to one of the functions that are listed in Table 5 on pg. 234.

In addition, the input terminal must be specified as **Normally Open** or **Normally Closed**.

Direct Access Number —   F975

Parameter Type — **Selection List**

Factory Default — **Unassigned**

Changeable During Run — **No**

Virtual Input Terminal 4 Selection

Program ⇒ Terminal ⇒ Input Terminals

This parameter is used to set the functionality of the **Virtual Input Terminal 4**. As a virtual terminal, it exists only in memory and is considered to always be in its **True** (connected to CC) state.

It is often practical to assign a function to this terminal that the user desires to be maintained regardless of external conditions or operations.

This parameter sets the programmable **Virtual Input Terminal 4** terminal to one of the functions that are listed in Table 5 on pg. 234.

In addition, the input terminal must be specified as **Normally Open** or **Normally Closed**.

Direct Access Number —   F976

Parameter Type — **Selection List**

Factory Default — **Unassigned**

Changeable During Run — **No**

My Function Selection

Program ⇒ My Function

This parameter **Enables/Disables** the configured **My Function** feature of the H9 ASD.

Settings:

    0 — None (Disabled)
    1 — My Function with Terminal Board Signal (discrete terminal activation)
    2 — My Function Always On

My Function

The **My Function** feature is configured using the settings of F900 to F977 and is used to enhance the programmability of the H9 ASD by performing two programmable functions: 1) the Combined Terminal Function, and 2) Logic Operations.

Combined Terminal Function

Assigning more than one function to a discrete output terminal provides two advantages: it effectively expands the number of input terminals, and reduces the number of cables required to support the input/output functions (e.g., assigning ST and F to one terminal). Using **Virtual Terminals 1 – 4** (F973 – F976) are required to use this function.

In the example below, the **ST** terminal assignment and the **F** terminal assignment will be combined as one terminal to illustrate this feature. However, any two of the discrete output terminal assignments listed in Table 8 on pg. 239 may be combined in this manner.

Setup (Example)

1. Disable the **My Function** parameter at F977 to prevent the system from starting upon completion of the setup.

2. Assign the **ST** function to the **S1** terminal (F115).

3. Assign the **F** function to **Virtual Input Terminal 1** (F973).

4. Set **Input Function Target 1** to **5** (F900). This setting assigns **S1** as the control input terminal.

5. Set **Output Function Assigned** to **21** (F905). This setting is a command that writes the **F115** selection (S1) to **Virtual Input Terminal 1**, activating both.

6. Enable the **My Function** parameter at F977 by selecting **My Function Always On** or selecting **My Function With TB Signal**.

    If set to **My Function Always On**, the combination of **ST** and **F** are always On (both are connected to CC only during the S1 activation).

    If set to **My Function With TB Signal**, set a discrete input terminal to **My Function Run Signal** and connect it to **CC** to enable **My Function**. Connect **S1** to **CC** to activate the **ST+F** function. A disconnection at either terminal will terminate the **My Function** programming (discrete input terminal **My Function Run Signal** is Anded with discrete input terminal **S1**).

Connect **S1** to **CC** and the **F**-to-**CC** + the **ST**-to-**CC** functions will be carried out using only **S1**.

With the aforementioned setup completed, provide a **Frequency Command** (F004) and the motor will run at the commanded frequency.

Continued next page.

Direct Access Number —   **F977**

Parameter Type — **Selection List**

Factory Default — **None** (Disabled)

Changeable During Run — **No**

⚠ DANGER

This parameter must always be set to **None** at the start of the **My Function** setup and remain set to **None** until all of the **My Function** parameter settings have been confirmed as being correct.

If enabled for normal operation using settings **1** or **2**, the motor may start and engage the driven equipment unexpectedly upon receiving a **Run** signal during the **My Function** setup.

Combined Terminal Function (Cont.)

Output terminals may also be combined to produce one output response to multiple conditions using the computational operators of Table 11 on pg. 243. Assigning more than one function to a discrete output terminal provides two advantages: it effectively expands the number of input terminals, and reduces the number of cables required to support the input/output functions (e.g., assigning Low-Speed Detection and Low Current Detection to one output terminal). Using **Virtual Terminals 1 – 4** (F973 – F976) are required to use this function.

In the example below, the **Low-Speed Signal** (detection) terminal assignment and the **Low Current Detection** terminal assignment will be combined as one terminal output to illustrate this feature. However, any two of the discrete output terminal assignments may listed in Table 8 on pg. 239 may be combined in this manner.

Setup (example)

1. Disable the **My Function** parameter at F977 to prevent the system from starting upon completion of the setup.

2. From Program ⇒ Direct Access ⇒ Unknown Numbers, select **Enabled**.

3. Set the **OUT1** terminal (F130) to **My Function Output 1** (222).

4. Set **Input Function Target 1** (F900) to **1004** (Low-Speed Signal detection). See Table 8 on pg. 239 for a complete listing of available settings.

5. Set **Input Function Target 2** (F902) to **1026 (**Low Current Alarm**)**. See Table 8 on pg. 239 for a complete listing of available settings.

6. Set **Input Function Command 1** (F901) to **AND** (3). This setting assigns an operator to the **Input Function Target 1** and the **Input Function Target 2** settings.

7. Set **Output Function Assigned** (F905) to **1222**. This setting will transfer the results of the logical AND to **My Function Output 1** (OUT1).

8. Enable the **My Function** parameter at F977 by selecting **My Function Always On**.

With the aforementioned setup completed in the example, once the **Low-Speed Signal** AND the **Low Current Alarm** are active, the **OUT1** terminal is activated for the duration of the **Low-Speed/Low Current** condition.

See the **My Function Instruction Manual** (P/N E6581335) for a complete description of the setup requirements and operational information of the **My Function** parameter.

Direct Access Number —   F977

Parameter Type — **Selection List**

Factory Default — **None** (Disabled)

Changeable During Run — **No**

⚠ **DANGER**

This parameter must always be set to **None** at the start of the **My Function** setup and remain set to **None** until all of the **My Function** parameter settings have been confirmed as being correct.

If enabled for normal operation using settings **1** or **2**, the motor may start and engage the driven equipment unexpectedly upon receiving a **Run** signal during the **My Function** setup.

Traverse Selection

Program ⇒ Special ⇒ Traverse

This parameter setting is used in the setup of the **Traverse** control mode of operation and is used in conjunction with the discrete terminal activation of the **Traverse Permission Signal**.

This parameter is used to enable the **Traverse** function. The **Traverse** function is activated via the discrete input terminal (see Table 5 on pg. 234).

See the **Traverse Control Instruction Manual** (P/N 58693) for more information on this feature.

Settings:

    0 — Disabled
    1 — Enabled

Direct Access Number — F980

Parameter Type — **Selection List**

Factory Default — **Disabled**

Changeable During Run — **No**

Traverse Acceleration Time

Program ⇒ Special ⇒ Traverse

This parameter setting is used in the setup of the **Traverse** control mode of operation. This setting establishes the acceleration rate used during the **Traverse** function.

See the **Traverse Control Instruction Manual** (P/N 58693) for more information on this feature.

Direct Access Number — F981

Parameter Type — **Numerical**

Factory Default — **25.0**

Changeable During Run — **No**

Minimum — 0.1

Maximum — 120.0

Units — Seconds

Traverse Deceleration Time

Program ⇒ Special ⇒ Traverse

This parameter setting is used in the setup of the **Traverse** control mode of operation. This setting establishes the deceleration rate used during the **Traverse** function.

See the **Traverse Control Instruction Manual** (P/N 58693) for more information on this feature.

Direct Access Number — F982

Parameter Type — **Numerical**

Factory Default — **25.0**

Changeable During Run — **No**

Minimum — 0.1

Maximum — 120.0

Units — Seconds

Traverse Step

Program ⇒ Special ⇒ Traverse

This parameter setting is used in the setup of the **Traverse** control mode of operation. This setting is used as a multiplier to establish the amount that the frequency is increased or decreased while using the **Traverse** function.

See the **Traverse Control Instruction Manual** (P/N 58693) for more information on this feature.

Direct Access Number — F983

Parameter Type — **Numerical**

Factory Default — **10.0**

Changeable During Run — **No**

Minimum — 0.0

Maximum — 25.0

Units — %

Traverse Jump Step

Program ⇒ Special ⇒ Traverse

This parameter setting is used in the setup of the **Traverse** control mode of operation. This setting is used as a multiplier to establish the amount that the frequency is increased or decreased while using the **Traverse** function when a short burst of rapid speed change is required.

See the **Traverse Control Instruction Manual** (P/N 58693) for more information on this feature.

Direct Access Number — F984

Parameter Type — **Numerical**

Factory Default — **10.0**

Changeable During Run — **No**

Minimum — 0.0

Maximum — 50.0

Units — %

Table 5. Discrete Input Terminal Assignment Selections and Descriptions.

Sel. No. NO	Sel. No. NC	Terminal Selection Descriptions
0	1	**Unassigned** — No operation.
2	3	**Forward** — Provides a **Forward** run command.
4	5	**Reverse** — Provides a **Reverse** run command.
6	7	**Standby** — Enables the **Forward** and **Reverse** operation commands.
8	9	**Reset** — **Resets** the device and any active faults.
10	11	**Preset Speed 1** — **Preset Speed 1** is used as the **LSB** of the 4-bit nibble that is used to select a **Preset Speed**.
12	13	**Preset Speed 2** — **Preset Speed 2** is used as the second bit of the 4-bit nibble that is used to select a **Preset Speed**.
14	15	**Preset Speed 3** — **Preset Speed 3** is used as the third bit of the 4-bit nibble that is used to select a **Preset Speed**.
16	17	**Preset Speed 4** — **Preset Speed 4** is used as the **MSB** of the 4-bit nibble that is used to select a **Preset Speed**.
18	19	**Jog** — This terminal activates a **Jog** for the duration of the activation. The **Jog** settings may be configured at F260 – F262.
20	21	**Emergency Off** — Terminates the output signal from the drive and may apply a brake if so configured. The braking method may be selected at F603.
22	23	**DC Braking** — Upon activation the drive outputs a DC current that is injected into the windings of the motor to quickly brake the motor.

Accel/Decel Switching 1/Accel/Decel Switching 2 — Activating combinations of discrete input terminals **Accel/Decel Switching 1** and **2** allow for the selection of Accel/Decel profiles 1 – 4 as shown below.

See F504 for more information on this terminal setting.

Sel. No. NO	Sel. No. NC	A/D SW Terminal #1	A/D SW Terminal #2	A/D Profile Selection
24	25	0	0	1
		0	1	2
26	27	1	0	3
		1	1	4

1=Terminal Activated

The settings of the A/D selections 1 – 4 are performed at F009/F010, F500/F501, F510/F511, and F514/F515, respectively.

Accel/Decel profiles are comprised of the **Accel/Decel** settings, **Pattern**, and **Switching Frequency**.

V/f Switching 1/V/f Switching 2 — Activating combinations of discrete input terminals **V/f Switching 1** and **2** allow for the selection of a V/f switching profile as listed below.

Sel. No. NO	Sel. No. NC	V/f Switching Terminal #1	V/f Switching Terminal #2	V/f Selection
28	29	0	0	1
		0	1	2
		1	0	3
30	31	1	1	4

1=Terminal Activated

The 1 – 4 settings of the V/f Switching selections are performed at parameters F170 – F181.

Note: *NO/NC = Normally Open/Normally Closed.*

Table 5. (Continued) Discrete Input Terminal Assignment Selections and Descriptions.

Sel. No. NO	Sel. No. NC	Terminal Selection Descriptions
32	33	**Torque Limit Switching 1/Torque Limit Switching 2** — Activating combinations of discrete input terminals **Torque Limit Switching 1** and **2** allow for the selection of a torque limit switching profile as listed below.
34	35	<table><tr><th colspan="2">Torque Limit Switching Terminal</th><th rowspan="2">Torque Limit Selection</th></tr><tr><th>#1</th><th>#2</th></tr><tr><td>0</td><td>0</td><td>1</td></tr><tr><td>0</td><td>1</td><td>2</td></tr><tr><td>1</td><td>0</td><td>3</td></tr><tr><td>1</td><td>1</td><td>4</td></tr></table> 1=Terminal Activated — The 1 – 4 settings of the torque limit switching selections are performed at parameters F440 – F449.
36	37	**PID Off** — Turns off **PID** control.
38	39	**Pattern Operation Group 1** — Initiates the **Pattern 1 Pattern Run**.
40	41	**Pattern Operation Group 2** — Initiates the **Pattern 2 Pattern Run**.
42	43	**Pattern Operation Continuation** — Initiates a continuation of the last **Pattern Run** from its stopping point.
44	45	**Pattern Operation Trigger** — Initiates the first **Preset Speed** of a **Pattern Run** and initiates each subsequent enabled **Preset Speed** with continued activations.
46	47	**External Over-Heat** — Causes an **Over-Heat Trip** (OH).
48	49	**Local Priority** (cancels serial priority) — Overrides any serial control and returns the **Command** and **Frequency** control to the settings of F003 and F004.
50	51	**Hold** (3-Wire Stop) — Decelerates the motor to a stop.
52	53	**PID Differentiation/Integration Clear** — Clears the PID value.
54	55	**PID Forward/Reverse Switching** — Toggles the gradient characteristic of the feedback response of the **V/I** terminal during PID-controlled operation.
56	57	**Forced Continuous Operation** — Ignore PID control settings for the duration of activation.
58	59	**Specified Speed Operation** — Runs speed as commanded by the **Frequency Mode** setting.
60	61	**Dwell Signal** — Used in conjunction with the **Acceleration/Deceleration Suspend** function (F349) — suspends the Accel/Decel function for the duration of the activation.
62	63	**Power Failure Synchronized Signal —** Activates the **Synchronized Accel/Decel** function of the **Regenerative Power Ridethrough** feature. See F302 for more information on this terminal setting.
64	65	**My Function Run** — Activates the configured **My Function** feature. See F977 for more information on this parameter.
66	67	**Autotuning Signal** — Initiates the **Autotune** function. Set F400 to **Autotuning by Input Terminal Signal**.
68	69	**Speed Gain Switching** — Toggles the ASD operating mode from and to **Speed Control** and **Torque Control**. **Speed Control** operation references parameter settings F460 and F461. **Torque Control** operation references parameter settings F462 and F463.
70	71	**Servo Lock** — Holds the motor at 0 Hz until a **Run** command is received.
72	73	**Simple Positioning** — While operating in the **Positioning Control** mode, activation initiates the **Stop** command. See F381 for more information on this terminal setting.
74	75	**kWH Display Clear** — Clears the kWH meter display.
76	77	**Trace Back Trigger** — Initiates the data Read/Store function of the **Trace Selection** parameter. See F740 for more information on this feature.
78	79	**Light-Load High-Speed Disable** — Terminates the Light-Load High-Speed operation.

Note: *NO/NC = Normally Open/Normally Closed.*

Table 5. (Continued) Discrete Input Terminal Assignment Selections and Descriptions.

Sel. No. NO	Sel. No. NC	Terminal Selection Descriptions
86	87	**Binary Write** — Writes the status of the discrete input terminals to the control board during binary input speed control.
88	89	**UP/DOWN Frequency** (up) — Increases the speed of the motor for the duration of activation until reaching the **Upper-Limit** setting or increases the speed of the motor in steps (see F264 for more information on this feature).
90	91	**UP/DOWN Frequency** (down) — Decreases the speed of the motor for the duration of activation until reaching the **Lower-Limit** setting or decreases the speed of the motor in steps (see F264 for more information on this feature).
92	93	**UP/DOWN Frequency** (clear) — While operating in the **Up/Down Frequency** speed control mode this terminal initiates a 0 Hz output command. If operating with an activated **UP/DOWN Frequency** (up or down) terminal, the output goes to the **Lower-Limit** (F013) setting.
98	99	**Forward/Reverse** — This setting operates in conjunction with another terminal being set to the **Run/Stop** function. When configured to **Run** (**Run/Stop** to **CC**), the make or break of this connection to **CC** changes the direction of the motor.
100	101	**Run/Stop** — This terminal enables the motor to run when activated and disables the motor when deactivated.
102	103	**Commercial Power/ASD Switching** — Initiates the **ASD-to-Commercial Power** switching function. See parameter F354 for more information on this feature.
104	105	**Frequency Reference Priority Switching** — Toggles frequency control to and from the settings of F004 and F207.
106	107	**V/I Terminal Priority** — Assigns **Speed** control to the **V/I Terminal** and overrides the F004 setting.
108	109	**Command Terminal Board Priority** — Assigns **Command** control to the **Terminal Board** and overrides the F003 setting.
110	111	**Edit Enable** — Allows for the override of the lock out parameter setting (F700) allowing for parameter editing.
112	113	**Control Switching** — Toggles the system to and from the speed control and the torque control modes.
122	123	**Fast Deceleration** — Using dynamic braking (if enabled and supported), stops the motor at the fastest rate allowed by the load.
124	125	**Preliminary Excitation** — Applies an excitation current to the motor (holds shaft stationary) for the duration of the activation.
126	127	**Brake Request —** Initiates the brake release command. This setting requires that another discrete input terminal be set to **Brake Answerback Input** to complete the brake release command and to convey the status of the braking system to the user or to a dependent subsystem. Once the braking release function is initiated, the **Trouble Internal Timer** begins to count down (**Trouble Internal Timer** value is set at F630). Should the count-down timer expire before the brake releases or before the **Brake Answerback Input** is returned, fault **E-11** will occur. Otherwise, the brake releases the motor and normal motor operations resume. The **Braking Release** function is primarily used at startup; but, may be used when the brake is applied while the motor is running.
130	131	**Brake Answerback Input —** This setting is required when the **Braking Request** function is used. The function of this input terminal is to receive the returned the status of the braking system. The returned status is either **Released** or **Not Released**. If **Released** is returned within the time setting of F630, normal system function resumes. If **Not Released** is returned or if the F630 time setting times out before either signal is returned, then fault **E-11** occurs. The returned signal may also be used to notify the user or control a dependent subsystem.
134	135	**Traverse Permission Signal —** Enables/Disables the Traverse function. See parameter F980 for more information on this feature.
Note:		*NO/NC = Normally Open/Normally Closed.*

2021	FD21	3021	FE21	Excitation Current	0.01%
2022	FD22	3022	FE22	PID Feedback Value	0.01 Hz
2023	FD23	3023	FE23	Motor Overload Ratio	0.01%
2024	FD24	3024	FE24	ASD Overload Ratio	0.01%
2025	FD25	3025	FE25	DBR Overload Ratio	1%
2028	FD28	3028	FE28	DBR Load Ratio	1%
2029	FD29	3029	FE29	Input Power	0.01 kW
2030	FD30	3030	FE30	Output Power	0.01 kW
		3031	FE31	Pattern Operation Group Number	0.1
		3032	FE32	Pattern Operation Cycles Remaining	1
		3033	FE33	Pattern Operation Preset Speed Number	1
		3034	FE34	Pattern Operation Preset Speed Time Remaining	0.1
2050	FD50			Light-Load High-Speed Load Torque Monitor 1	0.01%
2051	FD51			Light-Load High-Speed Load Torque Monitor 2	0.01%
		3035	FE35	RR Input	1%
		3036	FE36	V/I Input	1%
		3037	FE37	RX Input *(See Note 2)*	1%
		3038	FE38	RX2 Option (AI1) Input *(See Note 2)*	1%
		3039	FE39	RX2 Option (AI1) Input	1%
		3040	FE40	FM Output	1
		3041	FE41	AM Output	1
Note 1: If no PG feedback is used an estimated speed value is displayed.					
Note 2: My Function cannot process negative values — A negative value is processed by **My Function** as an absolute value.					

Table 10. (Continued) **Input Function Target** Selections and the Associated Communications Number.

Input Setting/Communication Number				Function	Resolution/Unit
FM/AM/FP Input Setting	Comm. Number	Monitor Display Input Setting	Comm. Number		
3050	FE50			Communication Data Output 2	
3051	FE51			Communication Data Output 1	
3052	FE52			Communication Data Output 3	
3060	FE60			My Function Monitor 1 (Output of Unsigned Value)	
3061	FE61			My Function Monitor 2 (Output of Unsigned Value)	
3062	FE62			My Function Monitor 3 (Output of Signed Value)	
3063	FE63			My Function Monitor 4 (Output of Signed Value)	
		3066	FE66	Expansion I/O Card 1 CPU Version	
		3067	FE67	Expansion I/O Card 2 CPU Version	
		3076	FE76	Integral Input Power	0.01 kW
		3077	FE77	Integral Output Power	0.01 kW
		3084	FE84	16-Bit BIN/BCD Input Value	1

Table 11. My Function Operator Selections.

Input Function Command	Function Name	Function Description
My Function Computational Selections		
0	NOP (No Operation)	Disables the My Function feature.
1	ST	Execute data read/transfer.
2	STN	Execute inverted data read/transfer.
3	AND	Logical product of A AND B.
4	ANDN	Logical product of A AND $\overline{B}$.
5	OR	Logical sum of A OR B.
6	ORN	Logical sum of A OR $\overline{B}$.
7	EQ	Compares data — Outputs 1 if Equal; 0 if not Equal.
8	NE	Compares data — Outputs 0 if Equal; 1 if not Equal.
9	GT	Compares data — Outputs 1 if A>B; 0 if A≤B.
10	GE	Compares data — Outputs 1 if A≥B; 0 if A<B.
11	LT	Compares data — Outputs 1 if A<B; 0 if A≥B.
12	LE	Compares data — Outputs 1 if A≤B; 0 if A>B.
13	ASUB	Outputs absolute difference between A and B — |A–B|
14	ON (Timer)	Enables the On response time delay settings of **My Function Time Data 1 – 5** (F928 – F932) for **My Function Data**.
15	OFF (Timer)	Enables the Off response time delay settings of **My Function Time Data 1 – 5** (F928 – F932) for **My Function Data**.
16	COUNT1 (Timer)	Outputs a 1 upon reaching the pulse count setting of F933.
17	COUNT2 (Timer)	Outputs a 1 upon reaching the pulse count setting of F934.
18	HOLD	Outputs the peak output value since powering up or since the last reset.
19	SET	Sets data.
20	RESET	Resets data.

Alarms, Trips, and Troubleshooting

Alarms and Trips

This section lists the available user-notification codes of the EOI display and provides information that assists the user in the event that a **Fault** is incurred. The **User Notification** codes are displayed as an indication that a system function or system condition is active (i.e., ATN, DB, and DBON). The code is displayed on the EOI for the duration of the activation.

If a user setting or an H9 ASD parameter has been exceeded, or if a data transfer function produces an unexpected result, a condition that is referred to as a **Fault** is incurred.

An **Alarm** is an indication that a **Fault** is imminent if existing operating conditions continue unchanged. An **Alarm** may be associated with an output terminal to notify the operator of the condition remotely, close a contact, or engage a brake. At the least, an **Alarm** will cause an alarm code to appear on the EOI display. Table 13 lists the **Alarm** codes that may be displayed during operation of the H9 ASD.

In the event that the condition that caused the **Alarm** does not return to its normal operating level within a specified time, the ASD **Faults** and a **Trip** is incurred (**Fault** and **Trip** are sometimes used interchangeably).

A **Trip** is a safety feature (the result of a **Fault**) that disables the H9 ASD system and removes the 3-phase power to the motor in the event that a subsystem of the ASD is malfunctioning, or one or more of the variables listed below exceeds its normal range (time and/or magnitude).

- Current,
- Voltage,
- Speed,
- Temperature,
- Torque, or
- Load.

See Table 14 on pg. 248 for a listing of the potential **Trips** and the associated probable causes.

The operating conditions at the time of the trip may be used to help determine the cause of the trip. Listed below are operating conditions that may be used to assist the operator in correcting the problem or that the H9 ASD operator should be prepared to discuss when contacting the TIC Customer Support Center for assistance.

- What trip information is displayed?
- Is this a new installation?
- Has the system ever worked properly and what are the recent modifications (if any)?
- What is the ASD and Motor size?
- What is the CPU version and revision level?
- What is the EOI version?
- Does the ASD trip when accelerating, running, decelerating, or when not running?
- Does the ASD reach the commanded frequency?
- Does the ASD trip without the motor attached?
- Does ASD trip with an unloaded motor?

User Notification Codes

The **User Notification** codes appear in the top right corner of the **Frequency Command** screen while the associated function is active.

User Notification codes notify the user of active functions that are usually only momentary under normal conditions and are active for the duration of activation only. User notification events are not error conditions and only convey active system functions to the user.

Table 12. User Notification Codes.

LED	Function	Description
Atn	Autotune active	**Atn** indicates that the **Autotune** function is active.
dbOn	DC Braking	This code conveys the **DC Injection** function being carried out. The display shows **db** when braking and shows **dbOn** when the motor shaft stationary function is being carried out.

Alarms

Table 13 lists the alarm codes that may be displayed during operation of the H9 ASD. Each alarm code listed is accompanied by a description and a possible cause. In the event that the source of the malfunction cannot be determined, contact your TIC Sales Representative for further information on the condition and for an appropriate course of action.

The **Alarms** are listed in the top-down order that they are checked for activation. Only the first to be detected will be displayed on the **Frequency Command** screen.

Table 13. H9 ASD Alarms.

LED Screen	LCD Screen	Description	Possible Causes
CM1	Comm1 Error	Internal communications error.	• Improperly programmed ASD.
CM2	Comm2 Error	External communications error.	• Improper communications settings. • Improperly connected cables.
E	Emergency Off	Output signal from the ASD is terminated and a brake may be applied if so configured.	• Stop|Reset pressed twice at the EOI. • EOFF command received remotely. • ASD reset required.
MOFF	Main Under-Voltage	Under-voltage condition at the 3-phase AC input to the ASD.	• Low 3-phase commercial voltage.
OC	Over-Current	ASD output current greater than F601 setting.	• Defective IGBT (U, V, or W). • ASD output to the motor is connected incorrectly. • ASD output phase-to-phase short. • The ASD is starting into a spinning motor. • Motor/machine jammed. • Mechanical brake engaged while the ASD is starting or while running. • Accel/Decel time is too short. • Voltage Boost setting is too high. • Load fluctuations. • ASD operating at an elevated temperature.
*OH	Overheat	ASD ambient temperature excessive.	• ASD is operating at an elevated temperature. • ASD is too close to heat-generating equipment. • Cooling fan vent is obstructed (see Mounting the ASD on pg. 15). • Cooling fan is inoperative. • Internal thermistor is disconnected.
OJ	Timer	Run-time counter exceeded.	• **Type Reset** required; select **Clear run timer**.

* Reset ignored if active.

LED Screen	LCD Screen	Description	Possible Causes
*OLI	ASD Overload	Load requirement in excess of the capability of the ASD.	• The carrier frequency is too high. • An excessive load. • Acceleration time is too short. • DC damping rate is set too high. • The motor is starting into a spinning load after a momentary power failure. • The ASD is improperly matched to the application.
OLM	Motor Overload	Load requirement in excess of the capability of the motor.	• V/f parameter improperly set. • Motor is locked. • Continuous operation at low speed. • The load is in excess of what the motor can deliver.
*OLR	Resistor Overload	Excessive current at the **Dynamic Braking Resistor**.	• Deceleration time is too short. • DBR configuration improperly set.
*OP	Over-Voltage	DC bus voltage exceeds specifications.	• ASD attempting to start into a spinning motor after a momentary power loss. • Incoming commercial power is above the specified range. • Decel time is too short. • Voltage spikes at the 3-phase input; install inductive filter. • DBR required. • DBR resistance value is too high. • DBR function is turned off. • Over-Voltage Stall feature is turned off. • System is regenerating. • Load instability. • Disable the Ridethrough function (F302).
OT	Over-Torque	Torque requirement is in excess of the setting of F616 or F617 for a time longer than the setting of F618.	• ASD is not correctly matched to the application. • F616 or F617 setting is too low. • Obstructed load.
*POFF	Control Under-Voltage	Under-voltage condition at the 5, 15, or the 24 VDC supply.	• Defective Control board. • Excessive load on power supply. • Low input voltage.
PtSt	Reference Point	Two speed-reference frequency setpoint values are too close to each other.	• Two speed reference frequency setpoints are too close to each other (increase the difference).
UC	Under-Current	With the **Low-Current Trip** (F610) parameter enabled, the output current of the ASD is below the level defined at F611 and remains there for a time longer than the setting of F612.	• Output current too low.

* Reset ignored if active.

Trips/Faults

A **Trip** is an H9 ASD response to a **Fault** (though **Fault** and **Trip** are sometimes used interchangeably). A **Trip** is a safety feature that disables the ASD system in the event that a subsystem of the ASD is malfunctioning or a parameter setting has been exceeded.

Listed in Table 14 are the **Faults** that may result in a **Trip** and the possible causes. When a **Trip** is incurred the system displays the **Fault** screen. The **Fault** screen identifies the active **Fault**.

Table 14. H9 ASD Fault Listing.

LED Screen	LCD Screen	Possible Causes
E	Emergency Off	• Emergency Off command received via EOI or remotely.
E-10	Sink/Source Setting Error	• Improperly positioned **Sink/Source** jumper on the Terminal board or on an option device (see J100 at the Terminal PCB of the ASD). • **Sink/Source** configuration is incorrect.
E-11	Brake Sequence Response Error	• F630 is set to a non-zero value. • Braking sequence discrete input and output terminals are not setup properly.
E-12	Encoder Signal-Loss Error	• ASD is configured to receive a signal from a shaft-mounted encoder and no signal is being received while running. • Disconnection at the Encoder circuit. • Motor is stopped and is generating torque via torque limit control. • ASD is not configured properly.
E-13	Speed Error	• Result of a motor speed that is greater than the commanded speed when using an encoder for speed control. • Improper encoder connection or setup information. • Defective encoder.
E-17	Key Failure	• Same key input for 20 seconds or more.
E-18	Analog (Terminal) Input Loss	• V/I signal loss. • Terminal Board failure. • P24 over-current condition. • F633 setting is too high.
E-19	CPU Communication Error	• CPU data Transmit/Receive error.
E-20	V/f Control Error	• Torque processing error. • Make service call.
E-21	CPU Processing Error	• Software processed incorrectly. • Make service call.
E-22	Logic Input Voltage Error	• Incorrect voltage applied to the discrete input terminals.
E-23	Optional Expansion Input Terminal Board 1 Error	• Optional Expansion Input Terminal Board 1 is defective.
E-24	Optional Expansion Input Terminal Board 2 Error	• Optional Expansion Input Terminal Board 2 is defective.

LED Screen	LCD Screen	Possible Causes
E-25	Stop Positioning Retention Error	• Load movement while stopped. • F381 setting is too low. • Encoder malfunction. • Creep speed is too high.
E-26	CPU2 Fault	• CPU malfunction. • Control board malfunction.
E-50/E-51	Sink/Source Setting Error	• Improperly positioned **Sink/Source** jumper on the Terminal board or on an option device (see J100 at the Terminal PCB of the ASD). • **Sink/Source** configuration is incorrect.
EEP1	EEPROM Fault	• EEPROM write malfunction. • Make a service call.
EEP2/EEP3	EEPROM Read Error	• EEPROM read malfunction. • Make a service call.
EF1/EF2	(Earth) Ground Fault	• Ground fault at the motor. • Ground fault at the output of the ASD. • Current leakage to **Earth Ground**.
EPHI	Input Phase Failure	• 3-phase input to the ASD is low or missing at the R, S, or T input terminals.
EPHO	Output Phase Failure	• 3-phase output from the ASD is low or missing at the U, V, or W output terminals or at the input to the motor.
ERR2	RAM Fault	• Internal RAM malfunction. • Make a service call.
ERR3	ROM Fault	• Internal ROM malfunction. • Make a service call.
ERR4	CPU Fault	• CPU malfunction. • Control board malfunction. • Make a service call.
ERR5	Communication Error	• Communication time out error. • Communication malfunction. • Improper or loose connection. • Improper system settings.
ERR6	Gate Array Fault	• Main Gate Array is defective.
ERR7	Low -Current	• Improper Low- Current detection level settings at F609 – F612.
ERR8	Option Device Fault	• Check installation, connections, and option device manual.
ERR9	Flash Memory Fault	• Flash memory malfunction. • Make a service call.

LED Screen	LCD Screen	Possible Causes
ETN	Autotune Error	• **Autotune** readings that are significantly inconsistent with the configuration information. • A non-3-phase motor is being used. • Incorrect settings at F400 or F413. • Using a motor that has a significantly smaller rating than the ASD. • ASD output cabling is too small, too long, or is being housed in a cable tray with other cables that are producing an interfering EMF. • Motor is running during the **Autotune** function.
ETN1		• F402 adjustment required (Motor temperature is too high). • F410 adjustment required (Motor Constant 1 improperly set).
ETN2		• F412 adjustment required (Motor Constant 3 improperly set).
ETN3		• Autotune setting F400 is set to Auto Calculation and there is a problem with the Motor Constant readings.
ETYP	Typeform Error	• Firmware information (typeform) loaded into the **Gate Driver** board is inconsistent with the device in which the firmware is being used. • The **Gate Driver** board has been replaced. • The **Gate Driver** board is defective.
None	No Errors	• No active faults.
OC1	Over-Current During Acceleration	• Improper V/f setting. • Restart from a momentary power outage. • The ASD is starting into a rotating motor. • ASD/Motor not properly matched. • Phase-to-phase short (**U**, **V**, or **W**). • **Accel** time too short. • **Voltage Boost** setting is too high. • Motor/machine jammed. • Mechanical brake engaged while the ASD is running. • ASD current exceeds 340% of the rated FLA on ASDs that are 100 HP or less during acceleration. On ASDs that are greater than 100 HP, this fault occurs when the ASD current exceeds 320% of the rated FLA during acceleration.
OC1P	Overheat During Acceleration	• Cooling fan inoperative. • Ventilation openings are obstructed. • Internal thermistor is disconnected. • Acceleration time is too short. • Improper V/f setting. • ASD or the motor is improperly matched to the application.

LED Screen	LCD Screen	Possible Causes
OC2	Over-Current During Deceleration	• Phase-to-phase short (U, V, or W). • Deceleration time is too short. • Motor/machine jammed. • Mechanical brake engaged while the ASD is running. • ASD current exceeds 340% of the rated FLA on ASDs that are 100 HP or less during deceleration. On ASDs that are greater than 100 HP, it occurs when the ASD current exceeds 320% of the rated FLA during deceleration.
OC2P	Overheat During Deceleration	• Cooling fan inoperative. • Ventilation openings are obstructed. • Internal thermistor is disconnected. • Deceleration time is too short. • DC Injection current is too high. • ASD or the motor is improperly matched to the application.
OC3	Over-Current During Run	• Load fluctuations. • ASD is operating at an elevated temperature. • ASD current exceeds 340% of the rated FLA on ASDs that are 100 HP or less during a fixed-speed run or if during a fixed-speed run the ASD overheats. On ASDs that are greater than 100 HP, it occurs when the ASD current exceeds 320% of the rated FLA on a fixed-speed run.
OC3P	Overheat During Run	• Cooling fan inoperative. • Ventilation openings are obstructed. • Internal thermistor is disconnected. • Improper V/f setting. • ASD or the motor is improperly matched to the application.
OCA1 or **OCL**	U-Phase Over-Current	• Low impedance at the U lead of the ASD output.
OCA2 or **OCL**	V-Phase Over-Current	• Low impedance at the V lead of the ASD output.
OCA3 or **OCL**	W-Phase Over-Current	• Low impedance at the W lead of the ASD output.
OCR	Dynamic Braking Resistor Over-Current	• ASD inability to discharge the bus voltage during regeneration. • No dynamic braking resistor (DBR) installed. • Deceleration time is too short. • Improper DBR setup information. • Defective IGBT7 (or IGBT7 ckt.). • 3-phase input voltage is above specification.
OH	Overheat	• Cooling fan inoperative. • Ventilation openings are obstructed. • Internal thermistor is disconnected.
OH2	External Overheat	• Excessive-heat signature received at the **TB3 – TH1**(+) and **TH1**(-) terminals. See F637 for setup information.

LED Screen	LCD Screen	Possible Causes
OL1	ASD Overload	• Acceleration time is too short. • DC Injection current is too high. • Improper V/f setting. • Motor running during restart. • ASD or the motor is improperly matched to the application.
OL2	Motor Overload	• Improper V/f setting. • Motor is locked. • Continuous operation at low speed. • Load requirement exceeds ability of the motor. • Startup frequency setting adjustment required.
OLR	Dynamic Braking Resistor Overload	• Deceleration time is too short. • DBR setting adjustment required. • Over-Voltage Stall setting adjustment required.
OP1	Over-Voltage During Acceleration	• Motor running during restart.
OP2	Over-Voltage During Deceleration	• Deceleration time is too short. • DBR value is too high. • DBR required (DBR setup required). • Stall protection is disabled. • 3-phase input voltage is out of specification. • Input reactance required.
OP3	Over-Voltage During Run	• Load fluctuations. • 3-Phase input voltage out of specification. • DBR required (DBR setup required).
OT	Over-Torque	• A torque requirement by the load in excess of the setting of F616 or F617 for a time longer than the setting of F618. • The ASD is improperly matched to the application. • The load is obstructed.
SOUT	Step-Out (for PM Motor Only)	• Motor shaft is locked. • Output phase is open. • Operating a reciprocating load.
UP1	Main Power Under-Voltage	• Input 3-phase voltage is too low. • Momentary power failure longer than the time setting of F628.
UP2	Control Power Under-Voltage	• This fault is caused by an under-voltage condition at the 5, 15, or the 24 VDC supply. • 3-phase input voltage low.

Viewing Trip Information

In the event that the condition causing an **Alarm** does not return to the normal operating level within a specified time, the H9 ASD **Faults** and a **Trip** is incurred.

When a trip occurs, the resultant error information may be viewed either from the LED screen, LCD **Fault** screen (Table 14 on pg. 248), **Monitor** screen, or the Trip History screen (Program $\Rightarrow$ Utilities $\Rightarrow$ Trip History).

Trip Record at Monitor Screen

The at-trip condition of the last 4 incurred trips may be viewed at the **Monitor** screen. The **Monitor** screen displays the records of up to four trips and catalogs each trip as **Past Trip 1** through **Past Trip 4** (see pg. 44). Once reset (**Type Reset**), the trip records are erased. If no trips have occurred since being powered up or since the last reset, **None** is displayed for each trip record.

The **Monitor** screen at-trip record is erased when the H9 ASD is reset.

Note: *An improper H9 ASD setup may cause some trips — reset the ASD to the **Factory Default** settings before pursuing a systemic malfunction (Program $\Rightarrow$ Utilities $\Rightarrow$ Type Reset $\Rightarrow$ **Reset to Factory Settings**).*

Trip History

The **Trip History** screen records the system parameters for up to 20 trips. The recorded trips are numbered from zero to 19. Once the **Trip History** record reaches trip number 19, the oldest recorded trip will be deleted with each new record stored (first-in first-out). The **Trip #** field may be selected and scrolled through to view the recorded trip information for a given trip number. The monitored parameters are listed in Table 15 as **At-trip Recorded Parameters** (parameter readings at the time that the trip occurred).

In the event of a power loss or if the keypad has been removed from the ASD, the trip records and the real-time clock information are retained within the keypad for up to 4.5 years via Battery Backup.

Table 15. Trip History Record Parameters.

At-trip Recorded Parameters			
1) Trip Number	8) Frequency Reference	15) Feedback (1 sec.)	22) ASD Overload
2) Trip Type	9) Bus Voltage	16) Torque	23) DBR Overload
3) Time and Date	10) Discrete Input Status	17) Torque Reference	24) Motor Load
4) Frequency at Trip	11) OUT1/OUT2/FL Status	18) Torque Current	25) ASD Load
5) Output Current	12) Timer	19) Excitation Current	26) DBR Load
6) Output Voltage	13) Post Compensation Frequency	20) PID Value	27) Input Power
7) Direction	14) Feedback (inst.)	21) Motor Overload	28) Output Power
Trip records are comprised of the full list of monitored parameters (28).			

Clearing a Trip

Once the cause of the trip has been corrected, performing a Reset re-enables the H9 ASD for normal operation.

The record of a trip may also be cleared using either of the following methods:

- Cycling power (trip info may be saved via F602 if desired),
- Pressing the **Stop-Reset** key twice,
- Remotely via the communications channel,
- Momentarily connecting terminal **RES** to **CC** of the **Terminal Board**, or
- Via Program $\Rightarrow$ Utilities $\Rightarrow$ Type Reset $\Rightarrow$ **Clear Past Trip** (clears Monitor screen records only).

Enclosure and Conduit Plate Dimensions

The H9 ASD part numbering convention is shown below.

The enclosure dimensions for the available models (typeforms) are listed in Tables 16 and 17. The conduit plates referenced are shown in Figures 34, 35, and 36.

H9 Part Numbering Convention.

Cable/Terminal/Torque Specifications

Installation should conform to the **NEC** Article 110 (Requirements for Electrical Installations), all regulations of the Occupational Safety and Health Administration, and any other applicable national, regional, or industry codes and standards.

Note: *The following ratings are guidelines and shall not be the sole determining factor of the lug or wire size used with the H9 ASD. Application-specific applicables, wire insulation type, conductor material, and local and regional regulations are but a few of the considerations when selecting the actual lug and wire type to be used with the H9 ASD.*

Note: *Cable/Terminal specifications are based on the rated current of the H9 ASD and **Do Not** include the 10% Service Factor.*

Note: *Use only 75° C copper wire/cable for motor and power connections.*

For further installation information see the section titled .

Table 20. 230-Volt H9 ASD Cable/Terminal/Torque Specifications.

Model Number VT130H9U	MCP Rating (Amps)	Wire/Cable Size		Lug Size Range		Terminal Board	Torque	
		AWG or kcmil						
		Input/Output Power		Wire-Size/Lug-Capacity for Input/Output Power		TB1 – 4 Terminals	3Ø-Input	3Ø-Output
		Recommended	Maximum	3Ø-Input	3Ø-Output	In-Lbs./Nm

Note: *(*) Indicates that the item is one of a set of two parallel cables.*

Note: *(**) Indicates that the item is one of a set of three parallel cables.*

Dynamic Braking System Specifications

Thermal protection for the DBR circuit (see Figure 37. on pg. 267) or an input contactor that will open the 3-phase power input circuit (see Figure 38. on pg. 267) to the H9 ASD in the event that a DBR over-temperature condition occurs is a requirement. Should a DBR failure or a power source over-voltage condition occur, the DBR thermal protection circuitry will prevent hazardous DBR temperatures.

To use the **Dynamic Braking** function the following requirements must be met:

- **Enable** the DBR function,

- Select a **Resistance Value**, and

- Set the **Continuous Braking Wattage** value at F304, F308, and F309, respectively.

Set the **Braking Resistance Overload Time** at parameter F639 to establish how long the braking resistor is allowed to sustain the overload condition before a trip is incurred (the factory default setting is 5 seconds).

Light-duty and heavy-duty resistors vary from a few ohms to several hundred ohms. The appropriate resistance size will be typeform- and application-specific. Contact your TIC Sales Representative or the TIC Customer Support Center for more information on your specific DBR requirements.

Heavy-duty DBRs should be wired using the same gauge wire as the motor leads. Light-duty DBRs may use one wire size smaller (AWG or kcmil) than the motor leads.

Because the heat generated by the DBR will affect the cooling capacity of the heat sink, the resistor pack should be mounted above or to the side of the ASD — **Never below the ASD**. Maintain a minimum of six inches between the resistor pack and the ASD unit.

The total wire length from the ASD to the DBR should not exceed 10 feet.

The wiring from the ASD to the DBR should be twisted approximately two twists per foot throughout the length of the wire.

If EMI/RFI noise is of concern, the DBR wiring should be 3-core screened cable. The screen should connect to the ASD enclosure and the resistor enclosure.

CAUTION

Though the in-line DBR fuse and the thermal relay are designed into the system to prevent a catastrophic DBR over-current condition, they are both intended to be used as backup protection **ONLY**.

A proper typeform-specific and application-specific system setup that includes using the appropriate **Dynamic Braking Resistor** and **Overload** settings will be required.

Figure 37. Braking Resistor Circuit With a Thermal Fuse.
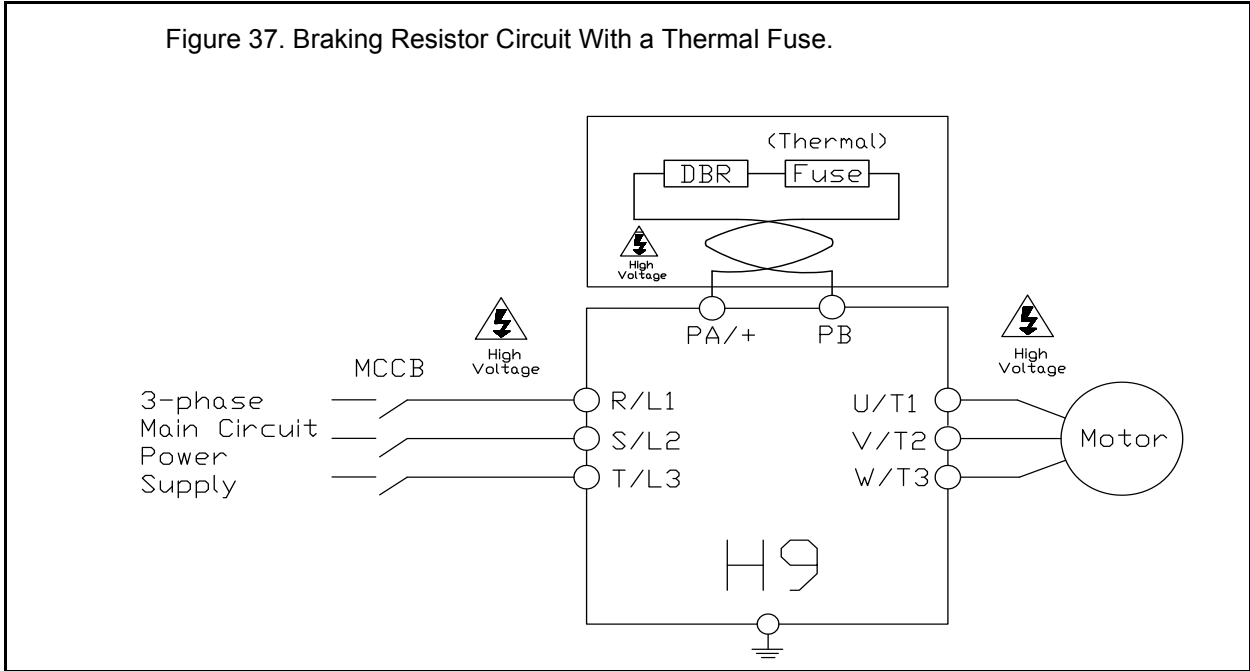

Figure 38. Shown below is the connection diagram using an MCCB with a Trip Coil (TC) in lieu of an input contactor. A control transformer is required for 400-volt models only. The primary MC is opened in the event of a DBR over-current detection. With no power supplied to the ASD the failure will not be displayed on the EOI; see the Trip History for failure information once restarted.
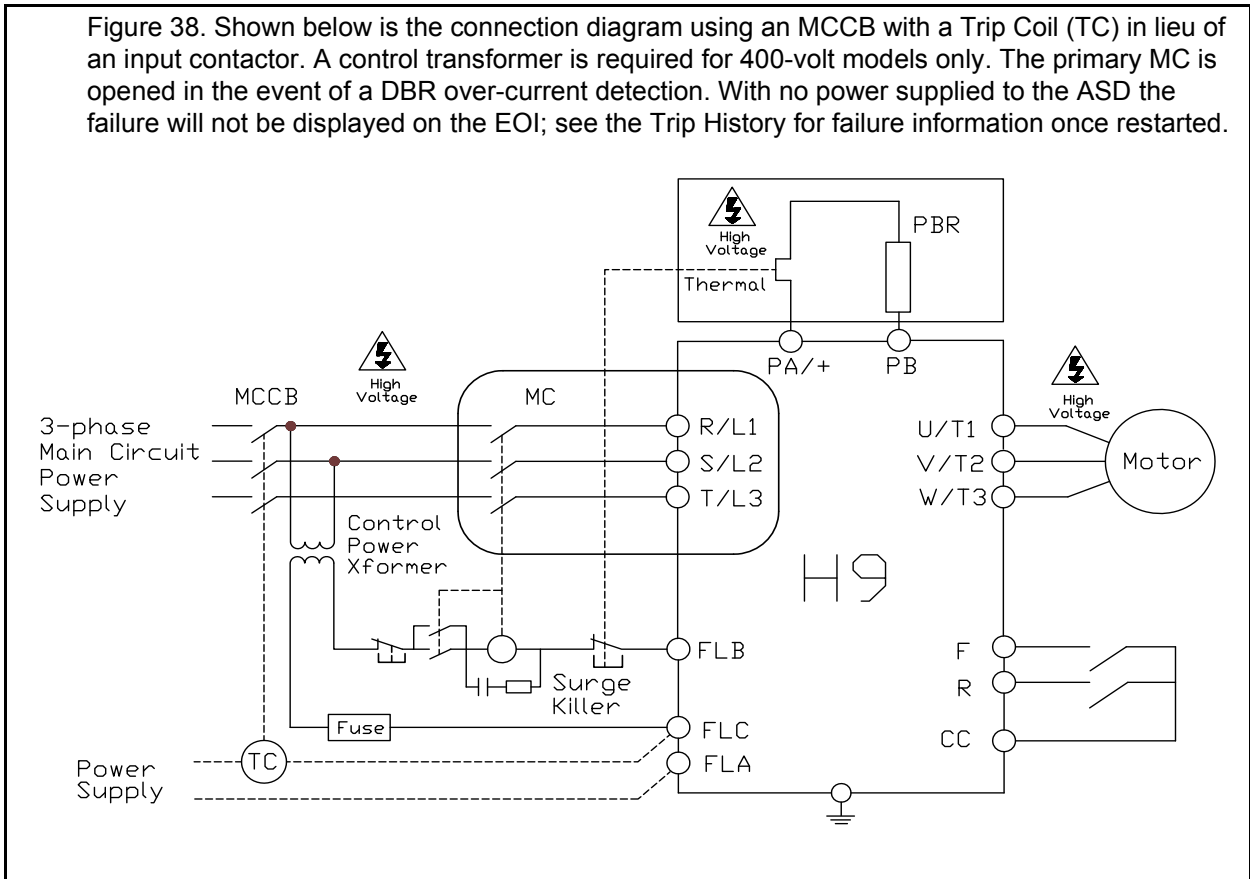

Short Circuit Protection Recommendations

H9 ASD Optional Devices

The ASD may be equipped with several options which are used to expand the functionality. Table 23 lists the available options and their functions.

Table 23. H9 Optional Devices and Functions.

Part Identifier	Device Name	Device Function
ASD-CAB-USB	H9 USB Communication Cable	Used to connect the ASD to a PC via the USB port of the PC.
ASD-EOI-HH-G9	Display Module Docking Station	Used to flash the 9-series display module.
ASD-MTG-KIT9	9-Series EOI Remote Mounting Kit	Hardware used to mount 9-series ASD EOI remotely.
ASD-TB1-SIM9	ASD Input/Output Signal Simulator	Used to simulate the ASD I/O monitor and control signals.
DEV002Z	DeviceNet Module	Allows the ASD to communicate via DeviceNet with other DeviceNet-supported equipment including a host computer.
ETB003Z	Expansion I/O Board 1	Expands the Input/Output functionality of the ASD.
ETB004Z	Expansion I/O Board 2	Expands the Input/Output functionality of the ASD.
PDP002Z	ProfiBus DP Module	Allows the ASD to communicate via ProfiBus with other ProfiBus-supported equipment including a host computer.
USB001Z	USB-to-Serial Converter	Allows for the USB port of a computer to be used as a communications port for monitoring and controlling the ASD.
VEC007Z	PG Vector Feedback Board	Allows for the use of Vector Control using a sensor (for use with a **5-volt** encoder).
VEC004Z	PG Vector Feedback Board	Allows for the use of Vector Control using a sensor (for use with a **12-volt** encoder).
VEC005Z	PG Vector Feedback Board	Allows for the use of Vector Control using a sensor (for use with a **15-volt** encoder).
VEC006Z	PG Vector Feedback Board	Allows for the use of Vector Control using a sensor (for use with a **24-volt** encoder).
Note:	*See the user manual of the applicable option for further information on each item.*
